- ▶ Atovaquone: metoclopramide reduces plasma concentration of **ATOVAQUONE**—avoid concomitant use
- Ciclosporin: metoclopramide increases plasma concentration of ● **CICLOSPORIN**
- ▶ Dopaminergics: metoclopramide antagonises hypoprolactinaemic effects of **BROMOCRIPTINE** and **CABERGOLINE**; metoclopramide antagonises antiparkinsonian effect of **PERGOLIDE**; avoidance of metoclopramide advised by manufacturer of **ROPINIROLE** and **ROTIHOTINE** (antagonism of effect)
- ▶ Muscle Relaxants: metoclopramide enhances effects of **SUXAMETHONIUM**
- ▶ Tetrabenazine: increased risk of extrapyramidal side-effects when metoclopramide given with **TETRABENAZINE**

**Metolazone** see Diuretics

**Metoprolol** see Beta-blockers

**Metronidazole**

- NOTE** Interactions do not apply to topical metronidazole preparations
- ▶ Alcohol: disulfiram-like reaction when metronidazole given with **ALCOHOL**
  - Anticoagulants: metronidazole enhances anticoagulant effect of ● **COUMARINS**
  - ▶ Antiepileptics: metronidazole possibly inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased plasma concentration); metabolism of metronidazole accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced effect)
  - Cytotoxics: metronidazole increases plasma concentration of ● **BUSULFAN** (increased risk of toxicity); metronidazole inhibits metabolism of **CAPCITABINE**, **FLUOROURACIL** and **TEGAFUR** (increased toxicity)
  - ▶ Disulfiram: psychotic reaction reported when metronidazole given with **DISULFIRAM**
  - ▶ Lithium: metronidazole increases risk of **LITHIUM** toxicity
  - ▶ Mycophenolate: metronidazole possibly reduces bioavailability of **MYCOPHENOLATE**
  - ▶ Ulcer-healing Drugs: metabolism of metronidazole inhibited by **CIMETIDINE** (increased plasma concentration)
  - ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Mianserin** see Antidepressants, Tricyclic (related)

**Micafungin**

- ▶ Antifungals: micafungin possibly increases plasma concentration of **AMPHOTERICIN**; micafungin increases plasma concentration of **ITRACONAZOLE** (consider reducing dose of itraconazole)
- ▶ Calcium-channel Blockers: micafungin increases plasma concentration of **NIFEDIPINE**
- ▶ Ciclosporin: micafungin possibly increases plasma concentration of **CICLOSPORIN**
- ▶ Sirolimus: micafungin increases plasma concentration of **SIROLIMUS**

**Miconazole** see Antifungals, Imidazole

**Midazolam** see Anxiolytics and Hypnotics

**Midodrine** see Sympathomimetics

**Mifamurtide**

- ▶ Analgesics: manufacturer of mifamurtide advises avoid concomitant use with high doses of **NSAIDS**
- ▶ Ciclosporin: manufacturer of mifamurtide advises avoid concomitant use with **CICLOSPORIN**
- ▶ Corticosteroids: manufacturer of mifamurtide advises avoid concomitant use with **CORTICOSTEROIDS**
- ▶ Tacrolimus: manufacturer of mifamurtide advises avoid concomitant use with **TACROLIMUS**

**Mifepristone**

- ▶ Corticosteroids: mifepristone may reduce effect of **CORTICOSTEROIDS** (including *inhaled* corticosteroids) for 3–4 days

**Milrinone** see Phosphodiesterase Inhibitors

**Minocycline** see Tetracyclines

**Minoxidil** see Vasodilator Antihypertensives

**Mirabegron**

- ▶ Antibacterials: avoid or reduce dose of mirabegron in hepatic or renal impairment when given with **CLARITHROMYCIN**—see Mirabegron, p. 715
- ▶ Antifungals: avoid or reduce dose of mirabegron in hepatic or renal impairment when given with **ITRACONAZOLE** and **KETOCONAZOLE**—see Mirabegron, p. 715
- ▶ Antivirals: avoid or reduce dose of mirabegron in hepatic or renal impairment when given with **RITONAVIR**—see Mirabegron, p. 715
- ▶ Beta-blockers: mirabegron increases plasma concentration of **METOPROLOL**
- ▶ Cardiac Glycosides: mirabegron increases plasma concentration of **DIGOXIN**—reduce initial dose of digoxin

**Mirtazapine**

- Alcohol: increased sedative effect when mirtazapine given with
  - **ALCOHOL**
- ▶ Analgesics: possible increased serotonergic effects when mirtazapine given with **TRAMADOL**
- ▶ Anticoagulants: mirtazapine enhances anticoagulant effect of **WARFARIN**
- Antidepressants: possible increased serotonergic effects when mirtazapine given with **FLUOXETINE**, **FLUVOXAMINE** or **VENLAFAXINE**; mirtazapine should not be started until 2 weeks after stopping ● **MAOIS**, also MAOIs should not be started until at least 2 weeks after stopping mirtazapine; after stopping mirtazapine do not start ● **MOCLOBEMIDE** for at least 1 week
- ▶ Antiepileptics: plasma concentration of mirtazapine reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**
- ▶ Antifungals: plasma concentration of mirtazapine increased by **KETOCONAZOLE**
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- ▶ Anxiolytics and Hypnotics: increased sedative effect when mirtazapine given with **ANXIOLYTICS AND HYPNOTICS**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- ▶ Clonidine: mirtazapine possibly antagonises hypotensive effect of **CLONIDINE**
- Methylthioninium: possible risk of CNS toxicity when mirtazapine given with ● **METHYLTIONINIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthioninium and observe patient for up to 4 hours after administration)
- ▶ Ulcer-healing Drugs: plasma concentration of mirtazapine increased by **CIMETIDINE**

**Misoprostol**

- ▶ Antacids: absorption of misoprostol possibly reduced by **ANTACIDS**

**Mitomycin**

- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

**Mitotane**

- Anticoagulants: mitotane possibly reduces anticoagulant effect of ● **COUMARINS**
- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Antivirals: avoidance of mitotane advised by manufacturer of **DASABUVIR**, **OMBITASVIR** and **PARITAPREVIR**
- ▶ Diuretics: manufacturer of mitotane advises avoid concomitant use of **SPIRONOLACTONE** (antagonism of effect)

**Mitoxantrone**

- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cispoperin: excretion of mitoxantrone reduced by **CICLOSPORIN** (increased plasma concentration)
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

**Mivacurium** see Muscle Relaxants**Mizolastine** see Antihistamines**MMR Vaccine** see Vaccines**Moclobemide**

- Analgesics: possible CNS excitation or depression (hypertension or hypotension) when moclobemide given with ● **DEXTRAMETHORPHAN** or ● **PETHIDINE**—avoid concomitant use; possible CNS excitation or depression (hypertension or hypotension) when moclobemide given with ● **OPIOID ANALGESICS**—manufacturer of moclobemide advises consider reducing dose of opioid analgesics
- Antidepressants: moclobemide should not be started for at least 1 week after stopping ● **MAOIS**, ● **SSRI-RELATED ANTIDEPRESSANTS**, ● **CITALOPRAM**, ● **FLUVOXAMINE**, ● **MIRTAZAPINE**, ● **PAROXETINE**, ● **SERTRALINE**, ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** or ● **TRICYCLICS**; increased risk of CNS toxicity when moclobemide given with ● **ESCITALOPRAM**, preferably avoid concomitant use; moclobemide should not be started until 5 weeks after stopping ● **FLUOXETINE**; possible increased serotonergic effects when moclobemide given with ● **DULOXETINE**; avoidance of moclobemide advised by manufacturer of ● **VORTIOXETINE**
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- Bupropion: avoidance of moclobemide advised by manufacturer of ● **BUPROPION**
- Clopidogrel: moclobemide possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
- Dopaminergics: increased risk of side-effects when moclobemide given with **CO-BENEDOPA**, **CO-CARELDOPA** or **LEVODOPA**; caution with moclobemide advised by manufacturer of **ENTACAPONE**; avoid concomitant use of moclobemide with ● **SELEGILINE**
- 5HT<sub>2</sub>-receptor Agonists: risk of CNS toxicity when moclobemide given with ● **RIZATRIPTAN** or ● **SUMATRIPTAN** (avoid rizatriptan or sumatriptan for 2 weeks after moclobemide); risk of CNS toxicity when moclobemide given with ● **ZOLMITRIPTAN** (reduce dose of zolmitriptan)
- Sympathomimetics: risk of hypertensive crisis when moclobemide given with ● **SYMPATHOMIMETICS**
- ▶ Ulcer-healing Drugs: plasma concentration of moclobemide increased by **CIMETIDINE** (halve dose of moclobemide)

**Modafinil**

- ▶ Antiepileptics: modafinil possibly increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Cispoperin: modafinil reduces plasma concentration of ● **CICLOSPORIN**
- Cytotoxics: modafinil possibly reduces plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid concomitant use
- Guanfacine: modafinil possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Oestrogens: modafinil accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)

**Moexipril** see ACE Inhibitors**Mometasone** see Corticosteroids**Monobactams** see Aztreonam**Monoclonal antibodies** see individual drugs**Montelukast** see Leukotriene Receptor Antagonists**Morphine** see Opioid Analgesics**Moxifloxacin** see Quinolones**Moxisylyte**

- ▶ ACE Inhibitors: enhanced hypotensive effect when moxisylyte given with **ACE INHIBITORS**
- ▶ Adrenergic Neuron Blockers: enhanced hypotensive effect when moxisylyte given with **ADRENERGIC NEURONE BLOCKERS**
- Alpha-blockers: possible severe postural hypotension when moxisylyte given with ● **ALPHA-BLOCKERS**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when moxisylyte given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Beta-blockers: possible severe postural hypotension when moxisylyte given with ● **BETA-BLOCKERS**

**Moxisylyte** (continued)

- ▶ Calcium-channel Blockers: enhanced hypotensive effect when moxisylyte given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when moxisylyte given with **CLONIDINE**
- ▶ Diazoxide: enhanced hypotensive effect when moxisylyte given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when moxisylyte given with **DIURETICS**
- ▶ Methyldopa: enhanced hypotensive effect when moxisylyte given with **METHYLDOPA**
- ▶ Moxonidine: enhanced hypotensive effect when moxisylyte given with **MOXONIDINE**
- ▶ Nitrates: enhanced hypotensive effect when moxisylyte given with **NITRATES**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when moxisylyte given with **HYDRALAZINE, MINOXIDIL** or **SODIUM NITROPRUSSIDE**

**Moxonidine**

- ▶ ACE Inhibitors: enhanced hypotensive effect when moxonidine given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when moxonidine given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alcohol: enhanced hypotensive effect when moxonidine given with **ALCOHOL**
- ▶ Aldesleukin: enhanced hypotensive effect when moxonidine given with **ALDESLEUKIN**
- ▶ Alpha-blockers: enhanced hypotensive effect when moxonidine given with **ALPHA-BLOCKERS**
- ▶ Anaesthetics, General: enhanced hypotensive effect when moxonidine given with **GENERAL ANAESTHETICS**
- ▶ Analgesics: hypotensive effect of moxonidine antagonised by **NSAIDs**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when moxonidine given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Antidepressants: enhanced hypotensive effect when moxonidine given with **MAOIs**; hypotensive effect of moxonidine possibly antagonised by **TRICYCLICS** (manufacturer of moxonidine advises avoid concomitant use)
- ▶ Antipsychotics: enhanced hypotensive effect when moxonidine given with **PHENOTHIAZINES**
- ▶ Anxiolytics and Hypnotics: enhanced hypotensive effect when moxonidine given with **ANXIOLYTICS AND HYPNOTICS**; sedative effects possibly increased when moxonidine given with **BENZODIAZEPINES**
- ▶ Beta-blockers: enhanced hypotensive effect when moxonidine given with **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when moxonidine given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when moxonidine given with **CLONIDINE**
- ▶ Corticosteroids: hypotensive effect of moxonidine antagonised by **CORTICOSTEROIDS**
- ▶ Diazoxide: enhanced hypotensive effect when moxonidine given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when moxonidine given with **DIURETICS**
- ▶ Dopaminergics: enhanced hypotensive effect when moxonidine given with **CO-BENELDOPA, CO-CARELDOPA** or **LEVODOPA**
- ▶ Methyldopa: enhanced hypotensive effect when moxonidine given with **METHYLDOPA**
- ▶ Moxisylyte: enhanced hypotensive effect when moxonidine given with **MOXISYLYTE**
- ▶ Muscle Relaxants: enhanced hypotensive effect when moxonidine given with **BACLOFEN** or **TIZANIDINE**
- ▶ Nitrates: enhanced hypotensive effect when moxonidine given with **NITRATES**
- ▶ Oestrogens: hypotensive effect of moxonidine antagonised by **OESTROGENS**
- ▶ Prostaglandins: enhanced hypotensive effect when moxonidine given with **ALPROSTADIL**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when moxonidine given with **HYDRALAZINE, MINOXIDIL** or **SODIUM NITROPRUSSIDE**

**Muscle Relaxants**

- ▶ ACE Inhibitors: enhanced hypotensive effect when baclofen or tizanidine given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when baclofen or tizanidine given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alcohol: increased sedative effect when baclofen, methocarbamol or tizanidine given with **ALCOHOL**
- ▶ Alpha-blockers: enhanced hypotensive effect when baclofen or tizanidine given with **ALPHA-BLOCKERS**
- Anaesthetics, General: effects of atracurium enhanced by **KETAMINE**; increased risk of myocardial depression and bradycardia when suxamethonium given with ● **PROPOFOL**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **VOLATILE LIQUID GENERAL ANAESTHETICS**
- ▶ Analgesics: excretion of baclofen possibly reduced by **NSAIDs** (increased risk of toxicity); excretion of baclofen reduced by **IBUPROFEN** (increased risk of toxicity); increased sedative effect when baclofen given with **FENTANYL** or **MORPHINE**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when baclofen or tizanidine given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Anti-arrhythmics: neuromuscular blockade enhanced and prolonged when suxamethonium given with **LIDOCAINE**
- Antibacterials: effects of non-depolarising muscle relaxants and suxamethonium enhanced by **PIPERACILLIN**; plasma concentration of tizanidine increased by ● **CIPROFLOXACIN** (increased risk of toxicity)—avoid concomitant use; plasma concentration of tizanidine possibly increased by **NORFLOXACIN** (increased risk of toxicity); plasma concentration of tizanidine possibly reduced by **RIFAMPICIN**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by ● **AMINOGLYCOSIDES**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by ● **CLINDAMYCIN**; effects of non-depolarising muscle relaxants and suxamethonium enhanced by ● **POLYMYXINS**; effects of suxamethonium enhanced by ● **VANCOMYCIN**
- Antidepressants: plasma concentration of tizanidine increased by ● **FLUVOXAMINE** (increased risk of toxicity)—avoid concomitant use; effects of suxamethonium enhanced by **PHENELZINE**; muscle relaxant effect of baclofen enhanced by **TRICYCLICS**
- Antiepileptics: muscle relaxant effect of non-depolarising muscle relaxants antagonised by **CARBAMAZEPINE** (accelerated recovery from neuromuscular blockade); effects of non-depolarising muscle relaxants reduced by *long-term* use of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (but effects of non-depolarising muscle relaxants might be increased by *acute* use of fosphenytoin and phenytoin)
- ▶ Antimalarials: effects of suxamethonium possibly enhanced by **QUININE**
- ▶ Antipsychotics: effects of suxamethonium possibly enhanced by **PROMAZINE**
- ▶ Anxiolytics and Hypnotics: increased sedative effect when baclofen or tizanidine given with **ANXIOLYTICS AND HYPNOTICS**
- ▶ Beta-blockers: enhanced hypotensive effect when baclofen given with **BETA-BLOCKERS**; possible enhanced hypotensive effect and bradycardia when tizanidine given with **BETA-BLOCKERS**; effects of muscle relaxants enhanced by **PROPRANOLOL**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when baclofen or tizanidine given with **CALCIUM-CHANNEL BLOCKERS**; effects of non-depolarising muscle relaxants possibly enhanced by **CALCIUM-CHANNEL BLOCKERS**; possible increased risk of ventricular arrhythmias when *intravenous* dantrolene given with **DILTIAZEM**—manufacturer of diltiazem advises avoid concomitant use; effects of non-depolarising muscle relaxants and suxamethonium enhanced by **VERAPAMIL**; avoidance of *intravenous* dantrolene advised by manufacturer of **VERAPAMIL**
- ▶ Cardiac Glycosides: possible increased risk of bradycardia when tizanidine given with **CARDIAC GLYCOSIDES**; risk of ventricular arrhythmias when suxamethonium given with **CARDIAC GLYCOSIDES**

**Muscle Relaxants** (continued)

- ▶ Clonidine: enhanced hypotensive effect when baclofen or tizanidine given with **CLONIDINE**
- ▶ Corticosteroids: effects of pancuronium and vecuronium possibly antagonised by **CORTICOSTEROIDS**
- ▶ Cytotoxics: effects of suxamethonium enhanced by **CYCLOPHOSPHAMIDE** and **THIOTEPA**
- ▶ Deferasirox: avoidance of tizanidine advised by manufacturer of **DEFERASIROX**
- ▶ Diazoxide: enhanced hypotensive effect when baclofen or tizanidine given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when baclofen or tizanidine given with **DIURETICS**
- ▶ Dopaminergics: possible agitation, confusion and hallucinations when baclofen given with **CO-BENELDOPA**, **CO-CARELDOPA** or **LEVODOPA**
- ▶ Lithium: effects of muscle relaxants enhanced by **LITHIUM**; baclofen possibly aggravates hyperkinesia caused by **LITHIUM**
- ▶ Magnesium (parenteral): effects of non-depolarising muscle relaxants and suxamethonium enhanced by **PARENTERAL MAGNESIUM**
- ▶ Memantine: effects of baclofen and dantrolene possibly modified by **MEMANTINE**
- ▶ Methyldopa: enhanced hypotensive effect when baclofen or tizanidine given with **METHYLDOPA**
- ▶ Metoclopramide: effects of suxamethonium enhanced by **METOCLOPRAMIDE**
- ▶ Moxonidine: enhanced hypotensive effect when baclofen or tizanidine given with **MOXONIDINE**
- ▶ Nitrates: enhanced hypotensive effect when baclofen or tizanidine given with **NITRATES**
- ▶ Oestrogens: plasma concentration of tizanidine possibly increased by **OESTROGENS** (increased risk of toxicity)
- ▶ Parasympathomimetics: effects of non-depolarising muscle relaxants possibly antagonised by **DONEPEZIL**; effects of suxamethonium possibly enhanced by **GALANTAMINE**, **NEOSTIGMINE**, **PYRIDOSTIGMINE** and **RVASTIGMINE**; effects of non-depolarising muscle relaxants antagonised by **NEOSTIGMINE**, **PYRIDOSTIGMINE** and **RVASTIGMINE**
- ▶ Progestogens: plasma concentration of tizanidine possibly increased by **PROGESTOGENS** (increased risk of toxicity)
- ▶ Sympathomimetics, Beta<sub>2</sub>: effects of suxamethonium enhanced by **BAMBUTEROL**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when baclofen or tizanidine given with **HYDRALAZINE**; enhanced hypotensive effect when baclofen or tizanidine given with **MINOXIDIL**; enhanced hypotensive effect when baclofen or tizanidine given with **SODIUM NITROPRUSSIDE**

**Muscle Relaxants, depolarising** see Muscle Relaxants**Muscle Relaxants, non-depolarising** see Muscle Relaxants**Mycophenolate**

- ▶ Antacids: absorption of mycophenolate reduced by **ANTACIDS**
- Antibacterials: bioavailability of mycophenolate possibly reduced by **METRONIDAZOLE** and **NORFLOXACIN**; plasma concentration of mycophenolate possibly reduced by **CO-AMOXYCLAV**; plasma concentration of active metabolite of mycophenolate reduced by ● **RIFAMPICIN**
- ▶ Antifungals: plasma concentration of mycophenolate increased by **ISAVUCONAZOLE**
- ▶ Antivirals: mycophenolate increases plasma concentration of **ACICLOVIR** and **VALACICLOVIR**, also plasma concentration of inactive metabolite of mycophenolate increased; mycophenolate possibly increases plasma concentration of **GANCICLOVIR** and **VALGANCICLOVIR**, also plasma concentration of inactive metabolite of mycophenolate possibly increased
- ▶ Iron Salts: absorption of mycophenolate reduced by *oral* **IRON SALTS**
- ▶ Lipid-regulating Drugs: absorption of mycophenolate reduced by **COLESTYRAMINE**
- ▶ Sevelamer: plasma concentration of mycophenolate possibly reduced by **SEVELAMER**

**Nabumetone** see NSAIDs**Nadolol** see Beta-blockers**Nalidixic Acid** see Quinolones**Nalmefene**

- Analgesics: manufacturer of nalmefene advises avoid concomitant use with ● **OPIOID ANALGESICS**

**Naloxegol**

- Antibacterials: plasma concentration of naloxegol possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—avoid concomitant use; plasma concentration of naloxegol reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antidepressants: plasma concentration of naloxegol possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of naloxegol possibly reduced by ● **CARBAMAZEPINE**—avoid concomitant use
- Antifungals: plasma concentration of naloxegol increased by ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of naloxegol possibly increased by ● **ITRACONAZOLE**—avoid concomitant use
- Antivirals: plasma concentration of naloxegol possibly increased by ● **INDINAVIR**, ● **RITONAVIR** and ● **SAQUINAVIR**—avoid concomitant use
- ▶ Calcium-channel Blockers: plasma concentration of naloxegol increased by **DILTIAZEM** (reduce dose of naloxegol—see under Naloxegol, p. 61); plasma concentration of naloxegol possibly increased by **VERAPAMIL** (reduce dose of naloxegol—see under Naloxegol, p. 61)
- Grapefruit Juice: plasma concentration of naloxegol possibly increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use

**Nandrolone** see Anabolic Steroids**Naproxen** see NSAIDs**Natriptan** see 5HT<sub>1</sub>-receptor Agonists (under HT)**Natalizumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Nateglinide** see Antidiabetics**Nebivolol** see Beta-blockers**Nefopam**

- Antidepressants: manufacturer of nefopam advises avoid concomitant use with ● **MAOIS**; side-effects possibly increased when nefopam given with **TRICYCLICS**
- ▶ Antimuscarinics: increased risk of antimuscarinic side-effects when nefopam given with **ANTIMUSCARINICS**

**Neomycin** see Aminoglycosides**Neostigmine** see Parasympathomimetics**Netupitant**

- ▶ Analgesics: manufacturer of netupitant advises caution with **MORPHINE**
- Antibacterials: netupitant increases plasma concentration of **ERYTHROMYCIN**; plasma concentration of netupitant reduced by ● **RIFAMPICIN**—avoid concomitant use
- ▶ Anticoagulants: manufacturer of netupitant advises caution with **DABIGATRAN**
- ▶ Antiepileptics: manufacturer of netupitant advises caution with **VALPROIC ACID**
- ▶ Antifungals: plasma concentration of netupitant possibly increased by **KETOCONAZOLE**
- ▶ Antivirals: manufacturer of netupitant advises caution with **ZIDOVUDINE**
- ▶ Anxiolytics and Hypnotics: netupitant increases plasma concentration of **MIDAZOLAM**
- ▶ Colchicine: manufacturer of netupitant advises caution with **COLCHICINE**
- Corticosteroids: netupitant increases plasma concentration of ● **DEXAMETHASONE** (halve dose of dexamethasone)
- ▶ Cytotoxics: netupitant increases plasma concentration of **DOCETAXEL** and **ETOPOSIDE**

**Nevirapine**

- ▶ Analgesics: nevirapine possibly reduces plasma concentration of **METHADONE**
- Antibacterials: nevirapine reduces plasma concentration of **CLARITHROMYCIN** (but concentration of an active metabolite increased), also plasma concentration of nevirapine increased; nevirapine possibly increases plasma concentration of **RIFABUTIN**; plasma concentration of nevirapine reduced by ● **RIFAMPICIN**—avoid concomitant use

**Nevirapine** (continued)

- Anticoagulants: nevirapine may enhance or reduce anticoagulant effect of ● **WARFARIN**
- Antidepressants: plasma concentration of nevirapine reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- ▶ Antiepileptics: plasma concentration of nevirapine reduced by **CARBAMAZEPINE**
- Antifungals: nevirapine reduces plasma concentration of ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of nevirapine increased by ● **FLUCONAZOLE**; nevirapine possibly reduces plasma concentration of **CASPOFUNGIN** and **ITRACONAZOLE**—consider increasing dose of caspofungin and itraconazole
- Antipsychotics: nevirapine possibly reduces plasma concentration of ● **ARIPIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature)
- Antivirals: nevirapine possibly reduces plasma concentration of ● **ATAZANAVIR** and ● **ETRAVIRINE**—avoid concomitant use; manufacturer of nevirapine advises avoid concomitant use with ● **BOCEPREVIR** and **RILPIVIRINE**; avoidance of nevirapine advised by manufacturer of **DACLATASVIR** (plasma concentration of daclatasvir possibly reduced); avoidance of nevirapine advised by manufacturer of **DASABUVIR**, **ELVITEGRAVIR**, **OMBITASVIR** and **PARITAPREVIR**; nevirapine possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); nevirapine reduces plasma concentration of ● **EFAVIREN2**—avoid concomitant use; nevirapine possibly reduces plasma concentration of **FOSAMPRENAVIR**—avoid unboosted fosamprenavir; nevirapine reduces plasma concentration of **INDINAVIR**; nevirapine possibly reduces plasma concentration of ● **LOPINAVIR** and **TELAPREVIR**—consider increasing dose of lopinavir and telaprevir; nevirapine possibly reduces plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; increased risk of granulocytopenia when nevirapine given with ● **ZIDOVUDINE**
- ▶ Cobicistat: manufacturer of nevirapine advises avoid concomitant use with **COBICISTAT**
- Cytotoxics: avoidance of nevirapine advised by manufacturer of ● **OLAPARIB**
- Guanfacine: nevirapine possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Oestrogens: nevirapine accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: absorption of nevirapine possibly reduced by ● **ORLISTAT**
- Progestogens: nevirapine accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)

**Nicardipine** see Calcium-channel Blockers

**Nicorandil**

- ▶ Alcohol: hypotensive effect of nicorandil possibly enhanced by **ALCOHOL**
- ▶ Analgesics: increased risk of gastro-intestinal bleeding and ulceration when nicorandil given with **NSAIDs** or **ASPIRIN**
- ▶ Antidepressants: enhanced hypotensive effect when nicorandil given with **MAOIs**; hypotensive effect of nicorandil possibly enhanced by **TRICYCLICS**
- Avanafil: hypotensive effect of nicorandil significantly enhanced by ● **AVANAFIL** (avoid concomitant use)
- ▶ Corticosteroids: increased risk of gastro-intestinal bleeding and ulceration when nicorandil given with **CORTICOSTEROIDS**
- Riociguat: possible enhanced hypotensive effect when nicorandil given with ● **RIOCIQUAT**—avoid concomitant use
- Sildenafil: hypotensive effect of nicorandil significantly enhanced by ● **SILDENAFIL** (avoid concomitant use)
- Tadalafil: hypotensive effect of nicorandil significantly enhanced by ● **TADALAFIL** (avoid concomitant use)
- Vardenafil: possible increased hypotensive effect when nicorandil given with ● **VARDENAFIL**—avoid concomitant use

**Nicorandil** (continued)

- ▶ Vasodilator Antihypertensives: possible enhanced hypotensive effect when nicorandil given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

**Nicotine**

- ▶ Anti-arrhythmics: nicotine possibly enhances effects of **ADENOSINE**

**Nicotinic Acid**

- Lipid-regulating Drugs: increased risk of myopathy when nicotinic acid given with ● **STATINS** (applies to lipid regulating doses of nicotinic acid)

**Nifedipine** see Calcium-channel Blockers

**Nilotinib**

- Antibacterials: manufacturer of nilotinib advises avoid concomitant use with ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**; plasma concentration of nilotinib reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antifungals: plasma concentration of nilotinib increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of nilotinib advises avoid concomitant use with ● **ITRACONAZOLE** and ● **VORICONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of nilotinib advised by manufacturer of ● **BOCEPREVIR**; plasma concentration of nilotinib possibly increased by **RITONAVIR**—manufacturer of nilotinib advises avoid concomitant use
- ▶ Anxiolytics and Hypnotics: nilotinib increases plasma concentration of **MIDAZOLAM**
- Grapefruit Juice: manufacturer of nilotinib advises avoid concomitant use with ● **GRAPEFRUIT JUICE**
- ▶ Lipid-regulating Drugs: separating administration from nilotinib by 12 hours advised by manufacturer of **LOMITAPIDE**

**Nimodipine** see Calcium-channel Blockers

**Nintedanib**

- Antibacterials: plasma concentration of nintedanib reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antifungals: plasma concentration of nintedanib increased by ● **KETOCONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

**Nitrates**

- ▶ ACE Inhibitors: enhanced hypotensive effect when nitrates given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when nitrates given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alcohol: enhanced hypotensive effect when nitrates given with **ALCOHOL**
- ▶ Adesleukin: enhanced hypotensive effect when nitrates given with **ALDESLEUKIN**
- ▶ Alpha-blockers: enhanced hypotensive effect when nitrates given with **ALPHA-BLOCKERS**
- ▶ Anaesthetics, General: enhanced hypotensive effect when nitrates given with **GENERAL ANAESTHETICS**
- ▶ Analgesics: hypotensive effect of nitrates antagonised by **NSAIDs**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when nitrates given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Anti-arrhythmics: effects of sublingual tablets of nitrates reduced by **DISOPYRAMIDE** (failure to dissolve under tongue owing to dry mouth)
- Anticoagulants: *infusion* of glyceryl trinitrate reduces anticoagulant effect of ● **HEPARINS**
- ▶ Antidepressants: enhanced hypotensive effect when nitrates given with **MAOIs**; effects of sublingual tablets of nitrates possibly reduced by **TRICYCLIC-RELATED ANTIDEPRESSANTS** (failure to dissolve under tongue owing to dry mouth); effects of sublingual tablets of nitrates reduced by **TRICYCLICS** (failure to dissolve under tongue owing to dry mouth)
- ▶ Antimuscarinics: effects of sublingual tablets of nitrates possibly reduced by **ANTIMUSCARINICS** (failure to dissolve under tongue owing to dry mouth)
- ▶ Antipsychotics: enhanced hypotensive effect when nitrates given with **PHENOTHIAZINES**

**Nitrates** (continued)

- ▶ Anxiolytics and Hypnotics: enhanced hypotensive effect when nitrates given with **ANXIOLYTICS AND HYPNOTICS**
- Avanafil: hypotensive effect of nitrates significantly enhanced by ● **AVANAFIL** (avoid concomitant use)
- ▶ Beta-blockers: enhanced hypotensive effect when nitrates given with **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when nitrates given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when nitrates given with **CLONIDINE**
- ▶ Corticosteroids: hypotensive effect of nitrates antagonised by **CORTICOSTEROIDS**
- ▶ Diazoxide: enhanced hypotensive effect when nitrates given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when nitrates given with **DIURETICS**
- ▶ Dopaminergics: enhanced hypotensive effect when nitrates given with **CO-BENELDOPA, CO-CARELDOPA** or **LEVODOPA**
- Levosimendan: possible severe postural hypotension when isosorbide mononitrate given with ● **LEVOSIMENDAN**
- ▶ Methyldopa: enhanced hypotensive effect when nitrates given with **METHYLDOPA**
- ▶ Moxisylyte: enhanced hypotensive effect when nitrates given with **MOXISYLYTE**
- ▶ Moxonidine: enhanced hypotensive effect when nitrates given with **MOXONIDINE**
- ▶ Muscle Relaxants: enhanced hypotensive effect when nitrates given with **BACLOFEN** or **TIZANIDINE**
- ▶ Oestrogens: hypotensive effect of nitrates antagonised by **ESTROGENS**
- ▶ Prostaglandins: enhanced hypotensive effect when nitrates given with **ALPROSTADIL**
- Riociguat: possible enhanced hypotensive effect when nitrates given with ● **RIOCIGUAT**—avoid concomitant use
- Sildenafil: hypotensive effect of nitrates significantly enhanced by ● **SILDENAFIL** (avoid concomitant use)
- Tadalafil: hypotensive effect of nitrates significantly enhanced by ● **TADALAFIL** (avoid concomitant use)
- Vardenafil: possible increased hypotensive effect when nitrates given with ● **VARDENAFIL**—avoid concomitant use
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when nitrates given with **HYDRALAZINE, MINOXIDIL** or **SODIUM NITROPRUSSIDE**

**Nitrazepam** see Anxiolytics and Hypnotics

**Nitrofurantoin**

- ▶ Antacids: absorption of nitrofurantoin reduced by **ORAL MAGNESIUM SALTS** (as magnesium trisilicate)
- ▶ Antibacterials: nitrofurantoin possibly antagonises effects of **NALIDIXIC ACID**
- ▶ Sulfonpyrazone: excretion of nitrofurantoin reduced by **SULFINPYRAZONE** (increased risk of toxicity)
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNF C

**Nitroimidazoles** see Metronidazole and Tinidazole

**Nitrous Oxide** see Anaesthetics, General

**Nivololumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Nizatidine** see Histamine H<sub>2</sub>-antagonists

**Nomegestrol** see Progestogens

**Noradrenaline (norepinephrine)** see Sympathomimetics

**Norelgestromin** see Progestogens

**Norepinephrine**

**NOTE** Norepinephrine interactions as for noradrenaline, see under sympathomimetics

**Norethisterone** see Progestogens

**Norfloxacin** see Quinolones

**Norgestimate** see Progestogens

**Norgestrel** see Progestogens

**Normal Immunoglobulin** see Immunoglobulins

**Nortriptyline** see Antidepressants, Tricyclic

**NSAIDs**

**NOTE** See also Aspirin. Interactions do not generally apply to topical NSAIDs

- ▶ ACE Inhibitors: increased risk of renal impairment when NSAIDs given with **ACE INHIBITORS**, also hypotensive effect antagonised
- ▶ Adrenergic Neurone Blockers: NSAIDs antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**
- ▶ Aliskiren: NSAIDs possibly antagonise hypotensive effect of **ALISKIREN**
- ▶ Alpha-blockers: NSAIDs antagonise hypotensive effect of **ALPHA-BLOCKERS**
- Analgesics: avoid concomitant use of NSAIDs with ● **NSAIDS** or ● **ASPIRIN** (increased side-effects); avoid concomitant use of NSAIDs with ● **KETOROLAC** (increased side-effects and haemorrhage); ibuprofen possibly reduces antiplatelet effect of **ASPIRIN**
- ▶ Angiotensin-II Receptor Antagonists: increased risk of renal impairment when NSAIDs given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**, also hypotensive effect antagonised
- ▶ Antacids: absorption of acemetacin possibly reduced by **ANTACIDS**
- Antibacterials: indometacin possibly increases plasma concentration of **AMIKACIN** and **GENTAMICIN** in neonates; plasma concentration of celecoxib, diclofenac and etoricoxib reduced by **RIFAMPICIN**; possible increased risk of convulsions when NSAIDs given with ● **QUINOLONES**
- Anticoagulants: increased risk of haemorrhage when *intravenous* diclofenac given with ● **ANTICOAGULANTS** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when ketorolac given with ● **ANTICOAGULANTS** (avoid concomitant use, including low-dose heparins); NSAIDs possibly enhance anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; possible increased risk of bleeding when NSAIDs given with ● **DABIGATRAN** or **HEPARINS**; increased risk of bleeding when NSAIDs given with ● **EDOXABAN** (manufacturer of edoxaban advises avoid long-term NSAIDs)
- Antidepressants: increased risk of bleeding when NSAIDs given with ● **SSRIS** or ● **VENLAFAXINE**
- Antidiabetics: NSAIDs possibly enhance effects of ● **SULFONYLUREAS**
- ▶ Antiepileptics: acemetacin possibly reduces excretion of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- ▶ Antifungals: plasma concentration of parecoxib increased by **FLUCONAZOLE** (reduce dose of parecoxib); plasma concentration of celecoxib increased by **FLUCONAZOLE** (half dose of celecoxib); plasma concentration of flurbiprofen and ibuprofen increased by **FLUCONAZOLE**; plasma concentration of diclofenac and ibuprofen increased by **VORICONAZOLE**
- ▶ Antipsychotics: possible severe drowsiness when acemetacin or indometacin given with **HALOPERIDOL**
- Antivirals: plasma concentration of NSAIDs possibly increased by ● **RITONAVIR**; plasma concentration of piroxicam increased by ● **RITONAVIR** (risk of toxicity)—avoid concomitant use; increased risk of haematological toxicity when NSAIDs given with **ZIDOVUDINE**
- ▶ Azathioprine: manufacturer of azathioprine advises possible increased risk of myelosuppression when indometacin given with **AZATHIOPRINE**
- ▶ Beta-blockers: NSAIDs antagonise hypotensive effect of **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: NSAIDs antagonise hypotensive effect of **CALCIUM-CHANNEL BLOCKERS**
- ▶ Cardiac Glycosides: NSAIDs possibly increase plasma concentration of **CARDIAC GLYCOSIDES**, also possible exacerbation of heart failure and reduction of renal function
- Ciclosporin: increased risk of nephrotoxicity when NSAIDs given with ● **CYCLOSPORIN**; plasma concentration of diclofenac increased by ● **CYCLOSPORIN** (half dose of diclofenac)
- ▶ Clonidine: NSAIDs antagonise hypotensive effect of **CLONIDINE**
- ▶ Clopidogrel: increased risk of bleeding when NSAIDs given with **CLOPIDOGREL**
- ▶ Corticosteroids: increased risk of gastro-intestinal bleeding and ulceration when NSAIDs given with **CORTICOSTEROIDS**
- Cytotoxics: NSAIDs probably reduce excretion of ● **METHOTREXATE** (increased risk of toxicity); diclofenac,

**NSAIDs**

- Cytotoxics (continued)
  - ibuprofen, indometacin, ketoprofen, meloxicam and naproxen reduce excretion of ● **METHOTREXATE** (increased risk of toxicity); NSAIDs possibly reduce renal excretion of **PEMETREXED**—consult product literature; increased risk of bleeding when NSAIDs given with ● **ERLOTINIB**; avoidance of mefenamic acid advised by manufacturer of **REGORAFENIB**
- ▶ Desmopressin: indometacin enhances effects of **DESMOPRESSIN**
- ▶ Diazoxide: NSAIDs antagonise hypotensive effect of **DIAZOXIDE**
- Dimethyl sulfoxide: avoid concomitant use of sulindac with ● **DIMETHYL SULFOXIDE**
- Diuretics: NSAIDs possibly antagonise diuretic effect of **POTASSIUM CANRENOATE**; risk of nephrotoxicity of NSAIDs increased by **DIURETICS**, also antagonism of diuretic effect; indometacin and ketorolac antagonise effects of **DIURETICS**; excretion of acetaminophen possibly increased by **FUROSEMIDE**; occasional reports of reduced renal function when indometacin given with ● **TRIAMTERENE**—avoid concomitant use; increased risk of hyperkalaemia when indometacin given with **ALDOSTERONE ANTAGONISTS** or **POTASSIUM-SPARING DIURETICS**; possible increased risk of hyperkalaemia when NSAIDs given with **ALDOSTERONE ANTAGONISTS** or **POTASSIUM-SPARING DIURETICS**
- ▶ Iloprost: increased risk of bleeding when NSAIDs given with **ILOPROST**
- ▶ Lipid-regulating Drugs: excretion of meloxicam increased by **COLESTYRAMINE**
- Lithium: NSAIDs reduce excretion of ● **LITHIUM** (increased risk of toxicity); ketorolac reduces excretion of ● **LITHIUM** (increased risk of toxicity)—avoid concomitant use
- ▶ Methyl dopa: NSAIDs antagonise hypotensive effect of **METHYLDOPA**
- ▶ Mifamurtide: avoidance of high doses of NSAIDs advised by manufacturer of **MIFAMURTIDE**
- ▶ Moxonidine: NSAIDs antagonise hypotensive effect of **MOXONIDINE**
- ▶ Muscle Relaxants: ibuprofen reduces excretion of **BACLOFEN** (increased risk of toxicity); NSAIDs possibly reduce excretion of **BACLOFEN** (increased risk of toxicity)
- ▶ Nicorandil: increased risk of gastro-intestinal bleeding and ulceration when NSAIDs given with **NICORANDIL**
- ▶ Nitrates: NSAIDs antagonise hypotensive effect of **NITRATES**
- ▶ Oestrogens: etoricoxib increases plasma concentration of **ETHINYLESTRADIOL**
- ▶ Penicillamine: possible increased risk of nephrotoxicity when NSAIDs given with **PENICILLAMINE**
- Pentoxifylline: possible increased risk of bleeding when NSAIDs given with **PENTOXIFYLLINE**; increased risk of bleeding when ketorolac given with ● **PENTOXIFYLLINE** (avoid concomitant use)
- ▶ Prasugrel: possible increased risk of bleeding when NSAIDs given with **PRASUGREL**
- Tacrolimus: possible increased risk of nephrotoxicity when NSAIDs given with **TACROLIMUS**; increased risk of nephrotoxicity when ibuprofen given with ● **TACROLIMUS**
- ▶ Vasodilator Antihypertensives: NSAIDs antagonise hypotensive effect of **HYDRALAZINE**, **MINOXIDIL** and **SODIUM NITROPRUSSIDE**
- Obinutuzumab**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use
- Ocreotide**
- ▶ Antidiabetics: ocreotide possibly reduces requirements for **ANTI-DIABETICS**
- Ciclosporin: ocreotide reduces plasma concentration of ● **CICLOSPORIN**
- ▶ Dopaminergics: ocreotide increases plasma concentration of **BROMOCRIPTINE**
- ▶ Ulcer-healing Drugs: ocreotide possibly delays absorption of **CIMETIDINE**
- Oestrogens**
- ▶ ACE Inhibitors: oestrogens antagonise hypotensive effect of **ACE INHIBITORS**

**Oestrogens** (continued)

- ▶ Adrenergic Neurone Blockers: oestrogens antagonise hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alpha-blockers: oestrogens antagonise hypotensive effect of **ALPHA-BLOCKERS**
- ▶ Aminophylline: oestrogens increase plasma concentration of **AMINOPHYLLINE** (consider reducing dose of aminophylline)
- ▶ Analgesics: plasma concentration of ethinylestradiol increased by **ETORICOXIB**
- ▶ Angiotensin-II Receptor Antagonists: oestrogens antagonise hypotensive effect of **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antibacterials: plasma concentration of estradiol increased by **ERYTHROMYCIN**; metabolism of oestrogens accelerated by ● **RIFAMYCINS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Anticoagulants: oestrogens may enhance or reduce anticoagulant effect of **COUMARINS**; oestrogens antagonise anticoagulant effect of ● **PHENINDIONE**
- Anti-depressants: contraceptive effect of oestrogens reduced by ● **ST JOHN'S WORT** (avoid concomitant use); oestrogens antagonise antidepressant effect of **TRICYCLICS** (but side-effects of tricyclics possibly increased due to increased plasma concentration)
- ▶ Antidiabetics: oestrogens antagonise hypoglycaemic effect of **ANTI-DIABETICS**
- Antiepileptics: metabolism of oestrogens accelerated by ● **CARBAMAZEPINE**, ● **ESLICARBAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAMAZEPINE**, ● **PHENOBARBITAL**, ● **PHENYTOIN**, ● **PRIMIDONE**, ● **RUFINAMIDE** and ● **TOPIRAMATE** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC); oestrogens reduce plasma concentration of ● **LAMOTRIGINE**—consider increasing dose of lamotrigine; ethinylestradiol possibly reduces plasma concentration of **SODIUM VALPROATE** and **VALPROIC ACID**
- ▶ Antifungals: plasma concentration of ethinylestradiol increased by **KETOCONAZOLE**; oestrogens increase plasma concentration of **VORICONAZOLE**; anecdotal reports of contraceptive failure and menstrual irregularities when oestrogens given with **GRISEOFULVIN**; anecdotal reports of contraceptive failure when oestrogens given with **IMIDAZOLES**; occasional reports of breakthrough bleeding when oestrogens (used for contraception) given with **TERBINAFINE**
- Antivirals: plasma concentration of ethinylestradiol increased by **ATAZANAVIR**; avoidance of ethinylestradiol advised by manufacturer of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—use alternative form of contraception; metabolism of oestrogens accelerated by ● **NEVIRAPINE** and ● **RITONAVIR** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC); plasma concentration of ethinylestradiol possibly reduced by ● **TELAPREVIR**—manufacturer of telaprevir advises additional contraceptive precautions
- ▶ Anxiolytics and Hypnotics: oestrogens possibly increase plasma concentration of **CHLORDIAZEPOXIDE**,  **DIAZEPAM** and **NITRAZEPAM**; oestrogens possibly reduce plasma concentration of **LORAZEPAM**, **OXAZEPAM** and **TEMAZEPAM**; oestrogens increase plasma concentration of **MELATONIN**
- Aprepitant: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with ● **APREPITANT** (alternative contraception recommended)
- ▶ Beta-blockers: oestrogens antagonise hypotensive effect of **BETA-BLOCKERS**
- Bosentan: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with ● **BOSENTAN** (alternative contraception recommended)
- ▶ Calcium-channel Blockers: oestrogens antagonise hypotensive effect of **CALCIUM-CHANNEL BLOCKERS**
- ▶ Ciclosporin: oestrogens possibly increase plasma concentration of **CICLOSPORIN**
- ▶ Clonidine: oestrogens antagonise hypotensive effect of **CLONIDINE**
- Cobicistat: metabolism of oestrogens accelerated by ● **COBICISTAT** (reduced contraceptive effect with combined oral

**Oestrogens**

- **Cobicistat** (continued)
  - contraceptives, contraceptive patches, and vaginal rings—see **Contraceptive Interactions** in BNF or BNF C
- ▶ **Corticosteroids**: oral contraceptives containing **corticosteroids** increase plasma concentration of **CORTICOSTEROIDS**
- **Cytotoxics**: possible reduction in contraceptive effect of oestrogens advised by manufacturer of ● **CRIZOTINIB** and ● **VEMURAFENIB**; possible reduced contraceptive effect of hormonal contraceptives containing oestrogens advised by manufacturer of ● **DABRAFENIB** (alternative contraception recommended); possible reduction in contraceptive effect of oestrogens advised by manufacturer of ● **OLAPARIB** (alternative contraception recommended)
- ▶ **Diuretics**: oestrogens antagonise diuretic effect of **DIURETICS**
- **Dopaminergics**: oestrogens increase plasma concentration of **ROPINIROLE**; oestrogens increase plasma concentration of ● **SELEGILINE**—manufacturer of selegiline advises avoid concomitant use
- **Fosaprepitant**: possible contraceptive failure of hormonal contraceptives containing oestrogens when given with ● **FOSAPREPITANT** (alternative contraception recommended)
- ▶ **Lipid-regulating Drugs**: absorption of ethinylestradiol reduced by **COLESEVELAM**; plasma concentration of ethinylestradiol increased by **ATORVASTATIN** and **ROSUVASTATIN**; separating administration from oestrogens by 12 hours advised by manufacturer of **LIMITAPIDE**
- **Lumacaftor**: possible contraceptive failure of hormonal contraceptives containing ethinylestradiol when given with ● **LUMACAFOR** (alternative contraception recommended)
- ▶ **Methyldopa**: oestrogens antagonise hypotensive effect of **METHYLDOPA**
- **Modafinil**: metabolism of oestrogens accelerated by ● **MODAFINIL** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see **Contraceptive Interactions** in BNF or BNF C)
- ▶ **Moxonidine**: oestrogens antagonise hypotensive effect of **MOXONIDINE**
- ▶ **Muscle Relaxants**: oestrogens possibly increase plasma concentration of **TIZANIDINE** (increased risk of toxicity)
- ▶ **Nitrates**: oestrogens antagonise hypotensive effect of **NITRATES**
- ▶ **Somatropin**: oestrogens (when used as oral replacement therapy) may increase dose requirements of **SOMATROPIN**
- ▶ **Tacrolimus**: ethinylestradiol possibly increases plasma concentration of **TACROLIMUS**
- ▶ **Teriflunomide**: plasma concentration of ethinylestradiol increased by **TERIFLUNOMIDE**
- ▶ **Theophylline**: oestrogens increase plasma concentration of **THEOPHYLLINE** (consider reducing dose of theophylline)
- ▶ **Thyroid Hormones**: oestrogens may increase requirements for **THYROID HORMONES** in hypothyroidism
- ▶ **Vasodilator Antihypertensives**: oestrogens antagonise hypotensive effect of **HYDRALAZINE**, **MINOXIDIL** and **SODIUM NITROPRUSSIDE**

**Oestrogens, conjugated** see Oestrogens

**Ofatumumab**

- **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Ofloxacin** see Quinolones

**Olanzapine** see Antipsychotics

**Olaparib**

- **Antibacterials**: plasma concentration of olaparib possibly increased by ● **CIPROFLOXACIN**, ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** and ● **TELITHROMYCIN** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881); manufacturer of olaparib advises avoid concomitant use with ● **RIFABUTIN** and ● **RIFAMPICIN**
- **Antidepressants**: manufacturer of olaparib advises avoid concomitant use with ● **ST JOHN'S WORT**
- **Antiepileptics**: manufacturer of olaparib advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PHENYTOIN**
- **Antifungals**: plasma concentration of olaparib possibly increased by ● **FLUCONAZOLE** (avoid concomitant use or reduce

**Olaparib**

- **Antifungals** (continued)
    - dose of olaparib—see under Olaparib, p. 881); plasma concentration of olaparib increased by ● **ITRACONAZOLE** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
  - **Antipsychotics**: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
  - **Antivirals**: plasma concentration of olaparib possibly increased by ● **BOCEPREVIR**, ● **RITONAVIR** and ● **TELAAPREVIR** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881); manufacturer of olaparib advises avoid concomitant use with ● **NEVIRAPINE**
  - **Calcium-channel Blockers**: plasma concentration of olaparib possibly increased by ● **DILTIAZEM** and ● **VERAPAMIL** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
  - **Cobicistat**: plasma concentration of olaparib possibly increased by ● **COBICISTAT** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
  - ▶ **Grapefruit Juice**: manufacturer of olaparib advises avoid concomitant use with **GRAPEFRUIT JUICE**
  - **Oestrogens**: manufacturer of olaparib advises that contraceptive effect of ● **OESTROGENS** possibly reduced (alternative contraception recommended)
  - **Progestogens**: manufacturer of olaparib advises that contraceptive effect of ● **PROGESTOGENS** possibly reduced (alternative contraception recommended)
- Olmесartan** see Angiotensin-II Receptor Antagonists
- Olodaterol** see Sympathomimetics, Beta<sub>2</sub>
- Ombitasvir**
- **Antibacterials**: plasma concentration of ombitasvir possibly reduced by ● **RIFAMPICIN**—avoid concomitant use
  - **Antidepressants**: plasma concentration of ombitasvir possibly reduced by ● **ST JOHN'S WORT**—manufacturer of ombitasvir advises avoid concomitant use
  - **Antiepileptics**: plasma concentration of ombitasvir reduced by ● **CARBAMAZEPINE**—avoid concomitant use; plasma concentration of ombitasvir possibly reduced by ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
  - ▶ **Antifungals**: manufacturer of ombitasvir advises avoid concomitant use with **KETOCONAZOLE**
  - ▶ **Antivirals**: manufacturer of ombitasvir advises avoid concomitant use with **EFAVIRENZ**, **ETRAVIRINE** and **NEVIRAPINE**
  - ▶ **Cobicistat**: manufacturer of ombitasvir advises avoid concomitant use with **COBICISTAT**
  - ▶ **Cytotoxics**: manufacturer of ombitasvir advises avoid concomitant use with **MITOTANE**
  - **Diuretics**: ombitasvir increases plasma concentration of ● **FUROSEMIDE** (reduce dose of furosemide)
  - ▶ **Hormone Antagonists**: manufacturer of ombitasvir advises avoid concomitant use with **ENZALUTAMIDE**
  - ▶ **Lipid-regulating Drugs**: manufacturer of ombitasvir advises avoid concomitant use with ● **ATORVASTATIN** and ● **SIMVASTATIN**
  - **Oestrogens**: manufacturer of ombitasvir advises avoid concomitant use of ● **ETHINYLESTRADIOL**—use alternative form of contraception
- Omeprazole** see Proton Pump Inhibitors
- Ondansetron** see 5HT<sub>3</sub>-receptor Antagonists (under HT)
- Opioid Analgesics**
- ▶ **Alcohol**: enhanced hypotensive and sedative effects when opioid analgesics given with **ALCOHOL**
  - ▶ **Anaesthetics, General**: fentanyl inhibits metabolism of **ETOMIDATE** (consider reducing dose of etomidate); opioid analgesics possibly enhance effects of **INTRAVENOUS GENERAL ANAESTHETICS** and **VOLATILE LIQUID GENERAL ANAESTHETICS**
  - **Analgesics**: possible opioid withdrawal when tapentadol given with ● **BUPRENORPHINE** and ● **PENTAZOCINE**; possible opioid withdrawal when buprenorphine given with ● **DIAMORPHINE**, ● **DIPIPANONE**, ● **HYDROMORPHONE**, ● **METHADONE**, ● **MORPHINE**, ● **OXYCODONE**, ● **PAPAVETERUM**, ● **PETHIDINE** and ● **TRAMADOL**; avoidance of buprenorphine advised by manufacturer of **FENTANYL**; possible opioid withdrawal when diamorphine, dipipanone, hydromorphone, methadone, morphine, oxycodone and papaveretum given with ● **PENTAZOCINE**;

## Opioid Analgesics

- Analgesics (continued)
  - manufacturer of fentanyl advises avoid concomitant use with **PENTAZOCINE**; possible opioid withdrawal when pentazocine given with • **PETHIDINE** and • **TRAMADOL**
- Antibacterials: plasma concentration of fentanyl possibly increased by **CLARITHROMYCIN**; plasma concentration of alfentanil increased by **ERYTHROMYCIN**; metabolism of alfentanil, codeine, fentanyl, methadone and morphine accelerated by **RIFAMPICIN** (reduced effect); metabolism of oxycodone possibly accelerated by **RIFAMPICIN**; increased risk of ventricular arrhythmias when methadone given with • **DELAMANID**; manufacturer of pethidine advises avoid concomitant use with **ISONIAZID**; possible increased risk of ventricular arrhythmias when methadone given with • **TELITHROMYCIN**; metabolism of oxycodone inhibited by **TELITHROMYCIN**
- Anticoagulants: tramadol enhances anticoagulant effect of • **COUMARINS**
- Antidepressants: plasma concentration of methadone possibly increased by **FLUOXETINE**, **FLUVOXAMINE**, **PAROXETINE** and **SERTRALINE**; possible increased serotonergic effects when pethidine or tramadol given with **DULOXETINE**; possible increased serotonergic effects when tramadol given with **MIRTAZAPINE**, **VENLAFAXINE** or **VORTIOXETINE**; possible increased serotonergic effects when fentanyl given with **MAOIS**, **SSRI-RELATED ANTIDEPRESSANTS** or **SSRIS**; possible CNS excitation or depression (hypertension or hypotension) when opioid analgesics given with • **MAOIS**—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; possible increased serotonergic effects and increased risk of convulsions when tramadol given with • **MAOIS**—some manufacturers advise avoid concomitant use and for 2 weeks after stopping MAOIs; CNS excitation or depression (hypertension or hypotension) when pethidine given with • **MAOIS**—avoid concomitant use and for 2 weeks after stopping MAOIs; possible CNS excitation or depression (hypertension or hypotension) when opioid analgesics given with • **MOCLOBEMIDE**—manufacturer of moclobemide advises consider reducing dose of opioid analgesics; possible CNS excitation or depression (hypertension or hypotension) when dextromethorphan or pethidine given with • **MOCLOBEMIDE**—avoid concomitant use; increased risk of CNS toxicity when tramadol given with • **SSRIS** or • **TRICYCLICS**; plasma concentration of methadone possibly reduced by **ST JOHN'S WORT**; sedative effects possibly increased when opioid analgesics given with **TRICYCLICS**
- Antiepileptics: dextropropoxyphene enhances effects of • **CARBAMAZEPINE**; effects of tramadol reduced by **CARBAMAZEPINE**; plasma concentration of methadone reduced by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE**; metabolism of fentanyl possibly accelerated by **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN** (reduced effect); metabolism of methadone accelerated by **FOSPHENYTOIN** and **PHENYTOIN** (reduced effect and risk of withdrawal effects); possible increased risk of pethidine toxicity when given with • **FOSPHENYTOIN** and • **PHENYTOIN**; morphine increases bioavailability of **GABAPENTIN**
- Antifungals: metabolism of buprenorphine inhibited by • **KETOCONAZOLE** (reduce dose of buprenorphine); possible increased risk of ventricular arrhythmias when methadone given with • **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of oxycodone increased by **ITRACONAZOLE**, **KETOCONAZOLE** and • **VORICONAZOLE**; metabolism of alfentanil inhibited by **FLUCONAZOLE** (risk of prolonged or delayed respiratory depression); plasma concentration of methadone increased by **FLUCONAZOLE**; metabolism of alfentanil possibly inhibited by **ITRACONAZOLE**; plasma concentration of methadone possibly increased by • **ITRACONAZOLE** (increased risk of ventricular arrhythmias); plasma concentration of alfentanil and methadone increased by • **VORICONAZOLE** (consider reducing dose of alfentanil and methadone); plasma concentration of fentanyl possibly increased by • **TRIAZOLIS**
- Antihistamines: sedative effects possibly increased when opioid analgesics given with • **SEDATING ANTIHISTAMINES**

## Opioid Analgesics (continued)

- Antimalarials: avoidance of methadone advised by manufacturer of • **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
- ▶ Antimuscarinics: possible increased risk of antimuscarinic side-effects when codeine given with **ANTIMUSCARINICS**
- Antipsychotics: enhanced hypotensive and sedative effects when opioid analgesics given with **ANTIPSYCHOTICS**; increased risk of ventricular arrhythmias when methadone given with • **ANTIPSYCHOTICS** that prolong the QT interval; increased risk of convulsions when tramadol given with **ANTIPSYCHOTICS**; increased risk of ventricular arrhythmias when methadone given with • **AMISULPRIDE**—avoid concomitant use
- Antivirals: plasma concentration of methadone possibly reduced by **ABACAVIR**, **NEVIRAPINE** and **RILPIVIRINE**; plasma concentration of buprenorphine increased by **ATAZANAVIR**; possible increased risk of prolonged sedation and respiratory depression when buprenorphine given with **BOCEPREVIR**; plasma concentration of methadone possibly affected by **BOCEPREVIR**; methadone possibly reduces plasma concentration of **DIDANOSINE**; plasma concentration of methadone reduced by **EFAVIRENZ**, **FOSAMPRENAVIR** and **RITONAVIR**; plasma concentration of dextropropoxyphene increased by • **RITONAVIR** (risk of toxicity)—avoid concomitant use; plasma concentration of buprenorphine possibly increased by **RITONAVIR**; plasma concentration of alfentanil and fentanyl increased by • **RITONAVIR**; plasma concentration of pethidine reduced by • **RITONAVIR**, but plasma concentration of toxic pethidine metabolite increased (avoid concomitant use); plasma concentration of morphine possibly reduced by **RITONAVIR**; increased risk of ventricular arrhythmias when alfentanil, fentanyl or methadone given with • **SAQUINAVIR**—avoid concomitant use; caution with methadone advised by manufacturer of • **TELAPREVIR** (risk of ventricular arrhythmias); buprenorphine possibly reduces plasma concentration of **TIPRANAVIR**; methadone possibly increases plasma concentration of **ZIDOVUDINE**
- ▶ Anxiolytics and Hypnotics: increased sedative effect when opioid analgesics given with **ANXIOLYTICS AND HYPNOTICS**; fentanyl possibly inhibits metabolism of **MIDAZOLAM**
- Atomoxetine: increased risk of ventricular arrhythmias when methadone given with • **ATOMOXETINE**; possible increased risk of convulsions when tramadol given with **ATOMOXETINE**
- ▶ Beta-blockers: morphine possibly increases plasma concentration of **ESMOLOL**
- ▶ Calcium-channel blockers: metabolism of alfentanil inhibited by **DILTIAZEM** (risk of prolonged or delayed respiratory depression)
- Cytotoxics: possible increased risk of ventricular arrhythmias when methadone given with • **BOSUTINIB** and • **CERITINIB**; avoidance of alfentanil and fentanyl advised by manufacturer of **CERITINIB**; caution with alfentanil and fentanyl advised by manufacturer of • **CRIZOTINIB**; possible increased risk of ventricular arrhythmias when methadone given with • **VANDETANIB**—avoid concomitant use
- Dapoxetine: possible increased risk of serotonergic effects when tramadol given with • **DAPOXETINE** (manufacturer of dapoxetine advises tramadol should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping tramadol)
- ▶ Domperidone: opioid analgesics antagonise effects of **DOMPERIDONE** on gastro-intestinal activity
- Dopaminergics: risk of CNS toxicity when pethidine given with • **RASAGILINE** (avoid pethidine for 2 weeks after rasagiline); avoid concomitant use of dextromethorphan with • **RASAGILINE**; hyperpyrexia and CNS toxicity reported when pethidine given with • **SELEGILINE** (avoid concomitant use); avoidance of opioid analgesics advised by manufacturer of **SELEGILINE**
- ▶ Hormone Antagonists: plasma concentration of dextromethorphan increased by **ABIRATERONE**
- 5HT<sub>3</sub>-receptor Antagonists: effects of tramadol possibly antagonised by **ONDANSETRON**
- Memantine: increased risk of CNS toxicity when dextromethorphan given with • **MEMANTINE** (manufacturer of memantine advises avoid concomitant use)

**Opioid Analgesics** (continued)

- ▶ Metoclopramide: opioid analgesics antagonise effects of **METOCLOPRAMIDE** on gastro-intestinal activity
- ▶ Muscle Relaxants: opioid analgesics enhance effect when fentanyl or morphine given with **BACLOFEN**
- Nalmefene: avoidance of opioid analgesics advised by manufacturer of ● **NALMEFENE**
- ▶ Netupitant: caution with morphine advised by manufacturer of **NETUPITANT**
- Panobinostat: avoidance of dextromethorphan advised by manufacturer of **PANOBINOSTAT**; possible increased risk of ventricular arrhythmias when methadone given with ● **PANOBINOSTAT**—avoid concomitant use
- Sodium Oxybate: opioid analgesics enhance effects of ● **SODIUM OXYBATE** (avoid concomitant use)
- ▶ Ulcer-healing Drugs: metabolism of opioid analgesics inhibited by **CIMETIDINE** (increased plasma concentration)

**Oritavancin**

- ▶ Anticoagulants: oritavancin possibly increases plasma concentration of **WARFARIN**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Orlistat**

- ▶ Anti-arrhythmics: orlistat possibly reduces plasma concentration of **AMIODARONE**
- ▶ Anticoagulants: manufacturer of orlistat recommends monitoring anticoagulant effect of **COUMARINS**
- ▶ Antidiabetics: manufacturer of orlistat advises avoid concomitant use with **ACARBOSE**
- Antiepileptics: possible increased risk of convulsions when orlistat given with ● **ANTIEPILEPTICS**
- Antivirals: orlistat possibly reduces absorption of ● **ABACAVIR**, ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **DIDANOSINE**, ● **EFAVIRENZ**, ● **ELVITEGRAVIR**, ● **EMTRICITABINE**, ● **ENFUVIDIRINE**, ● **ETRAVIRINE**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LAMIVUDINE**, ● **LOPINAVIR**, ● **MARAVIROC**, ● **NEVIRAPINE**, ● **RALTEGRAVIR**, ● **RILPIVIRINE**, ● **RITONAVIR**, ● **SAQUINAVIR**, ● **STAVUDINE**, ● **TENOFOVIR**, ● **TIPRANAVIR** and ● **ZIDOVUDINE**
- Ciclosporin: orlistat possibly reduces absorption of ● **CICLOSPORIN**
- ▶ Thyroid Hormones: possible increased risk of hypothyroidism when orlistat given with **LEVOTHYROXINE**

**Orphenadrine** see Antimuscarinics**Oxaliplatin** see Platinum Compounds**Oxandrolone** see Anabolic Steroids**Oxazepam** see Anxiolytics and Hypnotics**Oxcarbazepine**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: oxcarbazepine sometimes reduces plasma concentration of **CARBAMAZEPINE** (but concentration of an active metabolite of carbamazepine may be increased), also plasma concentration of an active metabolite of oxcarbazepine often reduced; avoidance of oxcarbazepine advised by manufacturer of **ESLICARBAZEPINE**; oxcarbazepine increases plasma concentration of **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; oxcarbazepine reduces plasma concentration of ● **PERAMPANEL**, also plasma concentration of oxcarbazepine increased (see under Perampanel, p. 301); plasma concentration of an active metabolite of oxcarbazepine sometimes reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Antivirals: oxcarbazepine possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; oxcarbazepine possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir,

**Oxcarbazepine**

- Antivirals (continued)
  - p. 592); avoidance of oxcarbazepine advised by manufacturer of **LEDIPASVIR** and **SOFOSBUVIR**; avoidance of oxcarbazepine advised by manufacturer of ● **RILPIVIRINE** (plasma concentration of rilpivirine possibly reduced)
- ▶ Ciclosporin: oxcarbazepine possibly reduces plasma concentration of **CICLOSPORIN**
- Clopidogrel: oxcarbazepine possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
- Cytotoxics: oxcarbazepine reduces plasma concentration of ● **IMATINIB**—avoid concomitant use
- Guanfacine: oxcarbazepine possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Oestrogens: oxcarbazepine accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: oxcarbazepine accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)

**Oxprenolol** see Beta-blockers**Oxybutynin** see Antimuscarinics**Oxycodone** see Opioid Analgesics**Oxymetazoline** see Sympathomimetics**Oxytetracycline** see Tetracyclines**Oxytocin**

- ▶ Anaesthetics, General: oxytocic effect possibly reduced, also enhanced hypotensive effect and risk of arrhythmias when oxytocin given with **VOLATILE LIQUID GENERAL ANAESTHETICS**
- ▶ Prostaglandins: uterotonic effect of oxytocin potentiated by **PROSTAGLANDINS**
- ▶ Sympathomimetics: risk of hypertension when oxytocin given with vasoconstrictor **SYMPATHOMIMETICS** (due to enhanced vasopressor effect)

**Paclitaxel**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Antivirals: plasma concentration of paclitaxel increased by **RITONAVIR**
- Cytotoxics: increased risk of neutropenia when paclitaxel given with ● **LAPATINIB**

**Paliperidone** see Antipsychotics**Palonosetron** see 5HT<sub>3</sub>-receptor Antagonists (under HT)**Pamidronate Disodium** see Bisphosphonates**Pancreatin**

- ▶ Antidiabetics: pancreatin antagonises hypoglycaemic effect of **ACARBOSE**

**Pancuronium** see Muscle Relaxants**Panitumumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: manufacturer of panitumumab advises avoid concomitant use with ● **BEVACIZUMAB**, ● **FLUOROURACIL**, ● **IRINOTECAN** and ● **OXALIPLATIN**
- Folates: manufacturer of panitumumab advises avoid concomitant use with ● **FOLINIC ACID**
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Panobinostat**

- Analgesics: manufacturer of panobinostat advises avoid concomitant use with **DEXTRORHETHORPHAN**; possible increased risk of ventricular arrhythmias when panobinostat given with ● **METHADONE**—avoid concomitant use
- Anti-arrhythmics: possible increased risk of ventricular arrhythmias when panobinostat given with ● **AMIODARONE** or ● **DISOPYRAMIDE**—avoid concomitant use
- Antibacterials: increased risk of ventricular arrhythmias when panobinostat given with ● **CLARITHROMYCIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when panobinostat given with ● **MOXIFLOXACIN**—

**Panobinostat**

- **Antibacterials** (continued)
  - avoid concomitant use; manufacturer of panobinostat advises avoid concomitant use with ● **RIFABUTIN** and ● **RIFAMPICIN**; plasma concentration of panobinostat possibly increased by ● **TELITHROMYCIN** (reduce dose of panobinostat—see under Panobinostat, p. 834)
- ▶ **Antidepressants**: manufacturer of panobinostat advises avoid concomitant use with **ST JOHN'S WORT**
- **Antiepileptics**: manufacturer of panobinostat advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- **Antifungals**: plasma concentration of panobinostat increased by ● **KETOCONAZOLE** (reduce dose of panobinostat—see under Panobinostat, p. 834); plasma concentration of panobinostat possibly increased by ● **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE** (reduce dose of panobinostat—see under Panobinostat, p. 834)
- **Antimalarials**: possible increased risk of ventricular arrhythmias when panobinostat given with ● **CHLOROQUINE**—avoid concomitant use
- **Antipsychotics**: possible increased risk of ventricular arrhythmias when panobinostat given with ● **PIMOZIDE**—avoid concomitant use
- **Antivirals**: plasma concentration of panobinostat possibly increased by ● **RITONAVIR** and ● **SAQUINAVIR** (reduce dose of panobinostat—see under Panobinostat, p. 834)
- **Beta-blockers**: possible increased risk of ventricular arrhythmias when panobinostat given with ● **SOTALOL**—avoid concomitant use
- ▶ **Corticosteroids**: plasma concentration of panobinostat reduced by **DEXAMETHASONE**
- ▶ **Grapefruit Juice**: manufacturer of panobinostat advises avoid concomitant use with **GRAPEFRUIT JUICE**
- **5HT<sub>2</sub>-receptor Antagonists**: possible increased risk of ventricular arrhythmias when panobinostat given with ● **GRANISETRON** and ● **ONDANSETRON**

**Pantoprazole** see Proton Pump Inhibitors

**Papaveretum** see Opioid Analgesics

**Paracetamol**

- ▶ **Anticoagulants**: prolonged regular use of paracetamol possibly enhances anticoagulant effect of **COUMARINS**
- ▶ **Antidiabetics**: absorption of paracetamol possibly reduced when given 1 to 4 hours after **LIXISENATIDE**
- ▶ **Antiepileptics**: metabolism of paracetamol possibly accelerated by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (also isolated reports of hepatotoxicity)
- ▶ **Antifungals**: avoidance of paracetamol advised by manufacturer of **KETOCONAZOLE**
- ▶ **Cytotoxics**: paracetamol possibly inhibits metabolism of *intravenous* **BUSULFAN** (manufacturer of *intravenous* busulfan advises caution within 72 hours of paracetamol); caution with paracetamol advised by manufacturer of **IMATINIB**
- ▶ **Lipid-regulating Drugs**: absorption of paracetamol reduced by **COLESTYRAMINE**
- ▶ **Metoclopramide**: rate of absorption of paracetamol increased by **METOCLOPRAMIDE**

**Paraldehyde**

- **Alcohol**: increased sedative effect when paraldehyde given with ● **ALCOHOL**
- **Disulfiram**: risk of toxicity when paraldehyde given with ● **DISULFIRAM**

**Parasympathomimetics**

- ▶ **Anti-arrhythmics**: effects of neostigmine and pyridostigmine possibly antagonised by **PROPAFENONE**
- **Antibacterials**: plasma concentration of galantamine increased by **ERYTHROMYCIN**; effects of neostigmine and pyridostigmine antagonised by ● **AMINOGLYCOSIDES**; effects of neostigmine and pyridostigmine antagonised by **CLINDAMYCIN**; effects of neostigmine and pyridostigmine antagonised by ● **POLYMYXINS**
- ▶ **Antidepressants**: plasma concentration of galantamine increased by **PAROXETINE**
- ▶ **Antifungals**: plasma concentration of galantamine increased by **KETOCONAZOLE**
- ▶ **Antimalarials**: effects of neostigmine and pyridostigmine may be diminished because of potential for **CHLOROQUINE** to

**Parasympathomimetics**

- ▶ **Antimalarials** (continued)
  - increase symptoms of myasthenia gravis; effects of neostigmine and pyridostigmine may be diminished because of potential for **HYDROXYCHLOROQUINE** to increase symptoms of myasthenia gravis
- ▶ **Antimuscarinics**: effects of parasympathomimetics antagonised by **ANTIMUSCARINICS**
- ▶ **Beta-blockers**: increased risk of arrhythmias when pilocarpine given with **BETA-BLOCKERS**; effects of neostigmine and pyridostigmine antagonised by **PROPRANOLOL**
- ▶ **Cytotoxics**: possible increased risk of bradycardia when pilocarpine given with **CRIZOTINIB**
- ▶ **Lithium**: effects of neostigmine antagonised by **LITHIUM**
- ▶ **Muscle Relaxants**: donepezil possibly enhances effects of **SUXAMETHONIUM**; galantamine, neostigmine, pyridostigmine and rivastigmine enhance effects of **SUXAMETHONIUM**; neostigmine, pyridostigmine and rivastigmine antagonise effects of **NON-DEPOLARISING MUSCLE RELAXANTS**; donepezil possibly antagonises effects of **NON-DEPOLARISING MUSCLE RELAXANTS**

**Parcoxib** see NSAIDs

**Paricalcitol** see Vitamins

**Paritaprevir**

- ▶ **Angiotensin-II Receptor Antagonists**: paritaprevir possibly increases plasma concentration of **CANDESARTAN**, **LOSARTAN** and **VALSARTAN**—manufacturer of paritaprevir advises reduce dose of candesartan, losartan and valsartan
- **Antibacterials**: manufacturer of paritaprevir advises avoid concomitant use with **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of paritaprevir possibly reduced by ● **RIFAMPICIN**—avoid concomitant use
- **Antidepressants**: plasma concentration of paritaprevir possibly reduced by ● **ST JOHN'S WORT**—manufacturer of paritaprevir advises avoid concomitant use
- **Antiepileptics**: plasma concentration of paritaprevir reduced by ● **CARBAMAZEPINE**—avoid concomitant use; plasma concentration of paritaprevir possibly reduced by ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- **Antifungals**: plasma concentration of both drugs increased when paritaprevir given with ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of both drugs possibly increased when paritaprevir given with ● **ITRACONAZOLE** and ● **POSACONAZOLE**—avoid concomitant use
- **Antivirals**: plasma concentration of paritaprevir increased by ● **ATAZANAVIR**; plasma concentration of paritaprevir increased by ● **DARUNAVIR** and plasma concentration of darunavir decreased; manufacturer of paritaprevir advises avoid concomitant use with **EFAVIRENZ**, **ETRAVIRINE**, **INDINAVIR**, **NEVIRAPINE**, **SAQUINAVIR** and **TIPRANAVIR**; plasma concentration of paritaprevir increased by ● **LOPINAVIR**—manufacturer of paritaprevir advises avoid concomitant use
- ▶ **Cardiac Glycosides**: paritaprevir possibly increases plasma concentration of **DIGOXIN** (consider reducing dose of digoxin)
- ▶ **Cobicistat**: manufacturer of paritaprevir advises avoid concomitant use with **COBICISTAT**
- ▶ **Cytotoxics**: manufacturer of paritaprevir advises avoid concomitant use with **MITOTANE**
- **Diuretics**: paritaprevir increases plasma concentration of ● **FUROSEMIDE** (reduce dose of furosemide)
- ▶ **Hormone Antagonists**: manufacturer of paritaprevir advises avoid concomitant use with **ENZALUTAMIDE**
- **Lipid-regulating Drugs**: plasma concentration of paritaprevir increased by ● **GEMFIBROZIL**—manufacturer of paritaprevir advises avoid concomitant use; manufacturer of paritaprevir advises avoid concomitant use with ● **ATORVASTATIN**, **FLUVASTATIN** and ● **SIMVASTATIN**; paritaprevir increases plasma concentration of ● **PRAVASTATIN** (reduce dose of pravastatin); paritaprevir increases plasma concentration of ● **ROSUVASTATIN** (reduce dose of rosuvastatin—see under Rosuvastatin, p. 193)
- **Oestrogens**: manufacturer of paritaprevir advises avoid concomitant use of ● **ETHINYLESTRADIOL**—use alternative form of contraception

**Paroxetine** see Antidepressants, SSRI

**Pasireotide**

- ▶ Antidiabetics: pasireotide possibly reduces requirements for **ANTI-DIABETICS**
- ▶ Antifungals: avoidance of pasireotide advised by manufacturer of **KETOCONAZOLE**
- ▶ Antimuscarinics: possible increased risk of bradycardia when pasireotide given with **IPRATROPIUM** or **OXYBUTYRIN**
- ▶ Beta-blockers: possible increased risk of bradycardia when pasireotide given with **CARTEOLOL**, **METOPROLOL**, **PROPRANOLOL** or **SOTALOL**
- ▶ Calcium-channel Blockers: possible increased risk of bradycardia when pasireotide given with **DILTIAZEM** or **VERAPAMIL**
- Ciclosporin: pasireotide possibly reduces plasma concentration of ● **CICLOSPORIN**

**Pazopanib**

- Antibacterials: plasma concentration of pazopanib possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN** (reduce dose of pazopanib); plasma concentration of pazopanib possibly reduced by ● **RIFAMPICIN**
- Antifungals: plasma concentration of pazopanib increased by ● **KETOCONAZOLE** (reduce dose of pazopanib); plasma concentration of pazopanib possibly increased by ● **ITRACONAZOLE** and ● **VORICONAZOLE** (reduce dose of pazopanib)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of pazopanib possibly increased by ● **ATAZANAVIR**, ● **INDINAVIR** and ● **RITONAVIR** (reduce dose of pazopanib); avoidance of pazopanib advised by manufacturer of ● **BOCEPREVIR**; increased risk of ventricular arrhythmias when pazopanib given with ● **SAQUINAVIR**—avoid concomitant use
- ▶ Cytotoxics: plasma concentration of pazopanib increased by **LAPATINIB**
- Grapefruit Juice: manufacturer of pazopanib advises avoid concomitant use with ● **GRAPEFRUIT JUICE**
- ▶ Lipid-regulating Drugs: separating administration from pazopanib by 12 hours advised by manufacturer of **LOMITAPIDE**
- ▶ Ulcer-healing Drugs: absorption of pazopanib possibly reduced by **HISTAMINE H<sub>2</sub>-ANTAGONISTS**—manufacturer of pazopanib advises give at least 2 hours before or 10 hours after histamine H<sub>2</sub>-antagonists; absorption of pazopanib possibly reduced by **PROTON PUMP INHIBITORS**—manufacturer of pazopanib advises give at the same time as proton pump inhibitors

**Pegfilgrastim**

- ▶ Cytotoxics: neutropenia possibly exacerbated when pegfilgrastim given with **CAPECITABINE**, **FLUOROURACIL** or **TEGAFUR**

**Peginterferon Alfa** see Interferons**Pembrolizumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Pemetrexed**

- ▶ Analgesics: renal excretion of pemetrexed possibly reduced by **NSAIDs** and **ASPIRIN**—consult product literature
- Antimalarials: antifolate effect of pemetrexed increased by ● **PYRIMETHAMINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

**Penicillamine**

- ▶ Analgesics: possible increased risk of nephrotoxicity when penicillamine given with **NSAIDs**
- ▶ Antacids: absorption of penicillamine reduced by **ANTACIDS**
- ▶ Antimalarials: increased risk of haematological toxicity when penicillamine given with **ANTIMALARIALS**—manufacturer of penicillamine advises avoid concomitant use
- Antipsychotics: increased risk of haematological toxicity when penicillamine given with ● **CLOZAPINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Cardiac Glycosides: penicillamine possibly reduces plasma concentration of **DIGOXIN**
- ▶ Iron Salts: absorption of penicillamine reduced by **oral IRON SALTS**

**Penicillamine** (continued)

- Sodium Aurothiomalate: increased risk of haematological toxicity when penicillamine given with ● **SODIUM AUROTHIOMALATE**—see under Penicillamine, p. 964)
- ▶ Zinc: penicillamine reduces absorption of **ZINC**, also absorption of penicillamine reduced by zinc

**Penicillins**

- ▶ Allopurinol: increased risk of rash when amoxicillin, ampicillin or co-amoxiclav given with **ALLOPURINOL**
- ▶ Antibacterials: absorption of phenoxymethylpenicillin reduced by **NEOMYCIN**; effects of penicillins possibly antagonised by **TETRACYCLINES**
- ▶ Anticoagulants: an interaction between broad-spectrum penicillins and **COUMARINS** and **PHENINDIONE** has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be altered
- Antiepileptics: manufacturer of pivmecillinam advises avoid concomitant use with ● **SODIUM VALPROATE** and ● **VALPROIC ACID**
- ▶ Cytotoxics: penicillins reduce excretion of **METHOTREXATE** (increased risk of toxicity)
- ▶ Muscle Relaxants: piperacillin enhances effects of **NON-DEPOLARISING MUSCLE RELAXANTS** and **SUXAMETHONIUM**
- ▶ Mycophenolate: co-amoxiclav possibly reduces plasma concentration of **MYCOPHENOLATE**
- ▶ Sulfapyrazone: excretion of penicillins reduced by **SULFINPYRAZONE**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Pentamidine Isetionate**

- Anti-arrhythmics: increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **AMIODARONE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **DISOPYRAMIDE**
  - Antibacterials: increased risk of ventricular arrhythmias when pentamidine isetionate given with *parenteral* ● **ERYTHROMYCIN**; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **MOXIFLOXACIN**—avoid concomitant use; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **DELANIDIN**; possible increased risk of ventricular arrhythmias when *parenteral* pentamidine isetionate given with ● **TELITHROMYCIN**
  - Antidepressants: avoidance of pentamidine isetionate advised by manufacturer of ● **CITALOPRAM** and ● **ESCITALOPRAM** (risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **TRICYCLICS**
  - ▶ Antifungals: possible increased risk of nephrotoxicity when pentamidine isetionate given with **AMPHOTERICIN**
  - Antimalarials: avoidance of pentamidine isetionate advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias)
  - Antipsychotics: increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **AMISULPRIDE** or ● **DROPERIDOL**—avoid concomitant use; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **PHENOTHIAZINES**
  - Antivirals: increased risk of hypocalcaemia when *parenteral* pentamidine isetionate given with ● **FOSCARNET**; increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **SAQUINAVIR**—avoid concomitant use
  - Cytotoxics: possible increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **VANDETANIB**—avoid concomitant use
  - Ivabradine: increased risk of ventricular arrhythmias when pentamidine isetionate given with ● **IVABRADINE**
- Pentazocine** see Opioid Analgesics

**Pentostatin**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: increased toxicity when pentostatin given with high-dose ● **CYCLOPHOSPHAMIDE**—avoid concomitant use; increased pulmonary toxicity when pentostatin given with ● **FLUDARABINE** (unacceptably high incidence of fatalities)

**Pentoxifylline**

- ▶ Aminophylline: pentoxifylline increases plasma concentration of **AMINOPHYLLINE**
- Analgesics: possible increased risk of bleeding when pentoxifylline given with **NSAIDs**; increased risk of bleeding when pentoxifylline given with ● **KETOROLAC** (avoid concomitant use)
- ▶ Theophylline: pentoxifylline increases plasma concentration of **THEOPHYLLINE**

**Perampanel**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of perampanel reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN** (see under Perampanel, p. 301); plasma concentration of perampanel reduced by ● **OXCARBAZEPINE**, also plasma concentration of oxcarbazepine increased (see under Perampanel, p. 301); plasma concentration of perampanel reduced by **TOPIRAMATE**
- ▶ Antifungals: plasma concentration of perampanel increased by **KETOCONAZOLE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- ▶ Anxiolytics and Hypnotics: perampanel reduces plasma concentration of **MIDAZOLAM**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: perampanel accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFc)

**Pergolide**

- ▶ Antipsychotics: effects of pergolide antagonised by **ANTIPSYCHOTICS**
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyl dopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Metoclopramide: antiparkinsonian effect of pergolide antagonised by **METOCLOPRAMIDE**

**Pericyazine** see Antipsychotics

**Perindopril** see ACE Inhibitors

**Perphenazine** see Antipsychotics

**Pertuzumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Pethidine** see Opioid Analgesics

**Phenelzine** see MAOIs

**Phenindione**

- NOTE** Change in patient's clinical condition particularly associated with liver disease, intercurrent illness, or drug administration, necessitates more frequent testing. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption may also affect anticoagulant control
- Alcohol: anticoagulant control with phenindione may be affected by major changes in consumption of ● **ALCOHOL**
  - Anabolic Steroids: anticoagulant effect of phenindione enhanced by ● **ANABOLIC STEROIDS**
  - Analgesics: anticoagulant effect of phenindione possibly enhanced by ● **NSAIDs**; increased risk of haemorrhage when anticoagulants given with **INTRAVENOUS** ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins); increased risk of bleeding when phenindione given with ● **ASPIRIN** (due to antiplatelet effect)

**Phenindione** (continued)

- Anti-arrhythmics: metabolism of phenindione inhibited by ● **AMIODARONE** (enhanced anticoagulant effect); anticoagulant effect of phenindione possibly enhanced by ● **DRONEDARONE**
- Antibacterials: experience in anticoagulant clinics suggests that INR possibly altered when phenindione is given with ● **NEOMYCIN** (given for local action on gut); anticoagulant effect of phenindione possibly enhanced by **LEVOFLOXACIN** and ● **TETRACYCLINES**; an interaction between phenindione and broad-spectrum **PENICILLINS** has not been demonstrated in studies, but common experience in anticoagulant clinics is that INR can be altered; metabolism of phenindione possibly inhibited by **SULFONAMIDES**
- Anticoagulants: increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN**, ● **EDOXABAN** and ● **RIVAROXABAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antivirals: anticoagulant effect of phenindione possibly enhanced by ● **RITONAVIR**
- Clopidogrel: anticoagulant effect of phenindione enhanced due to antiplatelet action of ● **CLOPIDOGREL**
- ▶ Corticosteroids: anticoagulant effect of phenindione may be enhanced or reduced by **CORTICOSTEROIDS**
- ▶ Cytotoxics: avoidance of phenindione advised by manufacturer of **IBRUTINIB**
- Dipyridamole: anticoagulant effect of phenindione enhanced due to antiplatelet action of ● **DIPYRIDAMOLE**
- Enteral Feeds: anticoagulant effect of phenindione antagonised by vitamin K (present in some ● **ENTERAL FEEDS**)
- ▶ Iloprost: increased risk of bleeding when phenindione given with **ILOPROST**
- Lipid-regulating Drugs: anticoagulant effect of phenindione may be enhanced or reduced by ● **COLESTYRAMINE**; anticoagulant effect of phenindione possibly enhanced by ● **ROSUVASTATIN**; anticoagulant effect of phenindione enhanced by ● **FIBRATES**
- Oestrogens: anticoagulant effect of phenindione antagonised by ● **OESTROGENS**
- ▶ Prasugrel: possible increased risk of bleeding when phenindione given with **PRASUGREL**
- Progestogens: anticoagulant effect of phenindione antagonised by ● **PROGESTOGENS**
- Testolactone: anticoagulant effect of phenindione enhanced by ● **TESTOLACTONE**
- Testosterone: anticoagulant effect of phenindione enhanced by ● **TESTOSTERONE**
- Thyroid Hormones: anticoagulant effect of phenindione enhanced by ● **THYROID HORMONES**
- Vitamins: anticoagulant effect of phenindione antagonised by ● **VITAMIN K**

**Phenobarbital**

- ▶ Alcohol: increased sedative effect when phenobarbital given with **ALCOHOL**
- Aminophylline: phenobarbital accelerates metabolism of ● **AMINOPHYLLINE** (reduced effect)
- ▶ Analgesics: phenobarbital reduces plasma concentration of **METHADONE**; phenobarbital possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- Anthelmintics: phenobarbital reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections
- Anti-arrhythmics: phenobarbital accelerates metabolism of **DISOPYRAMIDE** (reduced plasma concentration); phenobarbital possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use; phenobarbital possibly accelerates metabolism of **PROPafenone**
- Antibacterials: phenobarbital accelerates metabolism of **METRONIDAZOLE** (reduced effect); phenobarbital possibly reduces plasma concentration of **RIFAMPICIN**; phenobarbital accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); phenobarbital possibly accelerates metabolism of ● **CHLORAMPHENICOL** (reduced plasma concentration); phenobarbital reduces plasma concentration

**Phenobarbital**

- **Antibacterials** (continued)
  - of ● **TELITHROMYCIN** (avoid during and for 2 weeks after phenobarbital)
- **Anticoagulants**: phenobarbital possibly reduces plasma concentration of ● **APIXABAN** and ● **EDOXABAN**; phenobarbital accelerates metabolism of ● **COUMARINS** (reduced anticoagulant effect); phenobarbital possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- **Antidepressants**: phenobarbital possibly reduces plasma concentration of **REBOXETINE**; phenobarbital reduces plasma concentration of **PAROXETINE**; phenobarbital accelerates metabolism of ● **MIANSERIN** (reduced plasma concentration); anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered); plasma concentration of phenobarbital possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; phenobarbital possibly accelerates metabolism of ● **TRICYCLICS** (reduced plasma concentration)
- **Antiepileptics**: phenobarbital reduces plasma concentration of **BRIVARACETAM**, **LAMOTRIGINE**, **TIAGABINE** and **ZONISAMIDE**; plasma concentration of phenobarbital possibly increased by **CARBAMAZEPINE**; phenobarbital possibly reduces plasma concentration of **ETHOSUXIMIDE**, **RUFINAMIDE** and **TOPIRAMATE**; plasma concentration of phenobarbital often increased by **FOSPHENYTOIN** and **PHENYTOIN**, plasma concentration of fosphenytoin and phenytoin often reduced but may be increased; plasma concentration of phenobarbital increased by **OXCARBAZEPINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; plasma concentration of phenobarbital increased by **SODIUM VALPROATE** and **VALPROIC ACID** (also plasma concentration of sodium valproate and valproic acid reduced); plasma concentration of phenobarbital increased by ● **STIRIPENTOL**
- **Antifungals**: phenobarbital possibly reduces plasma concentration of ● **ISAVUCONAZOLE** and ● **VORICONAZOLE**—avoid concomitant use; phenobarbital possibly reduces plasma concentration of **ITRACONAZOLE** and ● **POSACONAZOLE**; phenobarbital reduces absorption of **GRISEOFULVIN** (reduced effect)
- **Antimalarials**: avoidance of phenobarbital advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- **Antimuscarinics**: phenobarbital possibly reduces plasma concentration of active metabolite of ● **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- **Antipsychotics**: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); phenobarbital accelerates metabolism of **HALOPERIDOL** (reduced plasma concentration); plasma concentration of both drugs reduced when phenobarbital given with **CHLORPROMAZINE**; phenobarbital possibly reduces plasma concentration of ● **ARIPIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); phenobarbital possibly reduces plasma concentration of **CLOZAPINE**; phenobarbital possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- **Antivirals**: phenobarbital possibly reduces plasma concentration of **ABACAVIR**, **DARUNAVIR**, **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR** and ● **SAQUINAVIR**; avoidance of phenobarbital advised by manufacturer of ● **BOCEPREVIR** and ● **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); phenobarbital possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; phenobarbital possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—avoid concomitant use; phenobarbital possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); avoidance of phenobarbital advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**

**Phenobarbital** (continued)

- ▶ **Anxiolytics and Hypnotics**: increased sedative effect when phenobarbital given with **ANXIOLYTICS AND HYPNOTICS**; phenobarbital often reduces plasma concentration of **CLONAZEPAM**
- **Apremilast**: phenobarbital possibly reduces plasma concentration of ● **APREMILAST**—avoid concomitant use
- ▶ **Aprepitant**: phenobarbital possibly reduces plasma concentration of **APREPITANT**
- ▶ **Avanafil**: phenobarbital possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- ▶ **Beta-blockers**: phenobarbital possibly reduces plasma concentration of **PROPRANOLOL**
- **Bile Acids**: avoidance of phenobarbital advised by manufacturer of ● **CHOLIC ACID**
- ▶ **Caffeine citrate**: effects of phenobarbital possibly antagonised by **CAFFEINE CITRATE**
- **Calcium-channel Blockers**: phenobarbital probably reduces effects of ● **CALCIUM-CHANNEL BLOCKERS**; avoidance of phenobarbital advised by manufacturer of **ISRADIPINE**; avoidance of phenobarbital advised by manufacturer of ● **NIMODIPINE** (plasma concentration of nimodipine reduced)
- **Cannabis Extract**: phenobarbital possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- **Ciclosporin**: phenobarbital accelerates metabolism of ● **CYCLOSPORIN** (reduced plasma concentration)
- **Cobicistat**: phenobarbital possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- **Corticosteroids**: phenobarbital accelerates metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- **Cytotoxics**: phenobarbital possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); phenobarbital possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CRIZOTINIB** and **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib and ponatinib advises avoid concomitant use; phenobarbital possibly reduces plasma concentration of ● **CABOZANTINIB** and ● **CERITINIB**—avoid concomitant use; avoidance of phenobarbital advised by manufacturer of ● **CABAZITAXEL**, **DABRAFENIB**, **GEFITINIB** and ● **OLAPARIB**; avoidance of phenobarbital advised by manufacturer of **DASATINIB** and **VANDETANIB** (plasma concentration of dasatinib and vandetanib possibly reduced); phenobarbital possibly reduces plasma concentration of **ETOPOSIDE**; phenobarbital reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when phenobarbital given with **PROCARBAZINE**
- **Diuretics**: phenobarbital reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use; increased risk of osteomalacia when phenobarbital given with **CARBONIC ANHYDRASE INHIBITORS**
- ▶ **Folates**: plasma concentration of phenobarbital possibly reduced by **FOLATES**
- ▶ **Fosaprepitant**: phenobarbital possibly reduces plasma concentration of **FOSAPREPITANT**
- **Guanfacine**: phenobarbital possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- **Hormone Antagonists**: phenobarbital possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; phenobarbital accelerates metabolism of **TOREMIFENE** (reduced plasma concentration)
- **Ivacaftor**: phenobarbital possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ **Leukotriene Receptor Antagonists**: phenobarbital reduces plasma concentration of **MONTELUKAST**
- ▶ **Lumacaftor**: plasma concentration of phenobarbital possibly reduced by **LUMACAFTOR**—manufacturer of lumacaftor advises avoid concomitant use
- **Oestrogens**: phenobarbital accelerates metabolism of ● **ESTROGENS** (reduced contraceptive effect with combined

**Phenobarbital**

- Oestrogens (continued)
  - oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Panobinostat: avoidance of phenobarbital advised by manufacturer of ● **PANOBINOSTAT**
- Progestogens: phenobarbital accelerates metabolism of
  - **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)
- ▶ Roflumilast: phenobarbital possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- ▶ Sodium Oxybate: avoidance of phenobarbital advised by manufacturer of **SODIUM OXYBATE**
- ▶ Sympathomimetics: plasma concentration of phenobarbital possibly increased by **METHYLPHENIDATE**
- Tacrolimus: phenobarbital reduces plasma concentration of ● **TACROLIMUS**
- Theophylline: phenobarbital accelerates metabolism of ● **THEOPHYLLINE** (reduced effect)
- ▶ Thyroid Hormones: phenobarbital accelerates metabolism of **THYROID HORMONES** (may increase requirements for thyroid hormones in hypothyroidism)
- ▶ Ticagrelor: phenobarbital possibly reduces plasma concentration of **TICAGRELOR**
- Ulipristal: avoidance of phenobarbital advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- ▶ Vitamins: phenobarbital possibly increases requirements for **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

**Phenothiazines** see Antipsychotics**Phenoxybenzamine** see Alpha-blockers**Phenoxymethylpenicillin** see Penicillins**Phentolamine** see Alpha-blockers**Phenylephrine** see Sympathomimetics**Phenytoin**

- ▶ Alcohol: plasma concentration of phenytoin possibly reduced by chronic heavy consumption of **ALCOHOL**
- Aminophylline: plasma concentration of both drugs reduced when phenytoin given with ● **AMINOPHYLLINE**
- Analgesics: excretion of phenytoin possibly reduced by **ACETAMIN** (increased risk of toxicity); phenytoin possibly accelerates metabolism of **FENTANYL** (reduced effect); phenytoin accelerates metabolism of **METHADONE** (reduced effect and risk of withdrawal effects); phenytoin possibly increases risk of ● **PETHIDINE** toxicity; effects of phenytoin enhanced by **ASPIRIN**; phenytoin possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- ▶ Antacids: absorption of phenytoin reduced by **ANTACIDS**
- Anthelmintics: phenytoin reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections; plasma concentration of phenytoin possibly increased by **LEVAMISOLE**
- Anti-arrhythmics: metabolism of phenytoin inhibited by ● **AMIODARONE** (increased plasma concentration); phenytoin reduces plasma concentration of **DISOPYRAMIDE**; phenytoin possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use
- Antibacterials: metabolism of phenytoin inhibited by **CLARITHROMYCIN** (increased plasma concentration); metabolism of phenytoin possibly inhibited by **METRONIDAZOLE** (increased plasma concentration); plasma concentration of phenytoin increased or decreased by **CIPROFLOXACIN**; phenytoin accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); phenytoin possibly reduces plasma concentration of ● **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use;

**Phenytoin**

- Antibacterials (continued)
  - plasma concentration of phenytoin increased by ● **CHLORAMPHENICOL** (increased risk of toxicity); metabolism of phenytoin possibly inhibited by **ISONIAZID** (increased risk of toxicity); metabolism of phenytoin accelerated by ● **RIFAMYCINS** (reduced plasma concentration); plasma concentration of phenytoin possibly increased by **SULFONAMIDES**; phenytoin reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after phenytoin); plasma concentration of phenytoin increased by ● **TRIMETHOPRIM** (also increased antifolate effect)
- Anticoagulants: phenytoin possibly reduces plasma concentration of ● **APIXABAN** and ● **EDOXABAN**; phenytoin accelerates metabolism of ● **COUMARINS** (possibility of reduced anticoagulant effect, but enhancement also reported); phenytoin possibly reduces plasma concentration of **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; phenytoin possibly reduces plasma concentration of **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: plasma concentration of phenytoin increased by ● **FLUOXETINE** and ● **FLUVOXAMINE**; phenytoin reduces plasma concentration of ● **MIANSERIN**, **MIRTAZAPINE** and **PAROXETINE**; plasma concentration of phenytoin possibly increased by **SERTRALINE**, also plasma concentration of sertraline possibly reduced; anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered); plasma concentration of phenytoin possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **TRICYCLICS**; phenytoin possibly reduces plasma concentration of ● **VORTIOXETINE**—consider increasing dose of vortioxetine
- ▶ Antidiabetics: plasma concentration of phenytoin transiently increased by **TOLBUTAMIDE** (possibility of toxicity)
- Antiepileptics: phenytoin reduces plasma concentration of **BRIVARACETAM**, **LAMOTRIGINE**, **TIAGABINE** and **ZONISAMIDE**; plasma concentration of both drugs often reduced when phenytoin given with **CARBAMAZEPINE**, also plasma concentration of phenytoin may be increased; phenytoin reduces plasma concentration of **ELICARBAZEPINE**, also plasma concentration of phenytoin increased; plasma concentration of phenytoin possibly increased by ● **ETHOSUXIMIDE**, also plasma concentration of ethosuximide possibly reduced; plasma concentration of phenytoin increased by **OXCARBAZEPINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; phenytoin reduces plasma concentration of ● **PERAMPANEL** (see under Perampanel, p. 301); phenytoin often increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE**, plasma concentration of phenytoin often reduced but may be increased; phenytoin possibly reduces plasma concentration of **RETIGABINE**; phenytoin possibly reduces plasma concentration of **RUFINAMIDE**, also plasma concentration of phenytoin possibly increased; plasma concentration of phenytoin increased or possibly reduced when given with **SODIUM VALPROATE** and **VALPROIC ACID**, also plasma concentration of sodium valproate and valproic acid reduced; plasma concentration of phenytoin increased by ● **STIRIPENTOL**; plasma concentration of phenytoin increased by ● **TOPIRAMATE** (also plasma concentration of topiramate reduced); plasma concentration of phenytoin reduced by **VIGABATRIN**
- Antifungals: phenytoin reduces plasma concentration of ● **KETOCONAZOLE** and ● **POSACONAZOLE**; anticonvulsant effect of phenytoin enhanced by ● **MICONAZOLE** (plasma concentration of phenytoin increased); plasma concentration of phenytoin increased by ● **FLUCONAZOLE** (consider reducing dose of phenytoin); phenytoin possibly reduces plasma concentration of ● **ISAVUCONAZOLE**—avoid concomitant use; phenytoin reduces plasma concentration of ● **TRACONAZOLE**—avoid concomitant use; plasma concentration of phenytoin increased by ● **VORICONAZOLE**, also phenytoin reduces plasma

**Phenytoin**

- **Antifungals** (continued)
  - concentration of voriconazole (increase dose of voriconazole and also monitor for phenytoin toxicity); phenytoin possibly reduces plasma concentration of **CASPOFUNGIN**—consider increasing dose of caspofungin
- **Antimalarials**: avoidance of phenytoin advised by manufacturer of **ARTEMIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**; anticonvulsant effect of phenytoin antagonised by ● **PYRIMETHAMINE**, also increased antifolate effect
- **Antimuscarinics**: phenytoin possibly reduces plasma concentration of active metabolite of ● **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- **Antipsychotics**: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); phenytoin reduces plasma concentration of **HALOPERIDOL**; plasma concentration of phenytoin possibly increased or decreased by **CHLORPRMAZINE**; phenytoin possibly reduces plasma concentration of ● **ARIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); phenytoin accelerates metabolism of **FLAZAPINE** and **QUETIAPINE** (reduced plasma concentration); phenytoin possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- **Antivirals**: phenytoin possibly reduces plasma concentration of **ABACAVIR**, **DARUNAVIR**, **LOPINAVIR** and **SAQUINAVIR**; avoidance of phenytoin advised by manufacturer of ● **BOCEPREVIR** and ● **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); phenytoin possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—avoid concomitant use; phenytoin possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); avoidance of phenytoin advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOBSUVIR** and ● **TELAPREVIR**; phenytoin possibly reduces plasma concentration of ● **INDINAVIR**, also plasma concentration of phenytoin possibly increased; phenytoin possibly reduces plasma concentration of **RITONAVIR**, also plasma concentration of phenytoin possibly affected; plasma concentration of phenytoin increased or decreased by **ZIDOVUDINE**
- ▶ **Anxiolytics and Hypnotics**: phenytoin often reduces plasma concentration of **CLONAZEPAM**; plasma concentration of phenytoin increased or decreased by **DIAZEPAM**; plasma concentration of phenytoin possibly increased or decreased by **BENZODIAZEPINES**
- **Apremilast**: phenytoin possibly reduces plasma concentration of ● **APREMILAST**—avoid concomitant use
- ▶ **Aprepitant**: phenytoin possibly reduces plasma concentration of **APREPITANT**
- ▶ **Bupropion**: phenytoin reduces plasma concentration of **BUPROPION**
- ▶ **Caffeine citrate**: phenytoin reduces plasma concentration of **CAFFEINE CITRATE**
- **Calcium-channel Blockers**: phenytoin reduces effects of **FELODIPINE** and **VERAPAMIL**; avoidance of phenytoin advised by manufacturer of **ISRADIPINE**; avoidance of phenytoin advised by manufacturer of **NIMODIPINE** (plasma concentration of nimodipine possibly reduced); plasma concentration of phenytoin increased by ● **DILTIAZEM** but also effect of diltiazem reduced
- **Cannabis Extract**: phenytoin possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- ▶ **Cardiac Glycosides**: phenytoin possibly reduces plasma concentration of **DIGOXIN**
- **Ciclosporin**: phenytoin accelerates metabolism of ● **CICLOSPORIN** (reduced plasma concentration)
- **Cobicistat**: phenytoin possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use

**Phenytoin** (continued)

- **Corticosteroids**: phenytoin accelerates metabolism of
  - **CORTICOSTEROIDS** (reduced effect)
- **Cytotoxics**: phenytoin possibly reduces plasma concentration of **BUSULFAN**, **ERIBULIN** and **ETOPOSIDE**; metabolism of phenytoin possibly inhibited by **CAPECITABINE**, **FLUOROURACIL** and **TEGAFUR** (increased risk of toxicity); phenytoin increases antifolate effect of **METHOTREXATE**; plasma concentration of phenytoin possibly reduced by **CISPLATIN**; phenytoin possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); phenytoin possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CRIZOTINIB**, ● **IBRUTINIB**, ● **IDELALISIB** and **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib, ibrutinib, idelalisib and ponatinib advises avoid concomitant use; phenytoin possibly reduces plasma concentration of ● **CABOZANTINIB** and ● **CERITINIB**—avoid concomitant use; avoidance of phenytoin advised by manufacturer of ● **CABAZITAXEL**, **DABRAFENIB**, **GEFITINIB**, ● **LAPATINIB**, ● **OLAPARIB** and **VEMURAFENIB**; avoidance of phenytoin advised by manufacturer of **DASATINIB** and ● **VISMODEGIB** (plasma concentration of dasatinib and vismodegib possibly reduced); phenytoin reduces plasma concentration of ● **IMATINIB**—avoid concomitant use; phenytoin reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procarbazine advises possibly increased risk of hypersensitivity reactions when phenytoin given with **PROCARBAZINE**
- **Dexrazoxane**: absorption of phenytoin possibly reduced by ● **DEXRAZOAXANE**
  - ▶ **Diazoxide**: plasma concentration of phenytoin reduced by **DIAZOXIDE**, also effect of diazoxide may be reduced
- **Disulfiram**: metabolism of phenytoin inhibited by ● **DISULFIRAM** (increased risk of toxicity)
- **Diuretics**: phenytoin reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use; plasma concentration of phenytoin possibly increased by ● **ACETAZOLAMIDE**; phenytoin antagonises effects of **FUROSEMIDE**; increased risk of osteomalacia when phenytoin given with **CARBONIC ANHYDRASE INHIBITORS**
- ▶ **Dopaminergics**: phenytoin possibly reduces effects of **CO-BENELDOPA**, **CO-CARELDOPA** and **LEVODOPA**
- ▶ **Enteral Feeds**: absorption of phenytoin possibly reduced by **ENTERAL FEEDS**
- ▶ **Folates**: plasma concentration of phenytoin possibly reduced by **FOLATES**
- ▶ **Fosaprepitant**: phenytoin possibly reduces plasma concentration of **FOSAPREPITANT**
- **Guanfacine**: phenytoin possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- **Hormone Antagonists**: phenytoin possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; phenytoin possibly accelerates metabolism of **TOREMIFENE**
- ▶ **5HT<sub>2</sub>-receptor Antagonists**: phenytoin accelerates metabolism of **ONDANSETRON** (reduced effect)
- **Ivacaftor**: phenytoin possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ **Leflunomide**: plasma concentration of phenytoin possibly increased by **LEFLUNOMIDE**
- ▶ **Lipid-regulating Drugs**: absorption of phenytoin possibly reduced by **COLESEVELAM**; combination of phenytoin with **FLUVASTATIN** may increase plasma concentration of either drug (or both)
- ▶ **Lithium**: neurotoxicity may occur when phenytoin given with **LITHIUM** without increased plasma concentration of lithium
- ▶ **Lumacaftor**: plasma concentration of phenytoin possibly reduced by **LUMACAFTOR**—manufacturer of lumacaftor advises avoid concomitant use
- ▶ **Macitentan**: avoidance of phenytoin advised by manufacturer of **MACITENTAN**
- ▶ **Modafinil**: plasma concentration of phenytoin possibly increased by **MODAFINIL**
- **Muscle Relaxants**: *long-term use* of phenytoin reduces effects of ● **NON-DEPOLARISING MUSCLE RELAXANTS** (but *acute use* of

**Phenytoin**

- Muscle Relaxants (continued)  
phenytoin might increase effects of non-depolarising muscle relaxants)
- Oestrogens: phenytoin accelerates metabolism of
  - **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Panobinostat: avoidance of phenytoin advised by manufacturer of ● **PANOBINOSTAT**
- Progestogens: phenytoin accelerates metabolism of
  - **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)
- ▶ Roflumilast: phenytoin possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- Sulfipyrazone: plasma concentration of phenytoin increased by ● **SULFINPYRAZONE**
- ▶ Sympathomimetics: plasma concentration of phenytoin increased by **METHYLPHENIDATE**
- ▶ Tacrolimus: phenytoin reduces plasma concentration of **TACROLIMUS**, also plasma concentration of phenytoin possibly increased
- Theophylline: plasma concentration of both drugs reduced when phenytoin given with ● **THEOPHYLLINE**
- ▶ Thyroid Hormones: phenytoin accelerates metabolism of **THYROID HORMONES** (may increase requirements in hypothyroidism), also plasma concentration of phenytoin possibly increased
- ▶ Tibolone: phenytoin accelerates metabolism of **TIBOLONE**
- ▶ Ticagrelor: phenytoin possibly reduces plasma concentration of **TICAGRELOR**
- Ulcer-healing Drugs: metabolism of phenytoin inhibited by ● **CIMETIDINE** (increased plasma concentration); effects of phenytoin enhanced by ● **ESOMEPRAZOLE**; effects of phenytoin possibly enhanced by **OMEPRAZOLE**; absorption of phenytoin reduced by ● **SUCRALFATE**
- Ulipristal: avoidance of phenytoin advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- ▶ Vaccines: effects of phenytoin enhanced by **INFLUENZA VACCINE**
- ▶ Vitamins: phenytoin possibly increases requirements for **ALFACALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

**Pholcodine**

- ▶ Antidepressants: manufacturer of pholcodine advises avoid for 2 weeks after stopping **MAOIs**

**Phosphodiesterase Type-3 Inhibitors**

- Anagrelide: avoidance of enoximone and milrinone advised by manufacturer of ● **ANAGRELIDE**

**Pilocarpine** see Parasympathomimetics**Pimozide** see Antipsychotics**Pindolol** see Beta-blockers**Pioglitazone** see Antidiabetics**Piperacillin** see Penicillins**Piperaquine** see Arteminol with Piperaquine**Pirfenidone**

- Antibacterials: plasma concentration of pirfenidone increased by ● **CIPROFLOXACIN**—see under Pirfenidone, p. 279
- Antidepressants: plasma concentration of pirfenidone increased by ● **FLUVOXAMINE**—manufacturer of pirfenidone advises avoid concomitant use
- ▶ Grapefruit Juice: manufacturer of pirfenidone advises avoid concomitant use with **GRAPEFRUIT JUICE**

**Piroxicam** see NSAIDs**Pivmecillinam** see Penicillins**Pixantrone**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when cytotoxic antibiotics given with live ● **VACCINES**—avoid concomitant use

**Pizotifen**

- ▶ Adrenergic Neuron Blockers: pizotifen antagonises hypotensive effect of **ADRENERGIC NEURONE BLOCKERS**

**Platinum Compounds**

- Aldesleukin: avoidance of cisplatin advised by manufacturer of ● **ALDESLEUKIN**
- Antibacterials: increased risk of nephrotoxicity and possibly of ototoxicity when platinum compounds given with ● **AMINOGLYCOSIDES** or ● **POLYMYXINS**; increased risk of nephrotoxicity and ototoxicity when platinum compounds given with **CAPREOMYCIN**; increased risk of nephrotoxicity and possibly of ototoxicity when cisplatin given with **VANCOMYCIN**
- ▶ Antiepileptics: cisplatin possibly reduces plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: increased risk of toxicity when cisplatin given with **IFOSFAMIDE**; increased pulmonary toxicity when cisplatin given with ● **BLEOMYCIN** and ● **METHOTREXATE**; avoidance of oxaliplatin advised by manufacturer of ● **PANTUMUMAB**
- ▶ Diuretics: increased risk of nephrotoxicity and ototoxicity when platinum compounds given with **DIURETICS**

**Pneumococcal Vaccine** see Vaccines**Polioimyelitis Vaccine** see Vaccines**Polymyxins**

- ▶ Antibacterials: increased risk of nephrotoxicity when colistimethate sodium or polymyxins given with **AMINOGLYCOSIDES**; increased risk of nephrotoxicity when colistimethate sodium or polymyxins given with **CAPREOMYCIN**; increased risk of nephrotoxicity when polymyxins given with **VANCOMYCIN**; increased risk of nephrotoxicity and ototoxicity when colistimethate sodium given with **VANCOMYCIN**
- ▶ Antifungals: increased risk of nephrotoxicity when polymyxins given with **AMPHOTERICIN**
- Ciclosporin: increased risk of nephrotoxicity when polymyxins given with ● **CYCLOSPORIN**
- Cytotoxics: increased risk of nephrotoxicity and possibly of ototoxicity when polymyxins given with ● **PLATINUM COMPOUNDS**
- Diuretics: increased risk of toxicity when polymyxins given with ● **LOOP DIURETICS**
- Muscle Relaxants: polymyxins enhance effects of ● **NON-DEPOLARISING MUSCLE RELAXANTS** and ● **SUXAMETHONIUM**
- Parasympathomimetics: polymyxins antagonise effects of ● **NEOSTIGMINE** and ● **PYRIDOSTIGMINE**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Polysaccharide-iron Complex** see Iron salts**Polystyrene Sulfonate Resins**

- ▶ Antacids: risk of intestinal obstruction when polystyrene sulfonate resins given with **ALUMINIUM HYDROXIDE**; risk of metabolic alkalosis when polystyrene sulfonate resins given with **ORAL MAGNESIUM SALTS**
- ▶ Thyroid Hormones: polystyrene sulfonate resins reduce absorption of **LEVOTHYROXINE**

**Pomalidomide**

- Antidepressants: plasma concentration of pomalidomide increased by ● **FLUVOXAMINE**

**Ponatinib**

- Antibacterials: plasma concentration of ponatinib possibly increased by **CLARITHROMYCIN** and **TELITHROMYCIN**—consider reducing initial dose of ponatinib (see under Ponatinib, p. 873); plasma concentration of ponatinib possibly reduced by **RIFABUTIN**—manufacturer of ponatinib advises avoid concomitant use; plasma concentration of ponatinib reduced by ● **RIFAMPICIN**—manufacturer of ponatinib advises avoid concomitant use
- ▶ Antidepressants: plasma concentration of ponatinib possibly reduced by **ST JOHN'S WORT**—manufacturer of ponatinib advises avoid concomitant use
- ▶ Antiepileptics: plasma concentration of ponatinib possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**—manufacturer of ponatinib advises avoid concomitant use

**Ponatinib** (continued)

- Antifungals: plasma concentration of ponatinib increased by **KETOCONAZOLE**; plasma concentration of ponatinib possibly increased by **ITRACONAZOLE** and **VORICONAZOLE**—consider reducing initial dose of ponatinib (see under Ponatinib, p. 873)
- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of ponatinib possibly increased by **INDINAVIR**, **RITONAVIR** and **SAQUINAVIR**—consider reducing initial dose of ponatinib (see under Ponatinib, p. 873)
- Grapefruit Juice: plasma concentration of ponatinib possibly increased by **GRAPEFRUIT JUICE**

**Posaconazole** see Antifungals, Triazole

**Potassium Canrenoate** see Diuretics

**Potassium Aminobenzoate**

- Antibacterials: potassium aminobenzoate inhibits effects of **SULFONAMIDES**

**Potassium Bicarbonate** see Potassium Salts

**Potassium Chloride** see Potassium Salts

**Potassium Citrate** see Potassium Salts

**Potassium Salts**

**NOTE** Includes salt substitutes

- ACE Inhibitors: increased risk of severe hyperkalaemia when potassium salts given with ● **ACE INHIBITORS**
- Aliskiren: increased risk of hyperkalaemia when potassium salts given with **ALISKIREN**
- Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when potassium salts given with
  - **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- Antibacterials: avoid concomitant use of potassium citrate with **METHENAMINE**
- Ciclosporin: increased risk of hyperkalaemia when potassium salts given with ● **CICLOSPORIN**
- Diuretics: increased risk of hyperkalaemia when potassium salts given with ● **ALDOSTERONE ANTAGONISTS** or ● **POTASSIUM-SPARING DIURETICS**
- Tacrolimus: increased risk of hyperkalaemia when potassium salts given with ● **TACROLIMUS**
- Ulcer-healing Drugs: avoidance of potassium citrate advised by manufacturer of **SUCRALFATE**

**Pramipexole**

- Antipsychotics: manufacturer of pramipexole advises avoid concomitant use of **ANTIPSYCHOTICS** (antagonism of effect)
- Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- Methyldopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- Ulcer-healing Drugs: excretion of pramipexole reduced by **CIMETIDINE** (increased plasma concentration)

**Prasugrel**

- Analgesics: possible increased risk of bleeding when prasugrel given with **NSAIDS**
- Anticoagulants: possible increased risk of bleeding when prasugrel given with **COUMARINS** or **PHENINDIONE**
- Clopidogrel: possible increased risk of bleeding when prasugrel given with **CLOPIDOGREL**

**Pravastatin** see Statins

**Praziquantel**

- Antibacterials: plasma concentration of praziquantel reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antiepileptics: plasma concentration of praziquantel reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—consider increasing praziquantel dose when given for systemic infections
- Antifungals: plasma concentration of praziquantel increased by **KETOCONAZOLE**
- Antimalarials: plasma concentration of praziquantel reduced by ● **CHLOROQUINE**—consider increasing praziquantel dose when given for systemic infections
- Corticosteroids: plasma concentration of praziquantel possibly reduced by continuous use of **DEXAMETHASONE**
- Grapefruit Juice: plasma concentration of praziquantel increased by **GRAPEFRUIT JUICE**

**Praziquantel** (continued)

- Ulcer-healing Drugs: plasma concentration of praziquantel increased by **CIMETIDINE**

**Prazosin** see Alpha-blockers

**Prednisolone** see Corticosteroids

**Prednisone** see Corticosteroids

**Pregabalin**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

**Prilocaline**

- Anti-arrhythmics: increased myocardial depression when prilocaline given with **ANTI-ARRHYTHMICS**
- Antibacterials: increased risk of methaemoglobinemia when prilocaline given with **SULFONAMIDES**

**Primaquine**

- Antimalarials: avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**
- Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- Mepacrine: plasma concentration of primaquine increased by **MEPACRINE** (increased risk of toxicity)
- Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Primidone**

- Alcohol: increased sedative effect when primidone given with **ALCOHOL**
- Aminophylline: primidone accelerates metabolism of ● **AMINOPHYLLINE** (reduced effect)
- Analgesics: primidone reduces plasma concentration of **METHADONE**; primidone possibly accelerates metabolism of **PARACETAMOL** (also isolated reports of hepatotoxicity)
- Anthelmintics: primidone reduces plasma concentration of ● **ALBENDAZOLE** and ● **PRAZIQUANTEL**—consider increasing albendazole and praziquantel dose when given for systemic infections
- Anti-arrhythmics: primidone accelerates metabolism of **DISOPYRAMIDE** (reduced plasma concentration); primidone possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use; primidone possibly accelerates metabolism of **PROPafenone**
- Antibacterials: primidone accelerates metabolism of **METRONIDAZOLE** (reduced effect); primidone possibly reduces plasma concentration of **RIFAMPICIN**; primidone accelerates metabolism of **DOXYCYCLINE** (reduced plasma concentration); primidone possibly accelerates metabolism of ● **CHLORAMPHENICOL** (reduced plasma concentration); primidone reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after primidone)
- Anticoagulants: primidone possibly reduces plasma concentration of ● **APIXABAN** and ● **EDOXABAN**; primidone accelerates metabolism of ● **COUMARINS** (reduced anticoagulant effect); primidone possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: primidone possibly reduces plasma concentration of **REBOXETINE**; primidone reduces plasma concentration of **PAROXETINE**; primidone accelerates metabolism of ● **MIANSERIN** (reduced plasma concentration); anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered); plasma concentration of

**Primidone**

- Antidepressants (continued)
  - primidone possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use; primidone possibly accelerates metabolism of ● **TRICYCLICS** (reduced plasma concentration)
- Antiepileptics: primidone reduces plasma concentration of **BRIVARACETAM**, **LAMOTRIGINE**, **TIAGABINE** and **ZONISAMIDE**; plasma concentration of primidone possibly increased by **CARBAMAZEPINE**; primidone possibly reduces plasma concentration of **ETHOSUXIMIDE**, **RUFINAMIDE** and **TOPIRAMATE**; plasma concentration of primidone often increased by **FOSPHENYTOIN** and **PHENYTOIN**, plasma concentration of fosphenytoin and phenytoin often reduced but may be increased; plasma concentration of primidone increased by **OXCARBAZEPINE**, also plasma concentration of an active metabolite of oxcarbazepine reduced; plasma concentration of primidone increased by **SODIUM VALPROATE** and **VALPROIC ACID** (also plasma concentration of sodium valproate and valproic acid reduced); plasma concentration of primidone increased by ● **STIRIPENTOL**
- Antifungals: primidone possibly reduces plasma concentration of ● **ISAVUCONAZOLE** and ● **VORICONAZOLE**—avoid concomitant use; primidone possibly reduces plasma concentration of **ITRACONAZOLE** and ● **POSACONAZOLE**; primidone reduces absorption of **GRISEOFULVIN** (reduced effect)
- Antimalarials: avoidance of primidone advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; anticonvulsant effect of antiepileptics antagonised by ● **MEFLUQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); primidone accelerates metabolism of **HALOPERIDOL** (reduced plasma concentration); plasma concentration of both drugs reduced when primidone given with **CHLORPROMAZINE**; primidone possibly reduces plasma concentration of ● **ARIPIRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); primidone possibly reduces plasma concentration of **CLOZAPINE**; primidone possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- Antivirals: primidone possibly reduces plasma concentration of **ABACAVIR**, **DARUNAVIR**, **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR** and ● **SAQUINAVIR**; avoidance of primidone advised by manufacturer of ● **BOCEPREVIR** and ● **RILPIVIRINE** (plasma concentration of boceprevir and rilpivirine possibly reduced); primidone possibly reduces plasma concentration of ● **DACLATASVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; primidone possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR** and ● **PARITAPREVIR**—avoid concomitant use; primidone possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); avoidance of primidone advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**
- ▶ Anxiolytics and Hypnotics: increased sedative effect when primidone given with **ANXIOLYTICS AND HYPNOTICS**; primidone often reduces plasma concentration of **CLONAZEPAM**
- ▶ Aprepitant: primidone possibly reduces plasma concentration of **APREPITANT**
- ▶ Avanafil: primidone possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- ▶ Beta-blockers: primidone possibly reduces plasma concentration of **PROPRANOLOL**
- ▶ Caffeine citrate: effects of primidone possibly antagonised by **CAFFEINE CITRATE**
- Calcium-channel Blockers: primidone probably reduces effects of ● **CALCIUM-CHANNEL BLOCKERS**; avoidance of primidone advised by manufacturer of **ISRADIPINE**; avoidance of primidone advised by manufacturer of ● **NIMODIPINE** (plasma concentration of nimodipine reduced)
- Cannabis Extract: primidone possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- Cyclosporin: primidone accelerates metabolism of ● **CYCLOSPORIN** (reduced plasma concentration)

**Primidone** (continued)

- Cobicistat: primidone possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Corticosteroids: primidone accelerates metabolism of ● **CORTICOSTEROIDS** (reduced effect)
- Cytotoxics: primidone possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); primidone possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CRIZOTINIB** and **PONATINIB**—manufacturer of bortezomib, bosutinib, crizotinib and ponatinib advises avoid concomitant use; primidone possibly reduces plasma concentration of ● **CABOZANTINIB** and ● **CERITINIB**—avoid concomitant use; avoidance of primidone advised by manufacturer of ● **CABAZITAXEL**, **DABRAFENIB** and **GEFITINIB**; avoidance of primidone advised by manufacturer of **DASATINIB** and **VANDETANIB** (plasma concentration of dasatinib and vandetanib possibly reduced); primidone possibly reduces plasma concentration of **ETOPOSIDE**; primidone reduces plasma concentration of **IRINOTECAN** and its active metabolite; manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when primidone given with **PROCARBAZINE**
- Diuretics: primidone reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use; increased risk of osteomalacia when primidone given with **CARBONIC ANHYDRASE INHIBITORS**
- ▶ Folates: plasma concentration of primidone possibly reduced by **FOLATES**
- ▶ Fosaprepitant: primidone possibly reduces plasma concentration of **FOSAPREPITANT**
- Guanfacine: primidone possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Hormone Antagonists: primidone possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; primidone accelerates metabolism of **TOREMIFENE** (reduced plasma concentration)
- Ivacaftor: primidone possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ Leukotriene Receptor Antagonists: primidone reduces plasma concentration of **MONTELUKAST**
- ▶ Lumacaftor: plasma concentration of primidone possibly reduced by **LUMACAFTOR**—manufacturer of lumacaftor advises avoid concomitant use
- Oestrogens: primidone accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Panobinostat: avoidance of primidone advised by manufacturer of ● **PANOBINOSTAT**
- Progestogens: primidone accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)
- ▶ Roflumilast: primidone possibly inhibits effects of **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- ▶ Sodium Oxybate: avoidance of primidone advised by manufacturer of **SODIUM OXYBATE**
- ▶ Sympathomimetics: plasma concentration of primidone possibly increased by **METHYLPHENIDATE**
- Tacrolimus: primidone reduces plasma concentration of ● **TACROLIMUS**
- Theophylline: primidone accelerates metabolism of ● **THEOPHYLLINE** (reduced effect)
- Thyroid Hormones: primidone accelerates metabolism of **THYROID HORMONES** (may increase requirements for thyroid hormones in hypothyroidism)
- ▶ Ticagrelor: primidone possibly reduces plasma concentration of **TICAGRELOR**

**Primidone** (continued)

- Ulipristal: avoidance of primidone advised by manufacturer of
  - **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- ▶ Vitamins: primidone possibly increases requirements for **ALFALCALCIDOL**, **CALCITRIOL**, **COLECALCIFEROL**, **DIHYDROTACHYSTEROL**, **ERGOCALCIFEROL**, **PARICALCITOL** or **VITAMIN D**

**Procarbazine**

- ▶ Alcohol: disulfiram-like reaction when procarbazine given with **ALCOHOL**
- ▶ Antiepileptics: manufacturer of procarbazine advises possible increased risk of hypersensitivity reactions when given with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cardiac Glycosides: procarbazine possibly reduces absorption of **DIGOXIN tablets**

**Prochlorperazine** see Antipsychotics

**Procyclidine** see Antimuscarinics

**Progesterone** see Progestogens

**Progestogens**

- Antibacterials: plasma concentration of dienogest increased by **ERYTHROMYCIN**; metabolism of progestogens accelerated by
  - **RIFAMYCINS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)
- Anticoagulants: progestogens may enhance or reduce anticoagulant effect of **COUMARINS**; progestogens antagonise anticoagulant effect of ● **PHENINDIONE**
- Antidepressants: contraceptive effect of progestogens reduced by ● **ST JOHN'S WORT** (avoid concomitant use)
- ▶ Antidiabetics: progestogens antagonise hypoglycaemic effect of **ANTI-DIABETICS**
- Antiepileptics: metabolism of progestogens accelerated by
  - **CARBAMAZEPINE**, ● **ESLICARBAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE**, ● **PERAMPANEL**, ● **PHENOBARBITAL**, ● **PHENYTOIN**, ● **PRIMIDONE**, ● **RUFINAMIDE** and ● **TOPIRAMATE** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC); desogestrel possibly increases plasma concentration of **LAMOTRIGINE**
- ▶ Antifungals: plasma concentration of drospirenone increased by **KETOCONAZOLE**; progestogens possibly increase plasma concentration of **VORICONAZOLE**; anecdotal reports of contraceptive failure and menstrual irregularities when progestogens given with **GRISEOFULVIN**; occasional reports of breakthrough bleeding when progestogens (used for contraception) given with **TERBINAFINE**
- Antivirals: plasma concentration of norethisterone increased by **ATAZANAVIR**; plasma concentration of drospirenone increased by **BOCEPREVIR** (increased risk of toxicity); contraceptive effect of progestogens possibly reduced by
  - **EFAVIRENZ**; plasma concentration of norgestimate increased by **ELVITEGRAVIR**; metabolism of progestogens accelerated by ● **NEVIRAPINE** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)
- ▶ Anxiolytics and Hypnotics: progestogens possibly increase plasma concentration of **CHLORDIAZEPOXIDE**, **DIAZEPAM** and **NITRAZEPAM**; progestogens possibly reduce plasma concentration of **LORAZEPAM**, **OXAZEPAM** and **TEMAZEPAM**
- Aprentant: possible contraceptive failure of hormonal contraceptives containing progestogens when given with
  - **APREPITANT** (alternative contraception recommended)
- Bosentan: possible contraceptive failure of hormonal contraceptives containing progestogens when given with
  - **BOSENTAN** (alternative contraception recommended)

**Progestogens** (continued)

- ▶ Ciclosporin: progestogens possibly increase plasma concentration of **CICLOSPORIN**
- ▶ Cobicistat: plasma concentration of norgestimate increased by **COBICISTAT**
- Cytotoxics: possible reduction in contraceptive effect of progestogens advised by manufacturer of ● **CRIZOTINIB** and ● **VEMURAFENIB**; possible reduced contraceptive effect of hormonal contraceptives containing progestogens advised by manufacturer of ● **DABRAFENIB** (alternative contraception recommended); possible reduction in contraceptive effect of progestogens advised by manufacturer of ● **OLAPARIB** (alternative contraception recommended)
- ▶ Diuretics: risk of hyperkalaemia when drospirenone given with **ALDOSTERONE ANTAGONISTS** or **POTASSIUM-SPARING DIURETICS** (monitor serum potassium during first cycle)
- Dopaminergics: progestogens increase plasma concentration of
  - **SELEGILINE**—manufacturer of selegiline advises avoid concomitant use
- Fosaprepitant: possible contraceptive failure of hormonal contraceptives containing progestogens when given with
  - **FOSAPREPITANT** (alternative contraception recommended)
- ▶ Lipid-regulating Drugs: plasma concentration of norethisterone increased by **ATORVASTATIN**; plasma concentration of active metabolite of norgestimate increased by **ROSUVASTATIN**; plasma concentration of norgestrel increased by **ROSUVASTATIN**
- Lumacaftor: possible contraceptive failure of hormonal contraceptives containing progestogens when given with
  - **LUMACAFTOR** (alternative contraception recommended)
- ▶ Muscle Relaxants: progestogens possibly increase plasma concentration of **TIZANIDINE** (increased risk of toxicity)
- ▶ Sugammadex: plasma concentration of progestogens possibly reduced by **SUGAMMADEX**—manufacturer of sugammadex advises additional contraceptive precautions
- ▶ Teriflunomide: plasma concentration of levonorgestrel increased by **TERIFLUNOMIDE**
- Ulipristal: contraceptive effect of progestogens possibly reduced by ● **ULIPRISTAL**

**Proguanil**

- ▶ Antacids: absorption of proguanil reduced by **ORAL MAGNESIUM SALTS** (as magnesium trisilicate)
- ▶ Anticoagulants: isolated reports that proguanil may enhance anticoagulant effect of **WARFARIN**
- Antimalarials: avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; increased antifolate effect when proguanil given with **PYRIMETHAMINE**
- ▶ Antivirals: plasma concentration of proguanil possibly affected by **EFAVIRENZ**
- ▶ Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- ▶ Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Promazine** see Antipsychotics

**Promethazine** see Antihistamines

**Propafenone**

- ▶ Aminophylline: propafenone increases plasma concentration of **AMINOPHYLLINE**
- ▶ Anaesthetics, Local: increased myocardial depression when anti-arrhythmics given with **BUPIVACAINE**, **LEVOBUPIVACAINE**, **PRILOCAINE** or **ROPIVACAINE**
- Anti-arrhythmics: increased myocardial depression when anti-arrhythmics given with other ● **ANTI-ARRHYTHMICS**
- Antibacterials: metabolism of propafenone accelerated by
  - **RIFAMPICIN** (reduced effect)
- Anticoagulants: propafenone enhances anticoagulant effect of
  - **COUMARINS**
- Antidepressants: metabolism of propafenone possibly inhibited by **FLOUOXETINE** and **PAROXETINE**; increased risk of arrhythmias when propafenone given with ● **TRICYCLICS**
- ▶ Antiepileptics: metabolism of propafenone possibly accelerated by **PHENOBARBITAL** and **PRIMIDONE**

**Propafenone** (continued)

- ▶ Antihistamines: avoidance of propafenone advised by manufacturer of **MIZOLASTINE** (possible risk of ventricular arrhythmias)
- Antipsychotics: increased risk of ventricular arrhythmias when anti-arrhythmics that prolong the QT interval given with ● **ANTI-PSYCHOTICS** that prolong the QT interval
- Antivirals: plasma concentration of propafenone possibly increased by ● **FOSAMPRENAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); plasma concentration of propafenone increased by ● **RITONAVIR** (increased risk of ventricular arrhythmias—avoid concomitant use); increased risk of ventricular arrhythmias when propafenone given with ● **SAQUINAVIR**—avoid concomitant use; caution with propafenone advised by manufacturer of ● **TELAPREVRIL** (risk of ventricular arrhythmias)
- Beta-blockers: increased myocardial depression when anti-arrhythmics given with ● **BETA-BLOCKERS**; propafenone increases plasma concentration of **METOPROLOL** and **PROPRANOLOL**
- Cardiac Glycosides: propafenone increases plasma concentration of ● **DIGOXIN** (halve dose of digoxin)
- ▶ Ciclosporin: propafenone possibly increases plasma concentration of **CYCLOSPORIN**
- ▶ Parasympathomimetics: propafenone possibly antagonises effects of **NEOSTIGMINE** and **PYRIDOSTIGMINE**
- ▶ Theophylline: propafenone increases plasma concentration of **THEOPHYLLINE**
- Ulcer-healing Drugs: plasma concentration of propafenone increased by ● **CIMETIDINE**

**Propantheline** see Antimuscarinics**Propiverine** see Antimuscarinics**Propofol** see Anaesthetics, General**Propranolol** see Beta-blockers**Prostaglandins**

- ▶ ACE Inhibitors: enhanced hypotensive effect when alprostadil given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when alprostadil given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alpha-blockers: enhanced hypotensive effect when alprostadil given with **ALPHA-BLOCKERS**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when alprostadil given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Beta-blockers: enhanced hypotensive effect when alprostadil given with **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when alprostadil given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when alprostadil given with **CLONIDINE**
- ▶ Diazoxide: enhanced hypotensive effect when alprostadil given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when alprostadil given with **DIURETICS**
- ▶ Methyldopa: enhanced hypotensive effect when alprostadil given with **METHYLDOPA**
- ▶ Moxonidine: enhanced hypotensive effect when alprostadil given with **MOXONIDINE**
- ▶ Nitrates: enhanced hypotensive effect when alprostadil given with **NITRATES**
- ▶ Oxytocin: prostaglandins potentiate uterotonic effect of **OXYTOCIN**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when alprostadil given with **HYDRALAZINE**, **MINOXIDIL** or **SODIUM NITROPRUSSIDE**

**Protein Kinase Inhibitors** see individual drugs**Proton Pump Inhibitors**

- ▶ Antacids: absorption of lansoprazole possibly reduced by **ANTACIDS**
- ▶ Antibacterials: plasma concentration of both drugs increased when omeprazole given with **CLARITHROMYCIN**
- Anticoagulants: esomeprazole and omeprazole possibly enhance anticoagulant effect of ● **COUMARINS**; pantoprazole might enhance the anticoagulant effect of **COUMARINS**
- ▶ Antidepressants: omeprazole increases plasma concentration of **ESCITALOPRAM**; plasma concentration of lansoprazole

**Proton Pump Inhibitors**

## Antidepressants (continued)

- possibly increased by **FLUVOXAMINE**; plasma concentration of omeprazole possibly reduced by **ST JOHN'S WORT**
- Antiepileptics: esomeprazole enhances effects of ● **FOSPHENYTOIN** and ● **PHENYTOIN**; omeprazole possibly enhances effects of **FOSPHENYTOIN** and **PHENYTOIN**
- Antifungals: proton pump inhibitors reduce absorption of **ITRACONAZOLE** and **KETOCONAZOLE**; esomeprazole reduces plasma concentration of ● **POSACONAZOLE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; lansoprazole, omeprazole, pantoprazole and rabeprazole possibly reduce plasma concentration of ● **POSACONAZOLE**—manufacturer of posaconazole *suspension* advises avoid concomitant use; plasma concentration of esomeprazole possibly increased by **VORICONAZOLE**; plasma concentration of omeprazole increased by **VORICONAZOLE** (consider reducing dose of omeprazole)
- ▶ Antipsychotics: omeprazole possibly reduces plasma concentration of **CLOZAPINE**
- Antivirals: proton pump inhibitors reduce plasma concentration of ● **ATAZANAVIR**—avoid or adjust dose of both drugs (consult product literature); do not take proton pump inhibitors before **LEDIPASVIR** advised by manufacturer of ledipasvir; omeprazole reduces plasma concentration of **LEDIPASVIR**; omeprazole increases plasma concentration of **RALTEGRAVIR**; avoidance of esomeprazole, lansoprazole, pantoprazole and rabeprazole advised by manufacturer of **RILPIVIRINE** (plasma concentration of rilpivirine possibly reduced); omeprazole reduces plasma concentration of ● **RILPIVIRINE**—avoid concomitant use; esomeprazole, lansoprazole, pantoprazole and rabeprazole possibly increase plasma concentration of ● **SAQUINAVIR**—manufacturer of saquinavir advises avoid concomitant use; omeprazole increases plasma concentration of ● **SAQUINAVIR**—manufacturer of saquinavir advises avoid concomitant use; plasma concentration of esomeprazole and omeprazole reduced by ● **TIPRANAVIR**
- ▶ Anxiolytics and Hypnotics: esomeprazole and omeprazole possibly inhibit metabolism of **DIAZEPAM** (increased plasma concentration)
- ▶ Cardiac Glycosides: proton pump inhibitors possibly slightly increase plasma concentration of **DIGOXIN**
- ▶ Ciclosporin: omeprazole possibly affects plasma concentration of **CYCLOSPORIN**
- Cilostazol: omeprazole increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, p. 221)
- Clopidogrel: esomeprazole and omeprazole reduce antiplatelet effect of ● **CLOPIDOGREL**; lansoprazole, pantoprazole and rabeprazole possibly reduce antiplatelet effect of **CLOPIDOGREL**
- Cytotoxics: proton pump inhibitors possibly reduce excretion of **METHOTREXATE** (increased risk of toxicity); lansoprazole reduces plasma concentration of **BOSUTINIB**; avoidance of proton pump inhibitors advised by manufacturer of **DABRAFENIB** (plasma concentration of dabrafenib possibly reduced); avoidance of proton pump inhibitors advised by manufacturer of ● **DASATINIB**—consider using an antacid as an alternative; omeprazole reduces plasma concentration of ● **DASATINIB**—consider using an antacid as an alternative; avoidance of esomeprazole, lansoprazole, pantoprazole and rabeprazole advised by manufacturer of ● **ERLOTINIB**; omeprazole reduces plasma concentration of ● **ERLOTINIB**—manufacturer of erlotinib advises avoid concomitant use; proton pump inhibitors possibly reduce absorption of **LAPATINIB**; proton pump inhibitors possibly reduce absorption of **PAZOPANIB**—manufacturer of pazopanib advises give at the same time as proton pump inhibitors
- ▶ Hormone Antagonists: plasma concentration of omeprazole reduced by **ENZALUTAMIDE**
- ▶ Tacrolimus: omeprazole possibly increases plasma concentration of **TACROLIMUS**
- ▶ Ulcer-healing Drugs: absorption of lansoprazole possibly reduced by **SUCRALFATE**

**Pseudoephedrine** see Sympathomimetics

**Pyrazinamide**

- ▶ Sulfipyrazone: pyrazinamide antagonises effects of **SULFINPYRAZONE**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Pyridostigmine** see Parasympathomimetics**Pyridoxine** see Vitamins**Pyrimethamine**

- Antibacterials: increased antifolate effect when pyrimethamine given with ● **SULFONAMIDES** or ● **TRIMETHOPRIM**
- Antiepileptics: pyrimethamine antagonises anticonvulsant effect of ● **FOSPHENYTOIN** and ● **PHENYTOIN**, also increased antifolate effect
- Antimalarials: avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; increased antifolate effect when pyrimethamine given with **PROGUANIL**
- ▶ Antivirals: increased antifolate effect when pyrimethamine given with **ZIDOVUDINE**
- Cytotoxics: pyrimethamine increases antifolate effect of ● **METHOTREXATE** and ● **PEMETREXED**
- ▶ Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- ▶ Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Quetiapine** see Antipsychotics**Quinagolide**

- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methylidopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**

**Quinapril** see ACE Inhibitors**Quinine**

- Anti-arrhythmics: increased risk of ventricular arrhythmias when quinine given with ● **AMIODARONE**—avoid concomitant use; quinine increases plasma concentration of ● **FLECAINIDE**
- Antibacterials: increased risk of ventricular arrhythmias when quinine given with ● **MOXIFLOXACIN**—avoid concomitant use; plasma concentration of quinine reduced by ● **RIFAMPICIN**
- ▶ Anticoagulants: plasma concentration of both drugs increased when quinine given with **WARFARIN**
- Antidepressants: possible increased risk of ventricular arrhythmias when quinine given with ● **CITALOPRAM** or ● **ESCITALOPRAM**—avoid concomitant use
- Antimalarials: increased risk of ventricular arrhythmias when quinine given with ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of antimalarials advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; increased risk of convulsions when quinine given with ● **MEFLOQUINE** (but should not prevent the use of *intravenous* quinine in severe cases)
- Antipsychotics: increased risk of ventricular arrhythmias when quinine given with ● **DROPERIDOL** or ● **PIMOZIDE**—avoid concomitant use; possible increased risk of ventricular arrhythmias when quinine given with ● **HALOPERIDOL**—avoid concomitant use; possible increased risk of ventricular arrhythmias when quinine given with ● **RISPERIDONE**
- Antivirals: plasma concentration of quinine possibly increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR**, ● **INDINAVIR** and ● **TIPRANAVIR** (increased risk of toxicity); plasma concentration of quinine increased by ● **RITONAVIR** (increased risk of toxicity); increased risk of ventricular arrhythmias when quinine given with ● **SAQUINAVIR**—avoid concomitant use
- Cardiac Glycosides: quinine increases plasma concentration of ● **DIGOXIN**
- ▶ Dopaminergics: quinine possibly increases plasma concentration of **AMANTADINE**
- ▶ Histamine: avoidance of antimalarials advised by manufacturer of **HISTAMINE**
- ▶ Muscle Relaxants: quinine possibly enhances effects of **SUXAMETHONIUM**

**Quinine** (continued)

- ▶ Penicillamine: increased risk of haematological toxicity when antimalarials given with **PENICILLAMINE**—manufacturer of penicillamine advises avoid concomitant use
- ▶ Ulcer-healing Drugs: metabolism of quinine inhibited by **CIMETIDINE** (increased plasma concentration)
- ▶ Vaccines: antimalarials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Quinolones**

- Aminophylline: possible increased risk of convulsions when quinolones given with ● **AMINOPHYLLINE**; ciprofloxacin and norfloxacin increase plasma concentration of ● **AMINOPHYLLINE**
- Analgesics: possible increased risk of convulsions when quinolones given with ● **NSAIDS**
- ▶ Antacids: absorption of moxifloxacin reduced by **ANTACIDS** (give at least 6 hours apart); absorption of ciprofloxacin and levofloxacin reduced by **ANTACIDS** (give at least 2 hours before or 4 hours after ciprofloxacin and levofloxacin); absorption of norfloxacin reduced by **ANTACIDS**; absorption of ofloxacin reduced by **ANTACIDS** (give at least 2 hours apart)
- Anti-arrhythmics: increased risk of ventricular arrhythmias when levofloxacin or moxifloxacin given with ● **AMIODARONE**—avoid concomitant use; increased risk of ventricular arrhythmias when moxifloxacin given with ● **DISOPYRAMIDE**—avoid concomitant use
- Antibacterials: increased risk of ventricular arrhythmias when moxifloxacin given with *parenteral* ● **ERYTHROMYCIN**—avoid concomitant use; avoidance of moxifloxacin advised by manufacturer of **BEDAQUILINE**; ciprofloxacin possibly increases plasma concentration of **BEDAQUILINE**—avoid concomitant use if ciprofloxacin given for more than 14 days; increased risk of ventricular arrhythmias when moxifloxacin given with ● **DELAMANID**; effects of nalidixic acid possibly antagonised by **NITROFURANTOIN**; possible increased risk of ventricular arrhythmias when moxifloxacin given with ● **TELITHROMYCIN**
- Anticoagulants: nalidixic acid, norfloxacin and ofloxacin enhance anticoagulant effect of ● **COUMARINS**; ciprofloxacin and levofloxacin possibly enhance anticoagulant effect of **COUMARINS**; levofloxacin possibly enhances anticoagulant effect of **PHENINDIONE**
- Antidepressants: avoidance of moxifloxacin advised by manufacturer of ● **CITALOPRAM**, ● **ESCITALOPRAM** and ● **VENLAFAXINE** (risk of ventricular arrhythmias); ciprofloxacin inhibits metabolism of ● **DULOXETINE**—avoid concomitant use; avoidance of ciprofloxacin advised by manufacturer of ● **AGOMELATINE**; increased risk of ventricular arrhythmias when moxifloxacin given with ● **TRICYCLICS**—avoid concomitant use
- ▶ Antidiabetics: norfloxacin possibly enhances effects of **GLIBENCLAMIDE**
- ▶ Antiepileptics: ciprofloxacin increases or decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Antihistamines: increased risk of ventricular arrhythmias when moxifloxacin given with ● **MIZOLASTINE**—avoid concomitant use
- Antimalarials: avoidance of quinolones advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE**; avoidance of moxifloxacin advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when moxifloxacin given with ● **CHLOROQUINE**, ● **HYDROXYCHLOROQUINE**, ● **MEFLOQUINE** or ● **QUININE**—avoid concomitant use
- Antipsychotics: increased risk of ventricular arrhythmias when moxifloxacin given with ● **BENPERIDOL**—manufacturer of benperidol advises avoid concomitant use; increased risk of ventricular arrhythmias when moxifloxacin given with ● **DROPERIDOL**, ● **HALOPERIDOL**, ● **PHENOTHIAZINES**, ● **PIMOZIDE** or ● **ZUCLOPENTHIXOL**—avoid concomitant use; ciprofloxacin increases plasma concentration of **CLOZAPINE**; ciprofloxacin possibly increases plasma concentration of **OLANZAPINE**
- Antivirals: manufacturer of moxifloxacin advises give **DIDANOSINE tablets** at least 6 hours before or after moxifloxacin; manufacturer of norfloxacin advises give **DIDANOSINE** at least 2 hours before or after norfloxacin; manufacturer of levofloxacin advises give **DIDANOSINE tablets** at least 2 hours before or after levofloxacin; absorption of ciprofloxacin reduced by **DIDANOSINE tablets** (give at least

**Quinolones**

- Antivirals (continued)
  - 2 hours before or 4 hours after ciprofloxacin); increased risk of ventricular arrhythmias when moxifloxacin given with
    - **SAQUINAVIR**—avoid concomitant use
  - ▶ Anxiolytics and Hypnotics: avoidance of ciprofloxacin advised by manufacturer of **ZOLPIDEM**
  - Atomoxetine: increased risk of ventricular arrhythmias when moxifloxacin given with ● **ATOMOXETINE**
  - Beta-blockers: increased risk of ventricular arrhythmias when moxifloxacin given with ● **SOTALOL**—avoid concomitant use
  - ▶ Calcium Salts: absorption of ciprofloxacin reduced by **CALCIUM SALTS** (give at least 2 hours before or 4 hours after ciprofloxacin)
  - Closporin: increased risk of nephrotoxicity when quinolones given with ● **CICLOSPORIN**
  - Clopidogrel: ciprofloxacin possibly reduces antiplatelet effect of ● **CLOPIDOGREL**
  - Cytotoxics: nalidixic acid increases risk of **MELPHALAN** toxicity; ciprofloxacin possibly reduces excretion of **METHOTREXATE** (increased risk of toxicity); possible increased risk of ventricular arrhythmias when moxifloxacin given with
    - **BOSUTINIB** and ● **CERITINIB**; ciprofloxacin possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; ciprofloxacin increases plasma concentration of **ERLOTINIB**; ciprofloxacin possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, p. 867); possible increased risk of ventricular arrhythmias when moxifloxacin given with ● **VANDETANIB**—avoid concomitant use; increased risk of ventricular arrhythmias when levofloxacin or moxifloxacin given with
      - **ARSENIC TRIOXIDE**; ciprofloxacin possibly increases plasma concentration of ● **OLAPARIB** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
  - ▶ Dairy Products: absorption of ciprofloxacin reduced by **DAIRY PRODUCTS** (give at least 2 hours apart); absorption of norfloxacin reduced by **DAIRY PRODUCTS**
  - ▶ Dopaminergics: ciprofloxacin increases plasma concentration of **RASAGILINE**; ciprofloxacin inhibits metabolism of **ROPINIROLE** (increased plasma concentration)
  - ▶ 5HT<sub>2</sub>-receptor Agonists: quinolones possibly inhibit metabolism of **ZOLMITRIPTAN** (reduce dose of zolmitriptan)
  - ▶ Iron Salts: absorption of moxifloxacin reduced by *oral* **IRON SALTS** (give at least 6 hours apart); absorption of ciprofloxacin reduced by *oral* **IRON SALTS** (give at least 2 hours before or 4 hours after ciprofloxacin); absorption of levofloxacin, norfloxacin and ofloxacin reduced by *oral* **IRON SALTS** (give at least 2 hours apart)
  - ▶ Lanthanum: absorption of quinolones possibly reduced by **LANTHANUM** (give at least 2 hours before or 4 hours after lanthanum)
  - Muscle Relaxants: norfloxacin possibly increases plasma concentration of **TIZANIDINE** (increased risk of toxicity); ciprofloxacin increases plasma concentration of ● **TIZANIDINE** (increased risk of toxicity)—avoid concomitant use
  - ▶ Mycophenolate: norfloxacin possibly reduces bioavailability of **MYCOPHENOLATE**
  - Panobinostat: possible increased risk of ventricular arrhythmias when moxifloxacin given with ● **PANOBINOSTAT**—avoid concomitant use
  - Pentamidine Isetionate: increased risk of ventricular arrhythmias when moxifloxacin given with ● **PENTAMIDINE ISETIONATE**—avoid concomitant use
  - Pirfenidone: ciprofloxacin increases plasma concentration of ● **PIRFENIDONE**—see under Pirfenidone, p. 279
  - ▶ Sevelamer: absorption of ciprofloxacin reduced by **SEVELAMER** (give at least 2 hours before or 4 hours after ciprofloxacin)
  - ▶ Strontium Ranelate: absorption of quinolones reduced by **STRONTIUM RANELATE** (manufacturer of strontium ranelate advises avoid concomitant use)
  - Theophylline: possible increased risk of convulsions when quinolones given with ● **THEOPHYLLINE**; ciprofloxacin and norfloxacin increase plasma concentration of ● **THEOPHYLLINE**
  - ▶ Ulcer-healing Drugs: absorption of levofloxacin, norfloxacin and ofloxacin reduced by **SUCRALFATE** (give at least 2 hours

**Quinolones**

- Ulcer-healing Drugs (continued)
  - apart); absorption of ciprofloxacin reduced by **SUCRALFATE** (give at least 2 hours before or 4 hours after ciprofloxacin); absorption of moxifloxacin reduced by **SUCRALFATE** (give at least 6 hours apart)
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNF C
- ▶ Zinc: absorption of moxifloxacin reduced by **ZINC** (give at least 6 hours apart); absorption of ciprofloxacin, levofloxacin, norfloxacin and ofloxacin reduced by **ZINC** (give at least 2 hours apart)

**Rabeprazole** see Proton Pump Inhibitors

**Rabies Vaccine** see Vaccines

**Raloxifene**

- ▶ Anticoagulants: raloxifene antagonises anticoagulant effect of **COUMARINS**
- ▶ Lipid-regulating Drugs: absorption of raloxifene reduced by **COLESTYRAMINE** (manufacturer of raloxifene advises avoid concomitant administration)

**Raltegravir**

- ▶ Anticids: plasma concentration of raltegravir reduced by **ALUMINIUM HYDROXIDE** and **ORAL MAGNESIUM SALTS**—manufacturer of raltegravir advises avoid concomitant use
- Antibacterials: plasma concentration of raltegravir reduced by
  - **RIFAMPICIN**—consider increasing dose of raltegravir
- Antivirals: increased risk of rash when raltegravir given with **DARUNAVIR**; avoidance of raltegravir advised by manufacturer of ● **FOSAMPNAVIR**
- Orlistat: absorption of raltegravir possibly reduced by
  - **ORLISTAT**
- ▶ Ulcer-healing Drugs: plasma concentration of raltegravir increased by **FAMOTIDINE** and **OMEPRAZOLE**

**Raltitrexed**

- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- Folates: manufacturer of raltitrexed advises avoid concomitant use with ● **FOLATES**

**Ramipril** see ACE Inhibitors

**Ramucirumab**

- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Ranitidine** see Histamine H<sub>2</sub>-antagonists

**Ranolazine**

- Anti-arrhythmic: manufacturer of ranolazine advises avoid concomitant use with ● **DISOPYRAMIDE**
- Antibacterials: plasma concentration of ranolazine possibly increased by ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—manufacturer of ranolazine advises avoid concomitant use; plasma concentration of ranolazine reduced by ● **RIFAMPICIN**—manufacturer of ranolazine advises avoid concomitant use
- ▶ Antidepressants: plasma concentration of ranolazine increased by **PAROXETINE**
- Antifungals: plasma concentration of ranolazine increased by
  - **KETOCONAZOLE**—avoid concomitant use; plasma concentration of ranolazine possibly increased by
    - **ITRACONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—manufacturer of ranolazine advises avoid concomitant use
- Antivirals: plasma concentration of ranolazine possibly increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **FOSAMPNAVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **RITONAVIR**, ● **SAQUINAVIR** and ● **TIPRANAVIR**—manufacturer of ranolazine advises avoid concomitant use
- Beta-blockers: manufacturer of ranolazine advises avoid concomitant use with ● **SOTALOL**
- ▶ Calcium-channel Blockers: plasma concentration of ranolazine increased by **DILTIAZEM** and **VERAPAMIL** (consider reducing dose of ranolazine)
- ▶ Cardiac Glycosides: ranolazine increases plasma concentration of **DIGOXIN**
- ▶ Closporin: plasma concentration of both drugs may increase when ranolazine given with **CICLOSPORIN**

**Ranolazine** (continued)

- Grapefruit Juice: plasma concentration of ranolazine possibly increased by ● **GRAPEFRUIT JUICE**—manufacturer of ranolazine advises avoid concomitant use
- Lipid-regulating Drugs: ranolazine increases plasma concentration of ● **SIMVASTATIN** (see under Simvastatin, p. 194); separating administration from ranolazine by 12 hours advised by manufacturer of **LOMITAPIDE**
- Tacrolimus: ranolazine increases plasma concentration of ● **TACROLIMUS**

**Rasagiline**

**NOTE** Rasagiline is a MAO-B inhibitor

- Analgesics: avoid concomitant use of rasagiline with ● **DEXTROMETHORPHAN**; risk of CNS toxicity when rasagiline given with ● **PETHIDINE** (avoid pethidine for 2 weeks after rasagiline)
- ▶ Antibacterials: plasma concentration of rasagiline increased by ● **CIPROFLOXACIN**
- Antidepressants: after stopping rasagiline do not start ● **FLUOXETINE** for 2 weeks, also rasagiline should not be started until at least 5 weeks after stopping fluoxetine; after stopping rasagiline do not start ● **FLUVOXAMINE** for 2 weeks; risk of hypertensive crisis when rasagiline given with ● **MAOIS**, avoid MAOIs for at least 2 weeks after stopping rasagiline; increased risk of CNS toxicity when rasagiline given with ● **SSRIS** or ● **TRICYCLICS**; risk of CNS excitation and hypertension when rasagiline given with ● **VORTIOXETINE**
- ▶ Dopaminergics: plasma concentration of rasagiline possibly reduced by ● **ENTACAPONE**
- ▶ Memantine: effects of dopaminergics possibly enhanced by ● **MEMANTINE**
- ▶ Methyl dopa: antiparkinsonian effect of dopaminergics antagonised by ● **METHYLDOPA**
- Sympathomimetics: avoid concomitant use of rasagiline with ● **SYMPATHOMIMETICS**

**Reboxetine**

- Antibacterials: manufacturer of reboxetine advises avoid concomitant use with ● **MACROLIDES**
- Antidepressants: manufacturer of reboxetine advises avoid concomitant use with ● **FLUVOXAMINE**; increased risk of hypertension and CNS excitation when reboxetine given with ● **MAOIS** (MAOIs should not be started until 1 week after stopping reboxetine, avoid reboxetine for 2 weeks after stopping MAOIs)
- ▶ Antiepileptics: plasma concentration of reboxetine possibly reduced by ● **CARBAMAZEPINE**, ● **PHENOBARBITAL** and ● **PRIMIDONE**
- Antifungals: manufacturer of reboxetine advises avoid concomitant use with ● **IMIDAZOLES** and ● **TRIAZOLES**
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with ● **ATOMOXETINE**
- ▶ Diuretics: possible increased risk of hypokalaemia when reboxetine given with ● **LOOP DIURETICS** or ● **THIAZIDES AND RELATED DIURETICS**
- ▶ Ergot Alkaloids: possible risk of hypertension when reboxetine given with ● **ERGOTAMINE**

**Regorafenib**

- ▶ Analgesics: manufacturer of regorafenib advises avoid concomitant use with ● **MEFENAMIC ACID**
- Antibacterials: plasma concentration of regorafenib reduced by ● **RIFAMPICIN**—manufacturer of regorafenib advises avoid concomitant use
- Anticoagulants: increased risk of bleeding when regorafenib given with ● **WARFARIN**
- Antifungals: plasma concentration of regorafenib increased by ● **KETOCONAZOLE**—avoid concomitant use
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Cytotoxics: regorafenib increases plasma concentration of ● **IRINOTECAN**

**Remifentanyl** see Opioid Analgesics

**Repaglinide** see Antidiabetics

**Retigabine**

- ▶ Alcohol: increased risk of blurred vision when retigabine given with ● **ALCOHOL**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: plasma concentration of retigabine possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

**Retinoids**

- Alcohol: etretinate formed from acitretin in presence of ● **ALCOHOL** (increased risk of teratogenicity in women of child-bearing potential)
- Antibacterials: possible increased risk of benign intracranial hypertension when retinoids given with ● **TETRACYCLINES** (avoid concomitant use)
- Anticoagulants: acitretin possibly reduces anticoagulant effect of ● **COUMARINS**
- ▶ Antiepileptics: isotretinoin possibly reduces plasma concentration of ● **CARBAMAZEPINE**
- Antifungals: plasma concentration of alitretinoin increased by ● **KETOCONAZOLE**; possible increased risk of tretinoin toxicity when given with ● **FLUCONAZOLE**, ● **KETOCONAZOLE** and ● **VORICONAZOLE**
- Cytotoxics: acitretin increases plasma concentration of ● **METHOTREXATE** (also increased risk of hepatotoxicity)—avoid concomitant use
- ▶ Lipid-regulating Drugs: alitretinoin reduces plasma concentration of ● **SIMVASTATIN**
- Vitamins: risk of hypervitaminosis A when retinoids given with ● **VITAMIN A**—avoid concomitant use

**Ribavirin**

- Antivirals: effects of ribavirin possibly reduced by ● **ABACAVIR**; increased risk of side-effects when ribavirin given with ● **DIDANOSIN**—avoid concomitant use; increased risk of toxicity when ribavirin given with ● **STAVUDINE**; increased risk of anaemia when ribavirin given with ● **ZIDOVUDINE**—avoid concomitant use
- Azathioprine: ribavirin possibly enhances myelosuppressive effects of ● **AZATHIOPRINE**

**Rifabutin** see Rifamycins

**Rifampicin** see Rifamycins

**Rifamycins**

**NOTE** Interactions do not apply to rifaximin

- ▶ ACE Inhibitors: rifampicin reduces plasma concentration of active metabolite of ● **IMIDAPRIL** (reduced antihypertensive effect)
- ▶ Aliskiren: rifampicin reduces plasma concentration of ● **ALISKIREN**
- ▶ Ambrisentan: rifampicin possibly increases plasma concentration of ● **AMBRISENTAN**
- ▶ Aminophylline: rifampicin accelerates metabolism of ● **AMINOPHYLLINE** (reduced plasma concentration)
- ▶ Analgesics: rifampicin reduces plasma concentration of ● **CELECOXIB**, ● **DICLOFENAC** and ● **ETORICOXIB**; rifampicin accelerates metabolism of ● **ALFENTANIL**, ● **CODEINE**, ● **FENTANYL**, ● **METHADONE** and ● **MORPHINE** (reduced effect); rifampicin possibly accelerates metabolism of ● **OXYCODONE**
- ▶ Angiotensin-II Receptor Antagonists: rifampicin reduces plasma concentration of ● **LOSARTAN** and its active metabolite
- ▶ Antacids: absorption of rifampicin reduced by ● **ANTACIDS**
- Anthelmintics: rifampicin reduces plasma concentration of ● **PRAZIQUANTEL**—avoid concomitant use
- Anti-arrhythmics: rifamycins accelerate metabolism of ● **DISOPYRAMIDE** (reduced plasma concentration); rifampicin reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use; rifampicin accelerates metabolism of ● **PROPAFENONE** (reduced effect)

## Rifamycins (continued)

- Antibacterials: increased risk of side-effects including neutropenia when rifabutin given with ● **AZITHROMYCIN**; rifamycins reduce plasma concentration of **CLARITHROMYCIN** and **DAPSONE**; plasma concentration of rifabutin increased by ● **CLARITHROMYCIN** (increased risk of toxicity—reduce rifabutin dose); plasma concentration of rifabutin possibly increased by ● **ERYTHROMYCIN** (increased risk of toxicity—reduce rifabutin dose); rifampicin possibly reduces plasma concentration of **TINIDAZOLE** and **TRIMETHOPRIM**; rifampicin reduces plasma concentration of **DOXYCYCLINE**—consider increasing dose of doxycycline; rifampicin reduces plasma concentration of ● **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; rifabutin possibly reduces plasma concentration of **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; rifampicin accelerates metabolism of **CHLORAMPHENICOL** (reduced plasma concentration); rifampicin reduces plasma concentration of ● **DELAMANID**; increased risk of hepatotoxicity when rifampicin given with ● **ISONIAZID**; rifampicin reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after rifampicin)
- Anticoagulants: rifampicin possibly reduces plasma concentration of ● **APIXABAN**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; rifamycins accelerate metabolism of ● **COUMARINS** (reduced anticoagulant effect); rifampicin reduces plasma concentration of ● **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; rifampicin reduces plasma concentration of ● **EDOXABAN**; rifampicin reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: rifampicin reduces plasma concentration of **LINEZOLID** (possible therapeutic failure of linezolid); rifampicin reduces plasma concentration of ● **VORTIOXETINE**—consider increasing dose of vortioxetine
- Antidiabetics: rifamycins accelerate metabolism of ● **TOLBUTAMIDE** (reduced effect); rifampicin reduces plasma concentration of ● **CANAGLIFLOZIN** and **NATEGLINIDE**; rifampicin possibly reduces effects of **LINAGLIPTIN**; rifampicin possibly antagonises hypoglycaemic effect of **REPAGLINIDE**; rifamycins possibly accelerate metabolism of ● **SULFONYLUREAS** (reduced effect)
- Antiepileptics: rifampicin reduces plasma concentration of ● **BRIVARACETAM** and ● **LAMOTRIGINE**; rifabutin reduces plasma concentration of ● **CARBAMAZEPINE**; rifamycins accelerate metabolism of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (reduced plasma concentration); plasma concentration of rifampicin possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**
- Antifungals: rifampicin accelerates metabolism of ● **KETOCONAZOLE** (reduced plasma concentration), also plasma concentration of rifampicin may be reduced by ketoconazole; plasma concentration of rifabutin increased by ● **FLUCONAZOLE** (increased risk of uveitis—reduce rifabutin dose); rifampicin accelerates metabolism of ● **FLUCONAZOLE** (reduced plasma concentration); rifabutin possibly reduces plasma concentration of ● **ISAVUCONAZOLE**—avoid concomitant use; rifampicin reduces plasma concentration of ● **ISAVUCONAZOLE** and ● **VORICONAZOLE**—avoid concomitant use; rifabutin and rifampicin reduce plasma concentration of ● **ITRACONAZOLE**—manufacturer of itraconazole advises avoid concomitant use; plasma concentration of rifabutin increased by ● **POSACONAZOLE** (also plasma concentration of posaconazole reduced); rifampicin reduces plasma concentration of ● **POSACONAZOLE** and ● **TERBINAFINE**; plasma concentration of rifabutin increased by ● **VORICONAZOLE**, also rifabutin reduces plasma concentration of voriconazole (increase dose of voriconazole and also monitor for rifabutin toxicity); rifampicin initially increases and then reduces plasma concentration of **CASPOFUNGIN** (consider increasing dose of caspofungin); plasma concentration of rifabutin possibly increased by ● **TRIAZOLES** (increased risk of uveitis—reduce rifabutin dose)
- ▶ Antihistamines: rifampicin possibly reduces effects of **FEXOFENADINE**

## Rifamycins (continued)

- Antimalarials: avoidance of rifampicin advised by manufacturer of **ARTENIMOL WITH PIPERAQUINE**; rifampicin reduces plasma concentration of ● **MEFLOQUINE**—avoid concomitant use; rifampicin reduces plasma concentration of ● **QUININE**
- Antimuscarinics: rifampicin reduces plasma concentration of active metabolite of ● **FESOTERODINE**—avoid concomitant use
- Antipsychotics: rifampicin accelerates metabolism of ● **HALOPERIDOL** (reduced plasma concentration); rifabutin and rifampicin possibly reduce plasma concentration of ● **ARIPIPRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); rifampicin possibly reduces plasma concentration of **CLOZAPINE**; rifampicin reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- Antivirals: rifampicin possibly reduces plasma concentration of **ABACAVIR**; rifampicin reduces plasma concentration of ● **ATAZANAVIR**, ● **DACLATASVIR**, ● **LOPINAVIR**, ● **NEVIRAPINE** and ● **RILPIVIRINE**—avoid concomitant use; plasma concentration of rifabutin increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **FOSAMPRENAVIR** and ● **TIPRANAVIR** (reduce dose of rifabutin); avoidance of rifampicin advised by manufacturer of ● **BOCEPREVIR** (plasma concentration of boceprevir possibly reduced); rifabutin possibly reduces plasma concentration of ● **DACLATASVIR** and **SIMEPREVIR**—manufacturer of daclatasvir and simeprevir advises avoid concomitant use; rifampicin significantly reduces plasma concentration of ● **DARUNAVIR**, ● **FOSAMPRENAVIR** and ● **TELAPREVIR**—avoid concomitant use; rifampicin possibly reduces plasma concentration of ● **DASABUVIR**, ● **OMBITASVIR**, ● **PARITAPREVIR** and ● **TIPRANAVIR**—avoid concomitant use; rifampicin reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); rifampicin reduces plasma concentration of **EFAVIRENZ**—increase dose of efavirenz; plasma concentration of rifabutin reduced by **EFAVIRENZ**—increase dose of rifabutin; avoidance of rifampicin advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and **ZIDOVUDINE**; rifabutin reduces plasma concentration of ● **ELVITEGRAVIR** also plasma concentration of active metabolite of rifabutin increased—reduce dose of rifabutin; plasma concentration of both drugs reduced when rifabutin given with ● **ETRAVIRINE**; plasma concentration of rifabutin increased by ● **INDINAVIR**, also plasma concentration of indinavir decreased (reduce dose of rifabutin and increase dose of indinavir); rifampicin accelerates metabolism of ● **INDINAVIR** (reduced plasma concentration—avoid concomitant use); avoidance of rifabutin advised by manufacturer of **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**; rifampicin reduces plasma concentration of ● **MARAVIROC** and ● **RALTEGRAVIR**—consider increasing dose of maraviroc and raltegravir; plasma concentration of rifabutin possibly increased by **NEVIRAPINE**; rifabutin decreases plasma concentration of ● **RILPIVIRINE** (increase dose of rilpivirine—consult rilpivirine product literature); plasma concentration of rifabutin increased by ● **RITONAVIR** (increased risk of toxicity—reduce rifabutin dose); rifampicin reduces plasma concentration of **RITONAVIR**; rifampicin significantly reduces plasma concentration of ● **SAQUINAVIR**, also risk of hepatotoxicity—avoid concomitant use; plasma concentration of rifabutin increased by ● **SAQUINAVIR** (also plasma concentration of saquinavir reduced)—reduce rifabutin dose; rifampicin reduces plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use
- ▶ Anxiolytics and Hypnotics: rifampicin accelerates metabolism of **DIAZEPAM** and **ZALEPLON** (reduced plasma concentration); rifampicin possibly accelerates metabolism of **BENZODIAZEPINES** (reduced plasma concentration); rifampicin possibly accelerates metabolism of **BUSPIRONE**; rifampicin accelerates metabolism of **ZOLPIDEM** (reduced plasma concentration and reduced effect); rifampicin significantly reduces plasma concentration of **ZOPICLONE**
- Apremilast: rifampicin reduces plasma concentration of ● **APREMILAST**—avoid concomitant use
- ▶ Aprepitant: rifampicin reduces plasma concentration of **APREPITANT**

**Rifamycins** (continued)

- **Atovaquone:** avoidance of concomitant rifabutin advised by manufacturer of **ATOVAQUONE** (plasma concentration of both drugs reduced); rifampicin reduces plasma concentration of
  - **ATOVAQUONE** (and concentration of rifampicin increased)—avoid concomitant use
- ▶ **Avanafil:** rifampicin possibly reduces plasma concentration of **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- ▶ **Beta-blockers:** rifampicin accelerates metabolism of **BISOPROLOL** and **PROPRANOLOL** (plasma concentration significantly reduced); rifampicin reduces plasma concentration of **CARVEDILOL**, **CELIPROLOL** and **METOPROLOL**; rifampicin possibly reduces plasma concentration of *oral TIMOLOL*
- **Bosentan:** rifampicin reduces plasma concentration of
  - **BOSENTAN**—avoid concomitant use
- **Calcium-channel Blockers:** rifampicin possibly reduces plasma concentration of **FELODIPINE**; rifampicin possibly accelerates metabolism of ● **ISRADIPINE** and ● **NICARDIPINE** (possible significantly reduced plasma concentration); rifampicin accelerates metabolism of ● **DILTIAZEM**, ● **NIFEDIPINE**, ● **NIMODIPINE** and ● **VERAPAMIL** (plasma concentration significantly reduced)
- **Cannabis Extract:** rifampicin reduces plasma concentration of
  - **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- ▶ **Cardiac Glycosides:** rifampicin possibly reduces plasma concentration of **DIGOXIN**
- **Ciclosporin:** rifampicin accelerates metabolism of ● **CICLOSPORIN** (reduced plasma concentration)
- **Cobicistat:** rifabutin reduces plasma concentration of
  - **COBICISTAT** (adjust dose—consult product literature); rifampicin possibly reduces plasma concentration of
    - **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- **Corticosteroids:** rifamycins accelerate metabolism of
  - **CORTICOSTEROIDS** (reduced effect)
- **Cytotoxics:** rifampicin possibly reduces effects of **BRENTUXIMAB VEDOTIN**; rifampicin reduces plasma concentration of **AFATINIB**, **RUXOLITINIB**, **SORAFENIB** and ● **TRABECTEDIN**; rifabutin possibly decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); rifampicin decreases plasma concentration of **AXITINIB** (increase dose of axitinib—consult axitinib product literature); rifabutin possibly reduces plasma concentration of ● **BOSUTINIB**, **CRIZOTINIB** and **PONATINIB**—manufacturer of bosutinib, crizotinib and ponatinib advises avoid concomitant use; rifampicin reduces plasma concentration of ● **BORTEZOMIB**, ● **BOSUTINIB**, ● **CABAZITAXEL**, ● **CRIZOTINIB**, ● **PONATINIB**, ● **REGORAFENIB** and ● **VANDETANIB**—manufacturer of bortezomib, bosutinib, cabazitaxel, crizotinib, ponatinib, regorafenib and vandetanib advises avoid concomitant use; rifampicin reduces plasma concentration of ● **CABOZANTINIB**, ● **CERITINIB**, ● **GEFITINIB**, ● **IBRUTINIB**, ● **IDELALISIB**, ● **IMATINIB**, ● **NILOTINIB** and ● **NINTEDANIB**—avoid concomitant use; rifabutin possibly reduces plasma concentration of
  - **CERITINIB**—avoid concomitant use; avoidance of rifampicin advised by manufacturer of **DABRAFENIB**, ● **LAPATINIB**, ● **OLAPARIB** and **VMURAFENIB**; rifampicin accelerates metabolism of ● **DASATINIB** (reduced plasma concentration—avoid concomitant use); rifampicin accelerates metabolism of **ERLOTINIB** and **SUNITINIB** (reduced plasma concentration); rifampicin reduces plasma concentration of ● **EVEROLIMUS** (avoid concomitant use or consider increasing the dose of everolimus—consult everolimus product literature); avoidance of rifabutin advised by manufacturer of
    - **CABAZITAXEL**, ● **LAPATINIB**, ● **OLAPARIB** and **VMURAFENIB**; rifampicin possibly reduces plasma concentration of **ERIBULIN** and ● **PAZOPANIB**; rifampicin reduces plasma concentration of active metabolite of ● **TEMSIROLIMUS**—avoid concomitant use; rifampicin possibly reduces plasma concentration of
      - **VINFLUNINE**—manufacturer of vinflunine advises avoid concomitant use; avoidance of rifampicin advised by manufacturer of ● **VISMODEGIB** (plasma concentration of vismodegib possibly reduced)

**Rifamycins** (continued)

- ▶ **Deferasirox:** rifampicin reduces plasma concentration of **DEFERASIROX**
- **Diuretics:** rifampicin reduces plasma concentration of
  - **EPLERENONE**—avoid concomitant use
- ▶ **Fosaprepitant:** rifampicin reduces plasma concentration of **FOSAPREPITANT**
- **Guanfacine:** rifabutin possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine; rifampicin reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- **Hormone Antagonists:** rifampicin reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; rifabutin possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use; rifampicin possibly reduces plasma concentration of **EXEMESTANE**; rifampicin accelerates metabolism of **TAMOXIFEN** (reduced plasma concentration)
- ▶ **5HT<sub>2</sub>-receptor Antagonists:** rifampicin accelerates metabolism of **ONDANSETRON** (reduced effect)
- **Ivacaftor:** rifabutin possibly reduces plasma concentration of
  - **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use; rifampicin reduces plasma concentration of
    - **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ **Leflunomide:** rifampicin possibly increases plasma concentration of active metabolite of **LEFLUNOMIDE**
- ▶ **Lipid-regulating Drugs:** rifampicin possibly reduces plasma concentration of **ATORVASTATIN** and **SIMVASTATIN**; rifampicin accelerates metabolism of **FLUVASTATIN** (reduced effect)
- ▶ **Lumacaftor:** plasma concentration of rifabutin possibly reduced by **LUMACAFTOR**—avoid concomitant use
- **Macitentan:** rifampicin reduces plasma concentration of
  - **MACITENTAN**—avoid concomitant use
- ▶ **Muscle Relaxants:** rifampicin possibly reduces plasma concentration of **TIZANIDINE**
- **Mycophenolate:** rifampicin reduces plasma concentration of active metabolite of ● **MYCOPHENOLATE**
- **Naloxegol:** rifampicin reduces plasma concentration of
  - **NALOXEGOL**—avoid concomitant use
- **Netupitant:** rifampicin reduces plasma concentration of
  - **NETUPITANT**—avoid concomitant use
- **Oestrogens:** rifamycins accelerate metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- **Panobinostat:** avoidance of rifabutin and rifampicin advised by manufacturer of ● **PANOBINOSTAT**
- **Progestogens:** rifamycins accelerate metabolism of
  - **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)
- **Ranolazine:** rifampicin reduces plasma concentration of
  - **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- **Roflumilast:** rifampicin inhibits effects of ● **ROFLUMILAST** (manufacturer of roflumilast advises avoid concomitant use)
- **Sirolimus:** rifabutin and rifampicin reduce plasma concentration of ● **SIROLIMUS**—avoid concomitant use
- **Tacrolimus:** rifabutin possibly reduces plasma concentration of **TACROLIMUS**; rifampicin reduces plasma concentration of
  - **TACROLIMUS**
- **Tadalafil:** rifampicin reduces plasma concentration of
  - **TADALAFIL**—manufacturer of tadalafil advises avoid concomitant use
- ▶ **Teriflunomide:** rifampicin reduces plasma concentration of **TERIFLUNOMIDE**
- ▶ **Theophylline:** rifampicin accelerates metabolism of **THEOPHYLLINE** (reduced plasma concentration)
- ▶ **Thyroid Hormones:** rifampicin accelerates metabolism of **LEVOTHYROXINE** (may increase requirements for levothyroxine in hypothyroidism)
- ▶ **Tibolone:** rifampicin accelerates metabolism of **TIBOLONE** (reduced plasma concentration)

**Rifamycins** (continued)

- Ticagrelor: rifampicin reduces plasma concentration of
  - **TICAGRELOR**
- ▶ Tolvaptan: rifampicin reduces plasma concentration of **TOLVAPTAN**
- ▶ Ulcer-healing Drugs: rifampicin accelerates metabolism of **CIMETIDINE** (reduced plasma concentration)
- Ulipristal: avoidance of rifampicin advised by manufacturer of
  - **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Rifaximin**

- NOTE Rifamycins interactions do not apply to rifaximin
- ▶ Anticoagulants: rifaximin possibly reduces anticoagulant effect of **WARFARIN**
- Cyclosporin: plasma concentration of rifaximin increased by
  - **CYCLOSPORIN**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Rilpivirine**

- ▶ Analgesics: rilpivirine possibly reduces plasma concentration of **METHADONE**
- ▶ Antacids: manufacturer of rilpivirine advises give **ANTACIDS** 2 hours before or 4 hours after rilpivirine
- Antibacterials: manufacturer of rilpivirine advises avoid concomitant use with
  - **CLARITHROMYCIN** and ● **ERYTHROMYCIN** (plasma concentration of rilpivirine possibly increased); plasma concentration of rilpivirine decreased by ● **RIFABUTIN** (increase dose of rilpivirine—consult rilpivirine product literature); plasma concentration of rilpivirine reduced by ● **RIFAMPICIN**—avoid concomitant use
- ▶ Anticoagulants: rilpivirine possibly increases plasma concentration of **DABIGATRAN**
- Antidepressants: manufacturer of rilpivirine advises avoid concomitant use with ● **ST JOHN'S WORT** (plasma concentration of rilpivirine possibly reduced)
- Antiepileptics: manufacturer of rilpivirine advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **OXCARBAZEPINE**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (plasma concentration of rilpivirine possibly reduced)
- ▶ Antivirals: manufacturer of rilpivirine advises give **DIDANOSINE** 2 hours before or 4 hours after rilpivirine; avoidance of rilpivirine advised by manufacturer of **NEVIRAPINE**
- ▶ Calcium Salts: manufacturer of rilpivirine advises give **CALCIUM SALTS** 2 hours before or 4 hours after rilpivirine
- Corticosteroids: manufacturer of rilpivirine advises avoid concomitant use with ● **DEXAMETHASONE** (except when given as a single dose)
- Orlistat: absorption of rilpivirine possibly reduced by
  - **ORLISTAT**
- Ulcer-healing Drugs: manufacturer of rilpivirine advises avoid concomitant use with **ESOMEPRAZOLE**, **LANSOPRAZOLE**, **PANTOPRAZOLE** and **RABEPRAZOLE** (plasma concentration of rilpivirine possibly reduced); plasma concentration of rilpivirine reduced by ● **OMEPRAZOLE**—avoid concomitant use; manufacturer of rilpivirine advises avoid **HISTAMINE H<sub>2</sub> ANTAGONISTS** for 12 hours before or 4 hours after rilpivirine—consult product literature

**Riociguat**

- ▶ Antacids: absorption of riociguat reduced by **ANTACIDS** (give at least 2 hours before or 1 hour after riociguat)
- ▶ Antifungals: manufacturer of riociguat advises avoid concomitant use with **ITRACONAZOLE**, **KETOCONAZOLE** and **VORICONAZOLE**
- ▶ Antivirals: manufacturer of riociguat advises avoid concomitant use with **RITONAVIR**
- Avanafil: possible enhanced hypotensive effect when riociguat given with ● **AVANAFIL**—avoid concomitant use
- ▶ Bosentan: plasma concentration of riociguat reduced by **BOSENTAN**
- Nicorandil: possible enhanced hypotensive effect when riociguat given with ● **NICORANDIL**—avoid concomitant use
- Nitrates: possible enhanced hypotensive effect when riociguat given with ● **NITRATES**—avoid concomitant use

**Riociguat** (continued)

- Sildenafil: enhanced hypotensive effect when riociguat given with ● **SILDENAFIL**—avoid concomitant use
- Tadalafil: possible enhanced hypotensive effect when riociguat given with ● **TADALAFIL**—avoid concomitant use
- Vardenafil: possible enhanced hypotensive effect when riociguat given with ● **VARDENAFIL**—avoid concomitant use

**Risedronate Sodium** see Bisphosphonates**Risperidone** see Antipsychotics**Ritonavir**

- Alpha-blockers: ritonavir possibly increases plasma concentration of ● **ALFUZOSIN**—avoid concomitant use
- Aminophylline: ritonavir accelerates metabolism of
  - **AMINOPHYLLINE** (reduced plasma concentration)
- Analgesics: ritonavir possibly increases plasma concentration of **NSAIDs** and **BUPRENORPHINE**; ritonavir increases plasma concentration of ● **DEXTROROPROXYPHENE** and ● **PIROXICAM** (risk of toxicity)—avoid concomitant use; ritonavir increases plasma concentration of ● **ALFENTANYL** and ● **FENTANYL**; ritonavir reduces plasma concentration of **METHADONE**; ritonavir possibly reduces plasma concentration of **MORPHINE**; ritonavir reduces plasma concentration of ● **PETHIDINE**, but increases plasma concentration of toxic metabolite of pethidine (avoid concomitant use)
- Anthelmintics: ritonavir possibly reduces plasma concentration of active metabolite of ● **ALBENDAZOLE**—consider increasing albendazole dose when given for systemic infections
- Anti-arrhythmics: ritonavir increases plasma concentration of
  - **AMIODARONE** and ● **PROPAFENONE** (increased risk of ventricular arrhythmias—avoid concomitant use); ritonavir possibly increases plasma concentration of ● **DISOPYRAMIDE** (increased risk of toxicity); avoidance of ritonavir advised by manufacturer of ● **DRONEDARONE**; ritonavir possibly increases plasma concentration of ● **FLECAINIDE** (increased risk of ventricular arrhythmias—avoid concomitant use)
- Antibacterials: ritonavir possibly increases plasma concentration of **AZITHROMYCIN** and **ERYTHROMYCIN**; ritonavir increases plasma concentration of ● **CLARITHROMYCIN** (reduce dose of clarithromycin in renal impairment); ritonavir increases plasma concentration of ● **RIFABUTIN** (increased risk of toxicity—reduce rifabutin dose); plasma concentration of ritonavir reduced by **RIFAMPICIN**; ritonavir possibly increases plasma concentration of **BEDAQUILINE**—manufacturer of ritonavir advises avoid concomitant use; ritonavir increases plasma concentration of **DELAMANID**; plasma concentration of both drugs increased when ritonavir given with ● **FUSIDIC ACID**—avoid concomitant use; avoidance of concomitant ritonavir in severe renal and hepatic impairment advised by manufacturer of ● **TELITHROMYCIN**
- Anticoagulants: ritonavir may enhance or reduce anticoagulant effect of ● **WARFARIN**; avoidance of ritonavir advised by manufacturer of **APIXABAN**; ritonavir possibly enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**; ritonavir increases plasma concentration of ● **RIVAROXABAN**—avoid concomitant use
- Antidepressants: ritonavir possibly reduces plasma concentration of **PAROXETINE**; ritonavir increases plasma concentration of ● **TRAZODONE** (increased risk of toxicity); ritonavir possibly increases plasma concentration of ● **SSRIs** and ● **TRICYCLICS**; plasma concentration of ritonavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- ▶ Antidiabetics: ritonavir possibly increases plasma concentration of **TOLBUTAMIDE**
- Antiepileptics: ritonavir possibly increases plasma concentration of ● **CARBAMAZEPINE**; plasma concentration of ritonavir possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly affected; ritonavir possibly reduces plasma concentration of **LAMOTRIGINE**, **SODIUM VALPROATE** and **VALPROIC ACID**
- Antifungals: ritonavir increases plasma concentration of
  - **KETOCONAZOLE** (reduce dose of ketoconazole); plasma concentration of ritonavir increased by **FLUCONAZOLE**; ritonavir increases plasma concentration of **ISAVUCONAZOLE** (also plasma concentration of ritonavir reduced)—avoid concomitant use of *high-dose* ritonavir; combination of

**Ritonavir**

- Antifungals (continued)
  - ritonavir with ● **ITRACONAZOLE** may increase plasma concentration of either drug (or both); ritonavir reduces plasma concentration of ● **VORICONAZOLE**—avoid concomitant use
- Antihistamines: ritonavir possibly increases plasma concentration of **NON-SEDATING ANTIHISTAMINES**
- Antimalarials: caution with ritonavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; plasma concentration of ritonavir possibly reduced by **MEFLOQUINE**; ritonavir increases plasma concentration of ● **QUININE** (increased risk of toxicity)
- Antimuscarinics: avoidance of ritonavir advised by manufacturer of **DARIFENACIN** and **TOLTERODINE**; manufacturer of fesoterodine advises dose reduction when ritonavir given with **FESOTERODINE**—consult fesoterodine product literature; ritonavir possibly increases plasma concentration of
  - **SOLIFENACIN**—see under Solifenacin, p. 713
- Antipsychotics: ritonavir possibly increases plasma concentration of ● **ANTIPSYCHOTICS**; ritonavir possibly increases plasma concentration of ● **ARIPIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); manufacturer of ritonavir advises avoid concomitant use with ● **CLOZAPINE** (increased risk of toxicity); ritonavir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; ritonavir reduces plasma concentration of **OLANZAPINE**—consider increasing dose of olanzapine; ritonavir increases plasma concentration of ● **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); ritonavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: plasma concentration of both drugs reduced when ritonavir given with ● **BOCEPREVIR**; manufacturer of ritonavir advises ritonavir and **DIDANOSINE** should be taken 2.5 hours apart; ritonavir increases the toxicity of ● **EFAVIRENZ**, monitor liver function tests—manufacturer of *Atripla*® advises avoid concomitant use with *high-dose* ritonavir; ritonavir increases plasma concentration of **INDINAVIR**, **MARAVIROC** and ● **SAQUINAVIR**; ritonavir increases plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; ritonavir possibly reduces plasma concentration of **TELAPREVIR**
- Anxiolytics and Hypnotics: ritonavir possibly increases plasma concentration of ● **ANXIOLYTICS AND HYPNOTICS**; ritonavir possibly increases plasma concentration of ● **ALPRAZOLAM**, ●  **DIAZEPAM**, ● **FLURAZEPAM** and ● **ZOLPIDEM** (risk of extreme sedation and respiratory depression—avoid concomitant use); ritonavir possibly increases plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam); ritonavir increases plasma concentration of **BUSPIRONE** (increased risk of toxicity)
- Appetit: ritonavir possibly increases plasma concentration of **APREPITANT**
- Atovaquone: ritonavir possibly reduces plasma concentration of **ATOVAQUONE**—manufacturer of atovaquone advises avoid concomitant use
- Avanafil: ritonavir significantly increases plasma concentration of ● **AVANAFIL**—avoid concomitant use
- Bosentan: ritonavir increases plasma concentration of ● **BOSENTAN** (consider reducing dose of bosentan)
- Bupropion: ritonavir reduces plasma concentration of **BUPROPION**
- Calcium-channel Blockers: ritonavir possibly increases plasma concentration of ● **CALCIUM-CHANNEL BLOCKERS**; ritonavir increases plasma concentration of ● **AMLODIPINE** (reduce dose of amlodipine); avoidance of ritonavir advised by manufacturer of **LERCANIDIPINE**
- Cardiac Glycosides: ritonavir possibly increases plasma concentration of **DIGOXIN**
- Ciclosporin: ritonavir possibly increases plasma concentration of ● **CICLOSPORIN**
- Cilostazol: ritonavir possibly increases plasma concentration of ● **CILOSTAZOL** (see under Cilostazol, p. 221)
- Cobicistat: avoidance of ritonavir advised by manufacturer of **COBICISTAT**

**Ritonavir** (continued)

- Colchicine: ritonavir possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Corticosteroids: ritonavir possibly increases plasma concentration of ● **CORTICOSTEROIDS**—increased risk of adrenal suppression; ritonavir possibly increases plasma concentration of ● **BUDESONIDE** (including *inhaled, intranasal, and rectal* budesonide)—increased risk of adrenal suppression; ritonavir increases plasma concentration of *inhaled and intranasal* ● **FLUTICASON**—increased risk of adrenal suppression; ritonavir increases plasma concentration of ● **TRIAMCINOLONE injection**—increased risk of adrenal suppression
- Cytotoxics: ritonavir increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of ritonavir by 6 to 12 hours; ritonavir possibly increases plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); ritonavir possibly increases the plasma concentration of ● **BOSUTINIB** and ● **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; ritonavir possibly increases plasma concentration of **CABOZANTINIB** and **VINBLASTINE**; ritonavir possibly increases plasma concentration of ● **CERITINIB**—avoid concomitant use or consider reducing the dose of ceritinib (see under Ceritinib, p. 861); ritonavir possibly increases plasma concentration of ● **CRIZOTINIB**, ● **EVEROLIMUS**, **NILOTINIB** and ● **VINFLUNINE**—manufacturer of crizotinib, everolimus, nilotinib and vinflunine advises avoid concomitant use; avoidance of ritonavir advised by manufacturer of **DASATINIB** (plasma concentration of dasatinib possibly increased); ritonavir possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, p. 867); avoidance of ritonavir advised by manufacturer of ● **LAPATINIB**; ritonavir possibly increases plasma concentration of ● **PAZOPANIB** (reduce dose of pazopanib); ritonavir possibly increases plasma concentration of **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, p. 873); manufacturer of ruxolitinib advises dose reduction when ritonavir given with ● **RUXOLITINIB**—consult ruxolitinib product literature; ritonavir possibly increases plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; ritonavir increases plasma concentration of **PACLITAXEL**; ritonavir possibly increases plasma concentration of ● **OLAPARIB** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
- Dapoxetine: avoidance of ritonavir advised by manufacturer of ● **DAPOXETINE** (increased risk of toxicity)
- Diuretics: ritonavir increases plasma concentration of ● **EPLERENONE**—avoid concomitant use
- Domperidone: possible increased risk of ventricular arrhythmias when ritonavir given with ● **DOMPERIDONE**—avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when ritonavir given with ● **ERGOT ALKALOIDS**—avoid concomitant use
- Fosaprepitant: ritonavir possibly increases plasma concentration of **FOSAPREPITANT**
- Guanfacine: ritonavir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- 5HT<sub>2</sub>-receptor Agonists: ritonavir increases plasma concentration of ● **ELETRIPTAN** (risk of toxicity)—avoid concomitant use
- Ivabradine: ritonavir possibly increases plasma concentration of ● **IVABRADINE**—avoid concomitant use
- Lipid-regulating Drugs: ritonavir possibly increases plasma concentration of **ATORVASTATIN** (use lowest possible dose of atorvastatin); possible increased risk of myopathy when ritonavir given with ● **ROSUVASTATIN**—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when ritonavir given with ● **SIMVASTATIN** (avoid concomitant use); avoidance of ritonavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)

**Ritonavir** (continued)

- ▶ Mirabegron: when given with ritonavir avoid or reduce dose of **MIRABEGRON** in hepatic or renal impairment—see Mirabegron, p. 715
- Naloxegol: ritonavir possibly increases plasma concentration of ● **NALOXEGOL**—avoid concomitant use
- Oestrogens: ritonavir accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFc)
- Orlistat: absorption of ritonavir possibly reduced by ● **ORLISTAT**
- Panobinostat: ritonavir possibly increases plasma concentration of ● **PANOBINOSTAT** (reduce dose of panobinostat—see under Panobinostat, p. 834)
- Ranolazine: ritonavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- ▶ Riociguat: avoidance of ritonavir advised by manufacturer of **RIOCIGUAT**
- Sildenafil: ritonavir significantly increases plasma concentration of ● **SILDENAFIL**—avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction (consult sildenafil product literature)
- ▶ Sympathomimetics: ritonavir possibly increases plasma concentration of **DEXAMFETAMINE**
- ▶ Sympathomimetics, Beta<sub>2</sub>: manufacturer of ritonavir advises avoid concomitant use with **SALMETEROL**
- Tacrolimus: ritonavir possibly increases plasma concentration of ● **TACROLIMUS**
- Tadalafil: ritonavir increases plasma concentration of ● **TADALAFIL**—avoid concomitant use of tadalafil for pulmonary hypertension
- Theophylline: ritonavir accelerates metabolism of ● **THEOPHYLLINE** (reduced plasma concentration)
- Ticagrelor: ritonavir possibly increases plasma concentration of ● **TICAGRELOR**—manufacturer of ticagrelor advises avoid concomitant use
- Ulipristal: avoidance of ritonavir advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)
- Vardenafil: ritonavir increases plasma concentration of ● **VARDENAFIL**—avoid concomitant use

**Rituximab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Rivaroxaban**

- Analgesics: increased risk of haemorrhage when anticoagulants given with *intravenous* ● **DICLOFENAC** (avoid concomitant use, including low-dose heparins); increased risk of haemorrhage when anticoagulants given with ● **KETOROLAC** (avoid concomitant use, including low-dose heparins)
- ▶ Anti-arrhythmics: manufacturer of rivaroxaban advises avoid concomitant use with **DRONEDARONE**
- Antibacterials: plasma concentration of rivaroxaban reduced by ● **RIFAMPICIN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Anticoagulants: increased risk of haemorrhage when rivaroxaban given with other ● **ANTICOAGULANTS** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency); increased risk of haemorrhage when other anticoagulants given with ● **APIXABAN**, ● **DABIGATRAN** and ● **EDOXYBAN** (avoid concomitant use except when switching with other anticoagulants or using heparin to maintain catheter patency)
- Antidepressants: plasma concentration of rivaroxaban possibly reduced by ● **ST JOHN'S WORT**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antiepileptics: plasma concentration of rivaroxaban possibly reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—manufacturer of rivaroxaban advises monitor for signs of thrombosis

**Rivaroxaban** (continued)

- Antifungals: plasma concentration of rivaroxaban increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of rivaroxaban advises avoid concomitant use with **ITRACONAZOLE**, **POSACONAZOLE** and **VORICONAZOLE**
- Antivirals: manufacturer of rivaroxaban advises avoid concomitant use with **ATAZANAVIR**, **DARUNAVIR**, **FOSAMPRENNAVIR**, **INDINAVIR**, **SAQUINAVIR** and **TIPRANAVIR**; manufacturers advise avoid concomitant use of rivaroxaban with **LOPINAVIR**; plasma concentration of rivaroxaban increased by ● **RITONAVIR**—avoid concomitant use
- Cobicistat: anticoagulant effect of rivaroxaban possibly enhanced by ● **COBICISTAT**—avoid concomitant use

**Rivastigmine** see Parasympathomimetics

**Rizatriptan** see 5HT<sub>1</sub>-receptor Agonists (under HT)

**Rocuronium** see Muscle Relaxants

**Roflumilast**

- ▶ Aminophylline: manufacturer of roflumilast advises avoid concomitant use with **AMINOPHYLLINE**
- Antibacterials: effects of roflumilast inhibited by ● **RIFAMPICIN** (manufacturer of roflumilast advises avoid concomitant use)
- ▶ Antidepressants: metabolism of roflumilast inhibited by **FLUVOXAMINE**
- ▶ Antiepileptics: effects of roflumilast possibly inhibited by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (manufacturer of roflumilast advises avoid concomitant use)
- ▶ Theophylline: manufacturer of roflumilast advises avoid concomitant use with **THEOPHYLLINE**
- ▶ Ulcer-healing Drugs: metabolism of roflumilast inhibited by **CIMETIDINE**

**Ropinirole**

- ▶ Antibacterials: metabolism of ropinirole inhibited by **CIPROFLOXACIN** (increased plasma concentration)
- ▶ Antipsychotics: manufacturer of ropinirole advises avoid concomitant use of **ANTIPSYCHOTICS** (antagonism of effect)
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyldopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Metoclopramide: manufacturer of ropinirole advises avoid concomitant use of **METOCLOPRAMIDE** (antagonism of effect)
- Oestrogens: plasma concentration of ropinirole increased by **OESTROGENS**

**Ropivacaine**

- Anti-arrhythmics: increased myocardial depression when ropivacaine given with **ANTI-ARRHYTHMICS**
- ▶ Antidepressants: metabolism of ropivacaine inhibited by **FLUVOXAMINE**—avoid prolonged administration of ropivacaine

**Rosuvastatin** see Statins

**Rotavirus Vaccine** see Vaccines

**Rotigotine**

- ▶ Antipsychotics: manufacturer of rotigotine advises avoid concomitant use of **ANTIPSYCHOTICS** (antagonism of effect)
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methyldopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**
- ▶ Metoclopramide: manufacturer of rotigotine advises avoid concomitant use of **METOCLOPRAMIDE** (antagonism of effect)

**Rufinamide**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: plasma concentration of both drugs possibly reduced when rufinamide given with **CARBAMAZEPINE**; plasma concentration of rufinamide possibly reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly increased; plasma concentration of rufinamide possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of rufinamide possibly increased by **SODIUM VALPROATE** and **VALPROIC ACID** (reduce dose of rufinamide)

**Rufinamide** (continued)

- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Oestrogens: rufinamide accelerates metabolism of
  - **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progestogens: rufinamide accelerates metabolism of
  - **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progestogen-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)

**Ruxolitinib**

- Antibacterials: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with ● **CLARITHROMYCIN** and ● **TELITHROMYCIN**—consult ruxolitinib product literature; plasma concentration of ruxolitinib reduced by **RIFAMPICIN**
- Antifungals: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **KETCONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE**—consult ruxolitinib product literature
- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: manufacturer of ruxolitinib advises dose reduction when ruxolitinib given with ● **BOCEPREVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **RITONAVIR**, ● **SAQUINAVIR** and ● **TELAPREVIR**—consult ruxolitinib product literature

**Sacubitril**

- ACE Inhibitors: manufacturer of sacubitril advises avoid ● **ACE INHIBITORS** for 36 hours before or after sacubitril
- ▶ Diuretics: sacubitril reduces plasma concentration of **FUROSEMIDE**
- ▶ Lipid-regulating Drugs: sacubitril increases plasma concentration of **ATORVASTATIN**

**St John's Wort**

- ▶ Aminophylline: St John's wort possibly reduces plasma concentration of **AMINOPHYLLINE**
- ▶ Analgesics: St John's wort possibly reduces plasma concentration of **METHADONE**
- Anti-arrhythmics: St John's wort possibly reduces plasma concentration of ● **DRONEDARONE**—avoid concomitant use
- Antibacterials: St John's wort possibly reduces plasma concentration of **BEDAQUILINE**—manufacturer of bedaquiline advises avoid concomitant use; St John's wort reduces plasma concentration of ● **TELITHROMYCIN** (avoid during and for 2 weeks after St John's wort)
- Anticoagulants: St John's wort possibly reduces plasma concentration of ● **APIXABAN**—manufacturer of apixaban advises avoid concomitant use when given for treatment of deep-vein thrombosis or pulmonary embolism; St John's wort reduces anticoagulant effect of ● **COUMARINS** (avoid concomitant use); St John's wort possibly reduces plasma concentration of **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use; St John's wort possibly reduces plasma concentration of ● **EDOXABAN**; St John's wort possibly reduces plasma concentration of ● **RIVAROXABAN**—manufacturer of rivaroxaban advises monitor for signs of thrombosis
- Antidepressants: possible increased serotonergic effects when St John's wort given with **DULOXETINE**, **VENLAFAXINE** or **VORTIOXETINE**; St John's wort reduces plasma concentration of **AMITRIPTYLINE**; increased serotonergic effects when St John's wort given with ● **SSRIS**—avoid concomitant use
- Antiepileptics: St John's wort possibly reduces plasma concentration of **CARBAMAZEPINE**; St John's wort possibly reduces plasma concentration of ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**—avoid concomitant use
- Antifungals: St John's wort possibly reduces plasma concentration of ● **ISAVUCONAZOLE**—avoid concomitant use;

**St John's Wort**

- Antifungals (continued)
  - St John's wort reduces plasma concentration of ● **VORICONAZOLE**—avoid concomitant use
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- Antimuscarinics: St John's wort possibly reduces plasma concentration of active metabolite of ● **FESOTERODINE**—manufacturer of fesoterodine advises avoid concomitant use
- Antipsychotics: St John's wort possibly reduces plasma concentration of ● **ARIPIPIRAZOLE** (avoid concomitant use or consider increasing the dose of aripiprazole—consult aripiprazole product literature); St John's wort possibly reduces plasma concentration of ● **LURASIDONE**—avoid concomitant use
- Antivirals: St John's wort reduces plasma concentration of ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **EFAVIRENZ**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **NEVIRAPINE**, ● **RITONAVIR** and ● **SAQUINAVIR**—avoid concomitant use; St John's wort possibly reduces plasma concentration of **DACLATASVIR**, ● **DASABUVIR**, ● **OMBITASVIR**, ● **PARITAPREVIR** and ● **SIMEPREVIR**—manufacturer of daclatasvir, dasabuvir, ombitasvir, paritaprevir and simeprevir advises avoid concomitant use; St John's wort possibly reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); avoidance of St John's wort advised by manufacturer of ● **ELVITEGRAVIR**, **ETRAVIRINE**, **LEDIPASVIR**, **SOFOSBUVIR** and ● **TELAPREVIR**; St John's wort possibly reduces plasma concentration of ● **MARAVIROC** and ● **TIPRANAVIR**—avoid concomitant use; avoidance of St John's wort advised by manufacturer of ● **RILPIVIRINE** (plasma concentration of rilpivirine possibly reduced)
  - ▶ Anxiolytics and Hypnotics: St John's wort possibly reduces plasma concentration of *oral* **MIDAZOLAM**
- Apremilast: St John's wort possibly reduces plasma concentration of ● **APREMILAST**—avoid concomitant use
- Aprepitant: avoidance of St John's wort advised by manufacturer of ● **APREPITANT**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- Calcium-channel Blockers: St John's wort possibly reduces plasma concentration of **AMLODIPINE** and **FELODIPINE**; St John's wort reduces plasma concentration of **NIFEDIPINE**; St John's wort significantly reduces plasma concentration of ● **VERAPAMIL**
- Cannabis Extract: St John's wort possibly reduces plasma concentration of ● **CANNABIS EXTRACT**—manufacturer of cannabis extract advises avoid concomitant use
- Cardiac Glycosides: St John's wort reduces plasma concentration of ● **DIGOXIN**—avoid concomitant use
- Ciclosporin: St John's wort reduces plasma concentration of ● **CICLOSPORIN**—avoid concomitant use
- Cobicistat: St John's wort possibly reduces plasma concentration of ● **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use
- Cytotoxics: St John's wort possibly reduces plasma concentration of **AXITINIB**—consider increasing dose of axitinib; St John's wort possibly reduces plasma concentration of **BORTEZOMIB**, ● **BOSUTINIB**, **CABOZANTINIB**, **CRIZOTINIB**, **EVEROLIMUS**, ● **IBRUTINIB**, ● **IDELALISIB**, **PONATINIB** and ● **VINFLUNINE**—manufacturer of bortezomib, bosutinib, cabozantinib, crizotinib, everolimus, ibrutinib, idelalisib, ponatinib and vinflunine advises avoid concomitant use; St John's wort possibly reduces plasma concentration of ● **CERTINIB**—avoid concomitant use; avoidance of St John's wort advised by manufacturer of ● **CABAZITAXEL**, **DABRAFENIB**, **GEFITINIB**, ● **LAPATINIB**, ● **OLAPARIB** and **VENURAFENIB**; St John's wort reduces plasma concentration of ● **IMATINIB**—avoid concomitant use; avoidance of St John's wort advised by manufacturer of **VANDETANIB** and ● **VISMODEGIB** (plasma concentration of vandetanib and vismodegib possibly reduced); St John's wort possibly reduces plasma concentration of **ERIBULIN**; St John's wort accelerates metabolism of ● **IRINOTECAN** (reduced plasma concentration—avoid concomitant use)

**St John's Wort** (continued)

- Dapoxetine: possible increased risk of serotonergic effects when St John's wort given with ● **DAPOXETINE** (manufacturer of dapoxetine advises St John's wort should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping St John's wort)
- Diuretics: St John's wort reduces plasma concentration of ● **EPLERENONE**—avoid concomitant use
- ▶ **Fingolimod**: St John's wort possibly reduces plasma concentration of **FINGOLIMOD**—manufacturer of fingolimod advises avoid concomitant use
- Fosaprepitant: avoidance of St John's wort advised by manufacturer of ● **FOSAPREPITANT**
- Guanfacine: St John's wort possibly reduces plasma concentration of ● **GUANFACINE**—increase dose of guanfacine
- Hormone Antagonists: St John's wort possibly reduces plasma concentration of ● **ABIRATERONE**—manufacturer of abiraterone advises avoid concomitant use
- 5HT<sub>2</sub>-receptor Agonists: increased serotonergic effects when St John's wort given with ● **5HT<sub>2</sub> AGONISTS**—avoid concomitant use
- ▶ **Ivabradine**: St John's wort reduces plasma concentration of **IVABRADINE**—avoid concomitant use
- Ivacaftor: St John's wort possibly reduces plasma concentration of ● **IVACAFTOR**—manufacturer of ivacaftor advises avoid concomitant use
- ▶ **Lipid-regulating Drugs**: St John's wort reduces plasma concentration of **SIMVASTATIN**
- ▶ **Lumacaftor**: avoidance of St John's wort advised by manufacturer of **LUMACAFTOR**
- ▶ **Macitentan**: avoidance of St John's wort advised by manufacturer of **MACITENTAN**
- Naloxegol: St John's wort possibly reduces plasma concentration of ● **NALOXEGOL**—avoid concomitant use
- Oestrogens: St John's wort reduces contraceptive effect of ● **OESTROGENS** (avoid concomitant use)
- ▶ **Panobinostat**: avoidance of St John's wort advised by manufacturer of **PANOBINOSTAT**
- Progestogens: St John's wort reduces contraceptive effect of ● **PROGESTOGENS** (avoid concomitant use)
- Tacrolimus: St John's wort reduces plasma concentration of ● **TACROLIMUS**—avoid concomitant use
- ▶ **Theophylline**: St John's wort possibly reduces plasma concentration of **THEOPHYLLINE**
- ▶ **Ulcer-healing Drugs**: St John's wort possibly reduces plasma concentration of **OMEPRAZOLE**
- Ulipristal: avoidance of St John's wort advised by manufacturer of ● **ULIPRISTAL** (contraceptive effect of ulipristal possibly reduced)

**Saibutamol** see Sympathomimetics, Beta<sub>2</sub>

**Salmeterol** see Sympathomimetics, Beta<sub>2</sub>

**Saquinavir**

- Analgesics: increased risk of ventricular arrhythmias when saquinavir given with ● **ALFENTANIL**, ● **FENTANYL** or ● **METHADONE**—avoid concomitant use
- Anti-arrhythmics: increased risk of ventricular arrhythmias when saquinavir given with ● **AMIODARONE**, ● **DISOPYRAMIDE**, ● **DRONEDARONE**, ● **FLECAINIDE**, ● **LIDOCAINE** or ● **PROPAFENONE**—avoid concomitant use
- Antibacterials: plasma concentration of both drugs possibly increased when saquinavir given with ● **CLARITHROMYCIN** (increased risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when saquinavir given with ● **DAPSONE**, ● **ERYTHROMYCIN** or ● **MOXIFLOXACIN**—avoid concomitant use; saquinavir increases plasma concentration of ● **RIFABUTIN** (also plasma concentration of saquinavir reduced)—reduce rifabutin dose; plasma concentration of saquinavir significantly reduced by ● **RIFAMPICIN**, also risk of hepatotoxicity—avoid concomitant use; increased risk of ventricular arrhythmias when saquinavir given with ● **DELAMANID**; plasma concentration of both drugs may increase when saquinavir given with **FUSIDIC ACID**; avoidance of saquinavir advised by manufacturer of ● **TELITHROMYCIN** (risk of ventricular arrhythmias)

**Saquinavir** (continued)

- ▶ **Anticoagulants**: saquinavir possibly enhances anticoagulant effect of **WARFARIN**; avoidance of saquinavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**
- Antidepressants: increased risk of ventricular arrhythmias when saquinavir given with ● **TRAZODONE** or ● **TRICYCLICS**—avoid concomitant use; plasma concentration of saquinavir reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- Antiepileptics: plasma concentration of saquinavir possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, ● **PHENOBARBITAL**, **PHENYTOIN** and ● **PRIMIDONE**
- Antifungals: plasma concentration of saquinavir increased by ● **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; plasma concentration of saquinavir possibly increased by **IMIDAZOLES** and **TRIAZOLES**
- Antiasthmatics: increased risk of ventricular arrhythmias when saquinavir given with ● **MIZOLASTINE**—avoid concomitant use
- Antimalarials: caution with saquinavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; avoidance of saquinavir advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE** (possible risk of ventricular arrhythmias); increased risk of ventricular arrhythmias when saquinavir given with ● **QUININE**—avoid concomitant use
- ▶ **Antimuscarinics**: avoidance of saquinavir advised by manufacturer of **DARIFENACIN** and **TOLTERODINE**; manufacturer of fesoterodine advises dose reduction when saquinavir given with **FESOTERODINE**—consult fesoterodine product literature
- Antipsychotics: increased risk of ventricular arrhythmias when saquinavir given with ● **CLOZAPINE**, ● **HALOPERIDOL** or ● **PHENOTHIAZINES**—avoid concomitant use; saquinavir possibly increases plasma concentration of ● **ARIPIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); saquinavir possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; saquinavir possibly increases plasma concentration of ● **PIMOZIDE** (increased risk of ventricular arrhythmias—avoid concomitant use); saquinavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: increased risk of ventricular arrhythmias when saquinavir given with ● **ATAZANAVIR** or ● **LOPINAVIR**—avoid concomitant use; saquinavir reduces plasma concentration of **DARUNAVIR**—avoid concomitant use; plasma concentration of saquinavir significantly reduced by **EFAVIRENZ**; plasma concentration of saquinavir increased by **INDINAVIR** and ● **RITONAVIR**; saquinavir increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); avoidance of saquinavir advised by manufacturer of **PARITAPREVIR**; plasma concentration of saquinavir reduced by ● **TIPRANAVIR**
- Anxiolytics and Hypnotics: saquinavir increases plasma concentration of ● **MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of oral midazolam)
- Avanafl: saquinavir possibly increases plasma concentration of ● **AVANAFIL**—manufacturer of avanafil advises avoid concomitant use
- Beta-blockers: increased risk of ventricular arrhythmias when saquinavir given with ● **SOTALOL**—avoid concomitant use
- Ciclosporin: plasma concentration of both drugs increased when saquinavir given with ● **CICLOSPORIN**
- ▶ **Corticosteroids**: plasma concentration of saquinavir possibly reduced by **DEXAMETHASONE**
- Cytotoxics: saquinavir possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of saquinavir by 6 to 12 hours; saquinavir possibly increases plasma concentration of **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); saquinavir possibly increases the plasma concentration of ● **BOSUTINIB** and ● **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; saquinavir possibly increases plasma concentration of ● **CERITINIB**—avoid concomitant use or consider reducing the dose of ceritinib (see under Ceritinib, p. 861); saquinavir possibly increases plasma concentration of ● **CRIZOTINIB** and ● **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; saquinavir possibly increases

## Saqueinavir

- Cytotoxics (continued)
  - the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, p. 867); avoidance of saqueinavir advised by manufacturer of ● **LAPATINIB**; increased risk of ventricular arrhythmias when saqueinavir given with ● **PAZOPANIB**—avoid concomitant use; saqueinavir possibly increases plasma concentration of ● **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, p. 873); manufacturer of ruxolitinib advises dose reduction when saqueinavir given with ● **RUXOLITINIB**—consult ruxolitinib product literature; saqueinavir possibly increases plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose
- Dapoxetine: avoidance of saqueinavir advised by manufacturer of ● **DAPOXETINE** (increased risk of toxicity)
- ▶ Diuretics: saqueinavir increases plasma concentration of ● **EPLERENONE** (reduce dose of eplerenone)
- Domperidone: possible increased risk of ventricular arrhythmias when saqueinavir given with ● **DOMPERIDONE**—avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when saqueinavir given with ● **ERGOTAMINE**—avoid concomitant use
- Guanfacine: saqueinavir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- Lipid-regulating Drugs: possible increased risk of myopathy when saqueinavir given with ● **ATORVASTATIN**; possible increased risk of myopathy when saqueinavir given with ● **ROSUVASTATIN**—manufacturer of rosuvastatin advises avoid concomitant use; increased risk of myopathy when saqueinavir given with ● **SIMVASTATIN** (avoid concomitant use); avoidance of saqueinavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Naloxegol: saqueinavir possibly increases plasma concentration of ● **NALOXEGOL**—avoid concomitant use
- Orlistat: absorption of saqueinavir possibly reduced by ● **ORLISTAT**
- Panobinostat: saqueinavir possibly increases plasma concentration of ● **PANOBINOSTAT** (reduce dose of panobinostat—see under Panobinostat, p. 834)
- Pentamidine Isetionate: increased risk of ventricular arrhythmias when saqueinavir given with ● **PENTAMIDINE ISETIONATE**—avoid concomitant use
- Ranolazine: saqueinavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: increased risk of ventricular arrhythmias when saqueinavir given with ● **SILDENAFIL**—avoid concomitant use
- Tacrolimus: saqueinavir increases plasma concentration of ● **TACROLIMUS** (consider reducing dose of tacrolimus)
- Tadalafil: increased risk of ventricular arrhythmias when saqueinavir given with ● **TADALAFIL**—avoid concomitant use
- Ulcer-healing Drugs: plasma concentration of saqueinavir possibly increased by ● **CIMETIDINE**; plasma concentration of saqueinavir possibly increased by ● **ESOMEPRAZOLE**, ● **LANSOPRAZOLE**, ● **PANTOPRAZOLE** and ● **RABEPRAZOLE**—manufacturer of saqueinavir advises avoid concomitant use; plasma concentration of saqueinavir increased by ● **OMEPRAZOLE**—manufacturer of saqueinavir advises avoid concomitant use
- Vardenafil: increased risk of ventricular arrhythmias when saqueinavir given with ● **VARDENAFIL**—avoid concomitant use

**Saxagliptin** see Antidiabetics

## Secukinumab

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

## Selegiline

**NOTE** Selegiline is a MAO-B inhibitor

- Analgesics: hyperpyrexia and CNS toxicity reported when selegiline given with ● **PETHIDINE** (avoid concomitant use); manufacturer of selegiline advises avoid concomitant use with ● **OPIOID ANALGESICS**

## Selegiline (continued)

- Antidepressants: manufacturer of selegiline advises avoid concomitant use with ● **CITALOPRAM** and ● **ESCITALOPRAM**; increased risk of hypertension and CNS excitation when selegiline given with ● **FLOXETINE** (selegiline should not be started until 5 weeks after stopping fluoxetine, avoid fluoxetine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when selegiline given with ● **FLUVOXAMINE**, ● **SERTRALINE** or ● **VENLAFAXINE** (selegiline should not be started until 1 week after stopping fluvoxamine, sertraline or venlafaxine, avoid fluvoxamine, sertraline or venlafaxine for 2 weeks after stopping selegiline); increased risk of hypertension and CNS excitation when selegiline given with ● **PAROXETINE** (selegiline should not be started until 2 weeks after stopping paroxetine, avoid paroxetine for 2 weeks after stopping selegiline); enhanced hypotensive effect when selegiline given with ● **MAOIS**—manufacturer of selegiline advises avoid concomitant use; avoid concomitant use of selegiline with ● **MOCLOBEMIDE**; CNS toxicity reported when selegiline given with ● **TRICYCLICS**; risk of CNS excitation and hypertension when selegiline given with ● **VORTIOXETINE**
- ▶ Dopaminergics: selegiline enhances effects and increases toxicity of ● **CO-BENELDOPA**, ● **CO-CARELDOPA** or ● **LEVODOPA** (reduce dose of co-beneldopa, co-careldopa or levodopa); max. dose of 10 mg selegiline advised by manufacturer of ● **ENTACAPONE** if used concomitantly
- ▶ 5HT<sub>2</sub>-receptor Agonists: manufacturer of selegiline advises avoid concomitant use with ● **5HT<sub>2</sub> AGONISTS**
- ▶ Memantine: effects of dopaminergics and selegiline possibly enhanced by ● **MEMANTINE**
- ▶ Methylidopa: antiparkinsonian effect of dopaminergics antagonised by ● **METHYLDOPA**
- Oestrogens: plasma concentration of selegiline increased by ● **OESTROGENS**—manufacturer of selegiline advises avoid concomitant use
- Progestogens: plasma concentration of selegiline increased by ● **PROGESTOGENS**—manufacturer of selegiline advises avoid concomitant use
- Sympathomimetics: manufacturer of selegiline advises avoid concomitant use with ● **SYMPATHOMIMETICS**; risk of hypertensive crisis when selegiline given with ● **DOPAMINE**

## Selenium

- ▶ Eltrombopag: selenium possibly reduces absorption of ● **ELTROMBOPAG** (give at least 4 hours apart)
- ▶ Vitamins: absorption of selenium possibly reduced by ● **ASCORBIC ACID** (give at least 4 hours apart)

**Sertraline** see Antidepressants, SSRI

## Sevelamer

- ▶ Antibacterials: sevelamer reduces absorption of ● **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin)
- ▶ Ciclosporin: sevelamer possibly reduces plasma concentration of ● **CYCLOSPORIN**
- ▶ Mycophenolate: sevelamer possibly reduces plasma concentration of ● **MYCOPHENOLATE**
- ▶ Tacrolimus: sevelamer possibly reduces plasma concentration of ● **TACROLIMUS**
- ▶ Thyroid Hormones: sevelamer possibly reduces absorption of ● **LEVOTHYROXINE**
- ▶ Vitamins: sevelamer reduces absorption of ● **CALCITRIOL** (give at least 1 hour before or 3 hours after sevelamer)

**Sevoflurane** see Anaesthetics, General

## Sildenafil

- Alpha-blockers: enhanced hypotensive effect when sildenafil given with ● **ALPHA-BLOCKERS** (avoid alpha-blockers for 4 hours after sildenafil)—when patient is stable on the alpha blocker initiate sildenafil at the lowest possible dose
- ▶ Anti-arrhythmics: avoidance of sildenafil advised by manufacturer of ● **DISOPYRAMIDE** (risk of ventricular arrhythmias)
- Antibacterials: plasma concentration of sildenafil increased by ● **CLARITHROMYCIN**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension; plasma concentration of sildenafil increased by ● **ERYTHROMYCIN**—reduce initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to twice daily for pulmonary hypertension; plasma

**Sildenafil**

- **Antibacterials** (continued)
  - concentration of sildenafil possibly increased by
    - **TELITHROMYCIN**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension
- **Antifungals**: plasma concentration of sildenafil increased by
  - **KETOCONAZOLE**—reduce initial dose of sildenafil for erectile dysfunction and avoid concomitant use of sildenafil for pulmonary hypertension; plasma concentration of sildenafil increased by **ITRACONAZOLE**—reduce initial dose of sildenafil
- **Antivirals**: plasma concentration of sildenafil reduced by **ETRAVIRINE**; plasma concentration of sildenafil possibly increased by **FOSAMPRENAVIR**; plasma concentration of sildenafil increased by • **INDINAVIR**—reduce initial dose of sildenafil; plasma concentration of sildenafil significantly increased by • **RITONAVIR**—avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction (consult sildenafil product literature); increased risk of ventricular arrhythmias when sildenafil given with • **SAQUINAVIR**—avoid concomitant use; avoidance of sildenafil advised by manufacturer of
  - **TELAPREVIR**; avoidance of sildenafil for pulmonary arterial hypertension advised by manufacturer of **TIPRANAVIR**
- ▶ **Bosentan**: plasma concentration of sildenafil reduced by **BOSENTAN**, also plasma concentration of bosentan increased
- ▶ **Calcium-channel Blockers**: enhanced hypotensive effect when sildenafil given with **AMLODIPINE**
- **Cobicistat**: plasma concentration of sildenafil possibly increased by • **COBICISTAT**—manufacturer of cobicistat advises avoid concomitant use of sildenafil for pulmonary arterial hypertension or reduce dose of sildenafil for erectile dysfunction—consult cobicistat product literature
- ▶ **Cytotoxics**: avoidance of sildenafil for pulmonary arterial hypertension advised by manufacturer of **IDELALISIB**
- ▶ **Dapoxetine**: avoidance of sildenafil advised by manufacturer of **DAPOXETINE**
- ▶ **Grapefruit Juice**: plasma concentration of sildenafil possibly increased by **GRAPEFRUIT JUICE**
- **Nicorandil**: sildenafil significantly enhances hypotensive effect of • **NICORANDIL** (avoid concomitant use)
- **Nitrates**: sildenafil significantly enhances hypotensive effect of • **NITRATES** (avoid concomitant use)
- **Riociguat**: enhanced hypotensive effect when sildenafil given with • **RIOCIQUAT**—avoid concomitant use
- ▶ **Ulcer-healing Drugs**: plasma concentration of sildenafil increased by **CIMETIDINE**—consider reducing dose of sildenafil for erectile dysfunction

**Siltuximab**

- **Antipsychotics**: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- **Vaccines**: risk of generalised infections when monoclonal antibodies given with live • **VACCINES**—avoid concomitant use

**Simeprevir**

- **Anti-arrhythmics**: possible increased risk of bradycardia when simeprevir (with sofosbuvir) given with • **AMIODARONE**—see under Amiodarone, p. 99
- **Antibacterials**: plasma concentration of simeprevir possibly increased by • **CLARITHROMYCIN** and • **TELITHROMYCIN**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs increased when simeprevir given with • **ERYTHROMYCIN**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir possibly reduced by **RIFABUTIN**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir reduced by • **RIFAMPICIN**—manufacturer of simeprevir advises avoid concomitant use
- **Antidepressants**: plasma concentration of simeprevir possibly reduced by • **ST JOHN'S WORT**—manufacturer of simeprevir advises avoid concomitant use
- **Antiepileptics**: plasma concentration of simeprevir possibly reduced by • **CARBAMAZEPINE**, • **FOSPHENYTOIN**, • **OXCARBAZEPINE**, • **PHENOBARBITAL**, • **PHENYTOIN** and • **PRIMIDONE**—manufacturer of simeprevir advises avoid concomitant use

**Simeprevir** (continued)

- **Antifungals**: manufacturer of simeprevir advises avoid concomitant use with • **KETOCONAZOLE**; plasma concentration of simeprevir possibly increased by • **FLUCONAZOLE**, • **ITRACONAZOLE**, • **POSACONAZOLE** and • **VORICONAZOLE**—manufacturer of simeprevir advises avoid concomitant use
- **Antivirals**: plasma concentration of both drugs increased when simeprevir given with • **DARUNAVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir reduced by **EFAVIREN**; manufacturer of simeprevir advises avoid concomitant use with **ETRAVIRINE**; plasma concentration of both drugs increased when simeprevir given with **LEDIPASVIR**—manufacturer of ledipasvir advises avoid concomitant use; plasma concentration of simeprevir possibly reduced by • **NEVIRAPINE**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of simeprevir increased by • **RITONAVIR**—manufacturer of simeprevir advises avoid concomitant use
  - ▶ **Anxiolytics and Hypnotics**: simeprevir increases plasma concentration of *oral* **MIDAZOLAM**
  - ▶ **Cardiac Glycosides**: simeprevir increases plasma concentration of **DIGOXIN**
- **Cobicistat**: plasma concentration of simeprevir possibly increased by • **COBICISTAT**—manufacturer of simeprevir advises avoid concomitant use
- ▶ **Corticosteroids**: plasma concentration of simeprevir possibly reduced by **DEXAMETHASONE**—manufacturer of simeprevir advises avoid concomitant use
- ▶ **Lipid-regulating Drugs**: simeprevir increases plasma concentration of **ATORVASTATIN**, **ROSUVASTATIN** and **SIMVASTATIN** (consider reducing dose of atorvastatin, rosuvastatin and simvastatin)

**Simvastatin** see Statins**Sirolimus**

- ▶ **Anti-arrhythmics**: caution with sirolimus advised by manufacturer of **DRONEDARONE**
- **Antibacterials**: plasma concentration of sirolimus increased by • **CLARITHROMYCIN** and • **TELITHROMYCIN**—avoid concomitant use; plasma concentration of both drugs increased when sirolimus given with • **ERYTHROMYCIN**; plasma concentration of sirolimus reduced by • **RIFABUTIN** and • **RIFAMPICIN**—avoid concomitant use
- **Antifungals**: plasma concentration of sirolimus increased by • **ITRACONAZOLE**, • **KETOCONAZOLE** and • **VORICONAZOLE**—avoid concomitant use; plasma concentration of sirolimus increased by **ISAVUCONAZOLE**, **MICAFUNGIN** and • **MICONAZOLE**; plasma concentration of sirolimus possibly increased by **FLUCONAZOLE** and **POSACONAZOLE**
- **Antivirals**: plasma concentration of sirolimus possibly increased by • **ATAZANAVIR** and **LOPINAVIR**; plasma concentration of sirolimus increased by • **BOCEPREVIR** (increased risk of toxicity—reduce sirolimus dose); plasma concentration of both drugs increased when sirolimus given with • **TELAPREVIR** (reduce dose of sirolimus)
- **Calcium-channel Blockers**: plasma concentration of sirolimus possibly increased by **NICARDIPINE**; plasma concentration of sirolimus increased by • **DILTIAZEM**; plasma concentration of both drugs increased when sirolimus given with • **VERAPAMIL**
- ▶ **Cyclosporin**: plasma concentration of sirolimus increased by **CYCLOSPORIN**
- **Cytotoxics**: avoidance of sirolimus advised by manufacturer of **CERTINIB**; caution with sirolimus advised by manufacturer of • **CRIZOTINIB**
- **Grapefruit Juice**: plasma concentration of sirolimus increased by • **GRAPEFRUIT JUICE**—avoid concomitant use
- ▶ **Lumacaftor**: avoidance of sirolimus advised by manufacturer of **LUMACAFTOR**

**Sitagliptin** see Antidiabetics**Smallpox Vaccine** see Vaccines**Sodium Aurothiomalate**

- **ACE Inhibitors**: flushing and hypotension reported when sodium aurothiomalate given with • **ACE INHIBITORS**
- **Penicillamine**: increased risk of haematological toxicity when sodium aurothiomalate given with • **PENICILLAMINE**—see under Penicillamine, p. 964)

**Sodium Benzoate**

- ▶ Antiepileptics: effects of sodium benzoate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
- ▶ Antipsychotics: effects of sodium benzoate possibly reduced by **HALOPERIDOL**
- ▶ Corticosteroids: effects of sodium benzoate possibly reduced by **CORTICOSTEROIDS**

**Sodium Bicarbonate** *see* Antacids

**Sodium Citrate**

- ▶ Antibacterials: avoid concomitant use of sodium citrate with **METHENAMINE**
- ▶ Ulcer-healing Drugs: avoidance of sodium citrate advised by manufacturer of **SUCRALFATE**

**Sodium Clodronate** *see* Bisphosphonates

**Sodium Feredetate** *see* Iron salts

**Sodium Nitroprusside** *see* Vasodilator Antihypertensives

**Sodium Oxybate**

- Analgesics: effects of sodium oxybate enhanced by ● **OPIOID ANALGESICS** (avoid concomitant use)
- ▶ Antidepressants: increased risk of side-effects when sodium oxybate given with **TRICYCLICS**
- Antiepileptics: manufacturer of sodium oxybate advises avoid concomitant use with **PHENOBARBITAL** and **PRIMIDONE**; plasma concentration of sodium oxybate increased by ● **SODIUM VALPROATE** and ● **VALPROIC ACID** (*see* under Sodium Oxybate, p. 455)
- ▶ Antipsychotics: effects of sodium oxybate possibly enhanced by **ANTIPSYCHOTICS**
- Anxiolytics and Hypnotics: effects of sodium oxybate enhanced by ● **BENZODIAZEPINES** (avoid concomitant use)

**Sodium Phenylbutyrate**

- ▶ Antiepileptics: effects of sodium phenylbutyrate possibly reduced by **SODIUM VALPROATE** and **VALPROIC ACID**
- ▶ Antipsychotics: effects of sodium phenylbutyrate possibly reduced by **HALOPERIDOL**
- ▶ Corticosteroids: effects of sodium phenylbutyrate possibly reduced by **CORTICOSTEROIDS**

**Sodium Stibogluconate**

- Antifungals: possible increased risk of arrhythmias when sodium stibogluconate given before ● **AMPHOTERICIN**—manufacturer of sodium stibogluconate advises giving 14 days apart

**Sodium Valproate**

- ▶ Analgesics: effects of sodium valproate enhanced by **ASPIRIN**
- Antibacterials: metabolism of sodium valproate possibly inhibited by **ERYTHROMYCIN** (increased plasma concentration); avoidance of sodium valproate advised by manufacturer of ● **PIVMICILLINAM**; plasma concentration of sodium valproate reduced by ● **CARBAPENEMS**—avoid concomitant use
- ▶ Anticoagulants: sodium valproate possibly enhances anticoagulant effect of **COUMARINS**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of sodium valproate reduced by **CARBAMAZEPINE**, also plasma concentration of active metabolite of carbamazepine increased; sodium valproate possibly increases plasma concentration of **ETHOSUXIMIDE**; sodium valproate increases or possibly decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of sodium valproate reduced; sodium valproate increases plasma concentration of ● **LAMOTRIGINE** (increased risk of toxicity—reduce lamotrigine dose); sodium valproate sometimes reduces plasma concentration of an active metabolite of **OXCARBAZEPINE**; sodium valproate increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE** (also plasma concentration of sodium valproate reduced); sodium valproate possibly increases plasma concentration of **RUFINAMIDE** (reduce dose of rufinamide); hyperammonaemia and CNS toxicity reported when sodium valproate given with **TOPIRAMATE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**

**Sodium Valproate** (continued)

- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); sodium valproate possibly increases or decreases plasma concentration of **CLOZAPINE**; increased risk of side-effects including neutropenia when sodium valproate given with ● **OLANZAPINE**
- ▶ Antivirals: plasma concentration of sodium valproate possibly reduced by **RITONAVIR**; sodium valproate possibly increases plasma concentration of **ZIDOVUDINE** (increased risk of toxicity)
- ▶ Anxiolytics and Hypnotics: plasma concentration of sodium valproate possibly increased by **CLOBAZAM**; increased risk of side-effects when sodium valproate given with **CLONAZEPAM**; sodium valproate possibly increases plasma concentration of **DIAZEPAM** and **LORAZEPAM**
- ▶ Bupropion: sodium valproate inhibits the metabolism of **BUPROPION**
- ▶ Cytotoxics: sodium valproate increases plasma concentration of **TEMOZOLOMIDE**
- ▶ Guanfacine: plasma concentration of sodium valproate increased by **GUANFACINE**
- ▶ Lipid-regulating Drugs: absorption of sodium valproate possibly reduced by **COLESTYRAMINE**
- ▶ Oestrogens: plasma concentration of sodium valproate possibly reduced by **ETHINYLESTRADIOL**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- ▶ Sodium Benzoate: sodium valproate possibly reduces effects of **SODIUM BENZOATE**
- Sodium Oxybate: sodium valproate increases the plasma concentration of ● **SODIUM OXYBATE** (*see* under Sodium Oxybate, p. 455)
- ▶ Sodium Phenylbutyrate: sodium valproate possibly reduces effects of **SODIUM PHENYLBUTYRATE**
- Ulcer-healing Drugs: metabolism of sodium valproate inhibited by ● **CIMETIDINE** (increased plasma concentration)

**Sofosbuvir**

- Anti-arrhythmics: possible increased risk of bradycardia when sofosbuvir given with ● **AMIODARONE**—*see* under Amiodarone, p. 99
- ▶ Antibacterials: manufacturer of sofosbuvir advises avoid concomitant use with **RIFABUTIN** and **RIFAMPICIN**
- ▶ Antidepressants: manufacturer of sofosbuvir advises avoid concomitant use with **ST JOHN'S WORT**
- ▶ Antiepileptics: manufacturer of sofosbuvir advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN**, **OXCARBAZEPINE**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**

**Solifenacin** *see* Antimuscarinics

**Somatropin**

- ▶ Corticosteroids: growth-promoting effect of somatropin may be inhibited by **CORTICOSTEROIDS**
- ▶ Oestrogens: increased doses of somatropin may be needed when given with **OESTROGENS** (when used as oral replacement therapy)

**Sorafenib**

- ▶ Antibacterials: bioavailability of sorafenib reduced by **NEOMYCIN**; plasma concentration of sorafenib reduced by **RIFAMPICIN**
- Anticoagulants: sorafenib possibly enhances anticoagulant effect of ● **COUMARINS**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of sorafenib advised by manufacturer of ● **BOCEPREVIR**
- ▶ Cytotoxics: sorafenib increases plasma concentration of **DOCETAXEL** and **DOXORUBICIN**; sorafenib possibly increases plasma concentration of **IRINOTECAN**

**Sotalol** *see* Beta-blockers

**Spirolonactone** *see* Diuretics

**Statins**

- ▶ Antacids: absorption of rosuvastatin reduced by **ANTACIDS**
- Anti-arrhythmics: increased risk of myopathy when simvastatin given with ● **AMIODARONE** (*see* under Simvastatin, p. 194); increased risk of myopathy when simvastatin given with ● **DRONEDARONE**; plasma concentration of atorvastatin

## Statins

- Anti-arrhythmics (continued)
  - possibly increased by **DRONEDARONE**; plasma concentration of rosuvastatin increased by ● **DRONEDARONE**—adjust dose of rosuvastatin (consult product literature)
- Antibacterials: possible increased risk of myopathy when atorvastatin or simvastatin given with ● **AZITHROMYCIN**; plasma concentration of atorvastatin and pravastatin increased by ● **CLARITHROMYCIN**; increased risk of myopathy when simvastatin given with ● **CLARITHROMYCIN**, ● **ERYTHROMYCIN** or ● **TELITHROMYCIN** (avoid concomitant use); plasma concentration of rosuvastatin reduced by **ERYTHROMYCIN**; possible increased risk of myopathy when atorvastatin given with **ERYTHROMYCIN**; plasma concentration of pravastatin increased by **ERYTHROMYCIN**; plasma concentration of atorvastatin and simvastatin possibly reduced by **RIFAMPICIN**; metabolism of fluvastatin accelerated by **RIFAMPICIN** (reduced effect); increased risk of myopathy when statins given with ● **DAPTOMYCIN** (preferably avoid concomitant use); risk of myopathy and rhabdomyolysis when statins given with ● **FUSIDIC ACID**—avoid concomitant use and for 7 days after last fusidic acid dose; increased risk of myopathy when atorvastatin given with ● **TELITHROMYCIN** (avoid concomitant use); possible increased risk of myopathy when pravastatin given with **TELITHROMYCIN**
- Anticoagulants: atorvastatin may transiently reduce anticoagulant effect of **WARFARIN**; simvastatin can enhance the anticoagulant effect of **COUMARINS**; fluvastatin enhances anticoagulant effect of ● **COUMARINS**; rosuvastatin possibly enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- Antidepressants: plasma concentration of simvastatin reduced by **ST JOHN'S WORT**
- Antidiabetics: fluvastatin possibly increases plasma concentration of **GLIBENCLAMIDE**
- Antiepileptics: plasma concentration of simvastatin reduced by ● **CARBAMAZEPINE** and **ESLICARBAZEPINE**—consider increasing dose of simvastatin; plasma concentration of rosuvastatin reduced by **ESLICARBAZEPINE**; combination of fluvastatin with **FOSPHENYTOIN** or **PHENYTOIN** may increase plasma concentration of either drug (or both)
- Antifungals: possible increased risk of myopathy when atorvastatin given with ● **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use; increased risk of myopathy when simvastatin given with ● **ITRACONAZOLE**, ● **KETOCONAZOLE** or ● **POSACONAZOLE** (avoid concomitant use); possible increased risk of myopathy when simvastatin given with ● **FLUCONAZOLE** or ● **MICONAZOLE**; possible increased risk of myopathy when atorvastatin given with ● **FLUCONAZOLE** or **IMIDAZOLES**; plasma concentration of fluvastatin increased by **FLUCONAZOLE**—possible increased risk of myopathy; plasma concentration of atorvastatin increased by **ISAVUCONAZOLE**; plasma concentration of rosuvastatin increased by ● **ITRACONAZOLE**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when atorvastatin given with ● **ITRACONAZOLE**, ● **POSACONAZOLE** or ● **VORICONAZOLE**; increased risk of myopathy when simvastatin given with ● **VORICONAZOLE**
- Antivirals: possible increased risk of myopathy when atorvastatin or pravastatin given with ● **ATAZANAVIR**; plasma concentration of rosuvastatin increased by ● **ATAZANAVIR**, ● **DARUNAVIR**, ● **LOPINAVIR** and ● **TIPRANAVIR**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when simvastatin given with ● **ATAZANAVIR**, ● **INDINAVIR**, ● **RITONAVIR** or ● **SAQUINAVIR** (avoid concomitant use); plasma concentration of atorvastatin increased by **BOCEPREVIR** (reduce dose of atorvastatin); manufacturers advise avoid concomitant use of simvastatin with ● **BOCEPREVIR** and ● **TELAPREVIR**; plasma concentration of pravastatin increased by **BOCEPREVIR**; plasma concentration of rosuvastatin increased by **DACLATASVIR**; plasma concentration of pravastatin possibly increased by **DARUNAVIR** (use lowest possible dose of pravastatin); possible increased risk of myopathy when atorvastatin given with **DARUNAVIR**, **FOSAMPRENAVIR**, **INDINAVIR**, **LOPINAVIR** or **SAQUINAVIR**; avoidance of atorvastatin and simvastatin advised by

## Statins

- Antivirals (continued)
  - manufacturer of ● **DASABUVIR**; plasma concentration of rosuvastatin increased by ● **DASABUVIR** and ● **PARITAPREVIR** (reduce dose of rosuvastatin—see under Rosuvastatin, p. 193); plasma concentration of atorvastatin, pravastatin and simvastatin reduced by **EFAVIRENZ**; plasma concentration of atorvastatin possibly reduced by **ETRAVIRINE**; possible increased risk of myopathy when rosuvastatin given with ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **RITONAVIR** and ● **SAQUINAVIR**—manufacturer of rosuvastatin advises avoid concomitant use; possible increased risk of myopathy when simvastatin given with ● **FOSAMPRENAVIR** or ● **LOPINAVIR**—avoid concomitant use; avoidance of rosuvastatin advised by manufacturer of ● **LEDIPASVIR**; possible increased risk of myopathy when atorvastatin, fluvastatin and simvastatin given with ● **LEDIPASVIR**—manufacturer of ledipasvir advises consider reducing dose of atorvastatin, fluvastatin and simvastatin; avoidance of atorvastatin and simvastatin advised by manufacturer of ● **OMBITASVIR**; avoidance of atorvastatin, fluvastatin and simvastatin advised by manufacturer of ● **PARITAPREVIR**; plasma concentration of pravastatin increased by ● **PARITAPREVIR** (reduce dose of pravastatin); plasma concentration of atorvastatin possibly increased by **RITONAVIR** (use lowest possible dose of atorvastatin); plasma concentration of atorvastatin, rosuvastatin and simvastatin increased by **SIMEPREVIR** (consider reducing dose of atorvastatin, rosuvastatin and simvastatin); avoidance of atorvastatin advised by manufacturer of ● **TELAPREVIR**; plasma concentration of simvastatin possibly increased by ● **TIPRANAVIR**—avoid concomitant use; increased risk of myopathy when atorvastatin given with ● **TIPRANAVIR** (see under Atorvastatin, p. 191)
  - Anxiolytics and Hypnotics: atorvastatin increases plasma concentration of *intravenous* **MIDAZOLAM**
  - Bosentan: plasma concentration of simvastatin reduced by **BOSENTAN**
  - Calcium-channel Blockers: possible increased risk of myopathy when simvastatin given with ● **AMLODIPINE** and ● **DILTIAZEM** (see under Simvastatin, p. 194); plasma concentration of atorvastatin increased by **DILTIAZEM**—possible increased risk of myopathy; increased risk of myopathy when simvastatin given with ● **VERAPAMIL** (see under Simvastatin, p. 194); atorvastatin increases plasma concentration of ● **VERAPAMIL**, also possible increased risk of myopathy (consider reducing dose of atorvastatin)
  - Cardiac Glycosides: atorvastatin possibly increases plasma concentration of **DIGOXIN**
  - Ciclosporin: increased risk of myopathy when rosuvastatin or simvastatin given with ● **CICLOSPORIN** (avoid concomitant use); increased risk of myopathy when atorvastatin given with ● **CICLOSPORIN** (see under Atorvastatin, p. 191); increased risk of myopathy when fluvastatin or pravastatin given with ● **CICLOSPORIN**
  - Clopidogrel: plasma concentration of rosuvastatin increased by ● **CLOPIDOGREL**—adjust dose of rosuvastatin (consult product literature)
  - Cobicistat: plasma concentration of atorvastatin possibly increased by **COBICISTAT**—manufacturer of cobicistat advises reduce dose of atorvastatin; avoidance of simvastatin advised by manufacturer of ● **COBICISTAT**
  - Colchicine: possible increased risk of myopathy when statins given with ● **COLCHICINE**
  - Cytotoxics: plasma concentration of simvastatin possibly increased by **DASATINIB**; avoidance of simvastatin advised by manufacturer of **IDELALISIB**; plasma concentration of simvastatin increased by **IMATINIB**
  - Eltrombopag: plasma concentration of rosuvastatin increased by ● **ELTROMBOPAG**—adjust dose of rosuvastatin (consult product literature)
  - Grapefruit Juice: plasma concentration of atorvastatin possibly increased by **GRAPEFRUIT JUICE**; plasma concentration of simvastatin increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use

**Statins** (continued)

- **Hormone Antagonists:** possible increased risk of myopathy when simvastatin given with ● **DANAZOL**—avoid concomitant use
- **Lipid-regulating Drugs:** possible increased risk of myopathy when simvastatin given with ● **BEZAFIBRATE** (see under Simvastatin, p. 194); possible increased risk of myopathy when simvastatin given with ● **CIPROFIBRATE** (see under Simvastatin, p. 194); when given with statins reduce maximum dose of ● **FENOFIBRATE**—see under Fenofibrate, p. 188; increased risk of myopathy when atorvastatin, fluvastatin or pravastatin given with ● **GEMFIBROZIL** (preferably avoid concomitant use); increased risk of myopathy when simvastatin given with ● **GEMFIBROZIL** (avoid concomitant use); plasma concentration of rosuvastatin increased by ● **EZETIMIBE**—adjust dose of rosuvastatin (consult product literature); increased risk of myopathy when rosuvastatin given with ● **FIBRATES** (see under Rosuvastatin, p. 193); increased risk of myopathy when statins given with ● **FIBRATES**; plasma concentration of atorvastatin increased by ● **LOMITAPIDE**—manufacturer of lomitapide advises reduce dose of atorvastatin by half or separate administration by 12 hours; plasma concentration of simvastatin increased by ● **LOMITAPIDE** (see under Simvastatin, p. 194); increased risk of myopathy when statins given with ● **NICOTINIC ACID** (applies to lipid regulating doses of nicotinic acid)
- **Oestrogens:** atorvastatin and rosuvastatin increase plasma concentration of ● **ETHINYLESTRADIOL**
- **Progestogens:** atorvastatin increases plasma concentration of ● **NORETHISTERONE**; rosuvastatin increases plasma concentration of active metabolite of ● **NORGESTIMATE**; rosuvastatin increases plasma concentration of ● **NORGESTREL**
- **Ranolazine:** plasma concentration of simvastatin increased by ● **RANOLAZINE** (see under Simvastatin, p. 194)
- **Retinoids:** plasma concentration of simvastatin reduced by ● **ALITRETINOIN**
- **Sacubitril:** plasma concentration of atorvastatin increased by ● **SACUBITRIL**
- **Terflunomide:** plasma concentration of rosuvastatin increased by ● **TERIFLUNOMIDE** (consider reducing dose of rosuvastatin)
- **Ticagrelor:** plasma concentration of simvastatin increased by ● **TICAGRELOR** (increased risk of toxicity)

**Stavudine**

- **Antivirals:** increased risk of side-effects when stavudine given with ● **DIDANOSINE**; increased risk of toxicity when stavudine given with ● **RIBAVIRIN**; effects of stavudine possibly inhibited by ● **ZIDOVUDINE** (manufacturers advise avoid concomitant use)
- **Cytotoxics:** effects of stavudine possibly inhibited by ● **DOXORUBICIN**; increased risk of toxicity when stavudine given with ● **HYDROXYCARBAMIDE**—avoid concomitant use
- **Orlistat:** absorption of stavudine possibly reduced by ● **ORLISTAT**

**Stiripentol**

- **Antidepressants:** anticonvulsant effect of antiepileptics possibly antagonised by ● **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- **Antiepileptics:** stiripentol increases plasma concentration of ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE**
- **Antimalarials:** anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- **Antipsychotics:** anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- **Anxiolytics and Hypnotics:** stiripentol increases plasma concentration of ● **CLOBAZAM**
- **Orlistat:** possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

**Streptomycin** see Aminoglycosides**Strontium Ranelate**

- **Antibacterials:** strontium ranelate reduces absorption of ● **QUINOLONES** and ● **TETRACYCLINES** (manufacturer of strontium ranelate advises avoid concomitant use)

**Sucralfate**

- **Aminophylline:** sucralfate possibly reduces absorption of ● **AMINOPHYLLINE** (give at least 2 hours apart)
- **Antibacterials:** sucralfate reduces absorption of ● **CIPROFLOXACIN** (give at least 2 hours before or 4 hours after ciprofloxacin); sucralfate reduces absorption of ● **LEVOFLOXACIN**, ● **NORFLOXACIN** and ● **OFLOXACIN** (give at least 2 hours apart); sucralfate reduces absorption of ● **MOXIFLOXACIN** (give at least 6 hours apart); sucralfate reduces absorption of ● **TETRACYCLINES**
- **Anticoagulants:** sucralfate possibly reduces absorption of ● **COUMARINS** (reduced anticoagulant effect)
- **Antiepileptics:** sucralfate reduces absorption of ● **FOSPHENYTOIN** and ● **PHENYTOIN**
- **Antifungals:** sucralfate reduces absorption of ● **KETOCONAZOLE**
- **Antipsychotics:** sucralfate reduces absorption of ● **SULPIRIDE**
- **Cardiac Glycosides:** sucralfate possibly reduces absorption of ● **CARDIAC GLYCOSIDES**
- **Potassium Salts:** manufacturer of sucralfate advises avoid concomitant use with ● **POTASSIUM CITRATE**
- **Sodium Citrate:** manufacturer of sucralfate advises avoid concomitant use with ● **SODIUM CITRATE**
- **Theophylline:** sucralfate possibly reduces absorption of ● **THEOPHYLLINE** (give at least 2 hours apart)
- **Thyroid Hormones:** sucralfate reduces absorption of ● **LEVOTHYROXINE**
- **Ulcer-healing Drugs:** sucralfate possibly reduces absorption of ● **LANSOPRAZOLE**

**Sucroferri Oxhydroxide** see Iron Salts**Sugammadex**

- **Antibacterials:** response to sugammadex possibly reduced by ● **FUSIDIC ACID**
- **Progestogens:** sugammadex possibly reduces plasma concentration of ● **PROGESTONE**—manufacturer of sugammadex advises additional contraceptive precautions

**Sulfadiazine** see Sulfonamides**Sulfadoxine** see Sulfonamides**Sulfamethoxazole** see Sulfonamides**Sulfasalazine**

- **Cardiac Glycosides:** sulfasalazine possibly reduces absorption of ● **DIGOXIN**
- **Folates:** sulfasalazine possibly reduces absorption of ● **FOLIC ACID**
- **Sulfapyrazone**
  - **Aminophylline:** sulfapyrazone reduces plasma concentration of ● **AMINOPHYLLINE**
  - **Analgesics:** effects of sulfapyrazone antagonised by ● **ASPIRIN**
  - **Antibacterials:** sulfapyrazone reduces excretion of ● **NITROFURANTOIN** (increased risk of toxicity); sulfapyrazone reduces excretion of ● **PENICILLINS**; effects of sulfapyrazone antagonised by ● **PYRAZINAMIDE**
  - **Anticoagulants:** increased risk of bleeding when sulfapyrazone given with ● **APIXABAN**; sulfapyrazone enhances anticoagulant effect of ● **COUMARINS**; possible increased risk of bleeding when sulfapyrazone given with ● **DABIGATRAN**
  - **Antidiabetics:** sulfapyrazone enhances effects of ● **SULFONYLUREAS**
  - **Antiepileptics:** sulfapyrazone increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN**
  - **Calcium-channel Blockers:** sulfapyrazone reduces plasma concentration of ● **VERAPAMIL**
  - **Ciclosporin:** sulfapyrazone reduces plasma concentration of ● **CICLOSPORIN**
  - **Theophylline:** sulfapyrazone reduces plasma concentration of ● **THEOPHYLLINE**
- **Sulfonamides**
  - **Anaesthetics, General:** sulfonamides enhance effects of ● **THIOPENTAL**
  - **Anaesthetics, Local:** effects of sulfonamides possibly inhibited by ● **CHLOROPROCAINE** (manufacturer of chloroprocaine advises avoid concomitant use); increased risk of methaemoglobinemia when sulfonamides given with ● **PRILCAGINE**
  - **Anti-arrhythmics:** possible increased risk of ventricular arrhythmias when sulfamethoxazole (as co-trimoxazole) given with ● **AMIODARONE**—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole

**Sulfonamides** (continued)

- Antibacterials: increased risk of crystalluria when sulfonamides given with ● **METHENAMINE**
- Anticoagulants: sulfonamides enhance anticoagulant effect of ● **COUMARINS**; sulfonamides possibly inhibit metabolism of **PHENINDIONE**
- ▶ Antidiabetics: sulfonamides rarely enhance the effects of **SULFONYLUREAS**
- ▶ Antiepileptics: sulfonamides possibly increase plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Antimalarials: increased antifolate effect when sulfonamides given with ● **PYRIMETHAMINE**
- Antipsychotics: avoid concomitant use of sulfonamides with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Azathioprine: increased risk of haematological toxicity when sulfamethoxazole (as co-trimoxazole) given with ● **AZATHIOPRINE**
- Ciclosporin: increased risk of nephrotoxicity when sulfonamides given with ● **CICLOSPORIN**; sulfadiazine possibly reduces plasma concentration of ● **CICLOSPORIN**
- Cytotoxics: increased risk of haematological toxicity when sulfamethoxazole (as co-trimoxazole) given with ● **MERCAPTOPYRINE**; sulfonamides increase risk of **METHOTREXATE** toxicity; increased risk of severe bone marrow depression (fatalities reported) and other haematological toxicities when sulfamethoxazole (as co-trimoxazole) given with ● **METHOTREXATE**
- ▶ Potassium Aminobenzoate: effects of sulfonamides inhibited by **POTASSIUM AMINOENZOATE**
- Tacrolimus: possible increased risk of nephrotoxicity when sulfamethoxazole given with ● **TACROLIMUS**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Sulfonylureas** see Antidiabetics

**Sulindac** see NSAIDs

**Sulpiride** see Antipsychotics

**Sumatriptan** see 5HT<sub>1</sub>-receptor Agonists (under HT)

**Sunitinib**

- Antibacterials: metabolism of sunitinib accelerated by **RIFAMPICIN** (reduced plasma concentration)
- ▶ Antifungals: metabolism of sunitinib inhibited by **KETOCONAZOLE** (increased plasma concentration)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: avoidance of sunitinib advised by manufacturer of ● **BOCEPREVIR**

**Suxamethonium** see Muscle Relaxants

**Sympathomimetics**

- Adrenergic Neurone Blockers: ephedrine, isometheptene, metaraminol, methylphenidate, noradrenaline (norepinephrine), oxymetazoline, phenylephrine, pseudoephedrine and xylometazoline antagonise hypotensive effect of ● **ADRENERGIC NEURONE BLOCKERS**; manufacturer of midodrine advises avoid concomitant use with **GUANETHIDINE**; dexafetamine and lisdexafetamine antagonise hypotensive effect of ● **GUANETHIDINE**; increased risk of hypertension when adrenaline (epinephrine) given with ● **GUANETHIDINE**
- ▶ Alcohol: effects of methylphenidate possibly enhanced by **ALCOHOL**
- ▶ Alpha<sub>2</sub>-adrenoceptor Stimulants: avoidance of sympathomimetics advised by manufacturer of **APRALONIDINE**
- Alpha-blockers: effects of midodrine possibly antagonised by **ALPHA-BLOCKERS**; avoid concomitant use of adrenaline (epinephrine) or dopamine with ● **TOLAZOLINE**
- ▶ Aminophylline: avoidance of ephedrine in children advised by manufacturer of **AMINOPHYLLINE**
- Anaesthetics, General: avoidance of sympathomimetics advised by manufacturer of ● **ISOFLURANE** (risk of ventricular arrhythmias); increased risk of hypertension when methylphenidate given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS**; increased risk of arrhythmias when adrenaline (epinephrine) or noradrenaline (norepinephrine) given with ● **VOLATILE LIQUID GENERAL ANAESTHETICS**
- ▶ Antacids: absorption of pseudoephedrine possibly increased by **ALUMINIUM HYDROXIDE**
- Anticoagulants: methylphenidate possibly enhances anticoagulant effect of ● **COUMARINS**
- Antidepressants: risk of hypertensive crisis when dexafetamine, ephedrine, isometheptene, lisdexafetamine, metaraminol, methylphenidate, phenylephrine or pseudoephedrine given with ● **MAOIS**, avoid dexafetamine, ephedrine, isometheptene, lisdexafetamine, metaraminol, methylphenidate, phenylephrine or pseudoephedrine for at least 2 weeks after stopping MAOIs; manufacturer of midodrine advises avoid concomitant use with **MAOIS** and **TRICYCLICS**; risk of hypertensive crisis when adrenaline (epinephrine), dobutamine, dopamine, noradrenaline (norepinephrine) or xylometazoline given with ● **MAOIS**, some manufacturers advise avoid oxymetazoline for at least 2 weeks after stopping MAOIs; risk of hypertensive crisis when sympathomimetics given with ● **MOCLOBEMIDE**; methylphenidate possibly inhibits metabolism of **SSRIs** and **TRICYCLICS**; increased risk of hypertension and arrhythmias when noradrenaline (norepinephrine) or phenylephrine given with ● **TRICYCLICS**; increased risk of hypertension and arrhythmias when adrenaline (epinephrine) given with ● **TRICYCLICS** (but local anaesthetics with adrenaline appear to be safe)
- ▶ Antiepileptics: methylphenidate increases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; methylphenidate possibly increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE**
- ▶ Antihistamines: manufacturer of midodrine advises avoid concomitant use with **ANTIHISTAMINES**
- Antipsychotics: hypertensive effect of sympathomimetics antagonised by **ANTIPSYCHOTICS**; effects of lisdexafetamine possibly reduced by **CHLORPROMAZINE**; dexafetamine possibly antagonises antipsychotic effects of **CHLORPROMAZINE**; methylphenidate possibly increases side-effects of **RISPERIDONE**
- ▶ Antivirals: plasma concentration of dexafetamine possibly increased by **RITONAVIR**
- Beta-blockers: increased risk of severe hypertension and bradycardia when adrenaline (epinephrine) given with non-cardioselective ● **BETA-BLOCKERS**, also response to adrenaline (epinephrine) may be reduced; increased risk of severe hypertension and bradycardia when dobutamine given with non-cardioselective ● **BETA-BLOCKERS**; possible increased risk of severe hypertension and bradycardia when noradrenaline (norepinephrine) given with non-cardioselective ● **BETA-BLOCKERS**
- ▶ Cardiac Glycosides: manufacturer of midodrine advises avoid concomitant use with **DIGOXIN**
- Clonidine: possible risk of hypertension when adrenaline (epinephrine) or noradrenaline (norepinephrine) given with **CLONIDINE**; serious adverse events reported with concomitant use of methylphenidate and ● **CLONIDINE** (causality not established)
- ▶ Corticosteroids: possible risk of hypertension when midodrine given with **CORTICOSTEROIDS**; ephedrine accelerates metabolism of **DEXAMETHASONE**
- Dopaminergics: risk of toxicity when isometheptene given with ● **BROMOCRIPTINE**; effects of adrenaline (epinephrine), dobutamine, dopamine and noradrenaline (norepinephrine) possibly enhanced by **ENTACAPONE**; avoid concomitant use of sympathomimetics with ● **RASAGILINE**; risk of hypertensive crisis when dopamine given with ● **SELEGILINE**; avoidance of sympathomimetics advised by manufacturer of **SELEGILINE**
- ▶ Doxapram: increased risk of hypertension when sympathomimetics given with **DOXAPRAM**
- ▶ Ergot Alkaloids: increased risk of ergotism when sympathomimetics given with **ERGOT ALKALOIDS**
- Oxytocin: risk of hypertension when vasoconstrictor sympathomimetics given with **OXYTOCIN** (due to enhanced vasopressor effect)
- Sympathomimetics: effects of adrenaline (epinephrine) possibly enhanced by ● **DOPEXAMINE**; dopexamine possibly enhances effects of ● **NORADRENALINE (NOREPINEPHRINE)**

**Sympathomimetics** (continued)

**Sympathomimetics** (continued)

- ▶ Theophylline: avoidance of ephedrine in children advised by manufacturer of **THEOPHYLLINE**
  - ▶ Thyroid Hormones: manufacturer of midodrine advises avoid concomitant use with **THYROID HORMONES**
  - ▶ Ulcer-healing Drugs: metabolism of dobutamine possibly inhibited by **CIMETIDINE**
- Sympathomimetics, Beta<sub>2</sub>**
- ▶ Aminophylline: increased risk of hypokalaemia when high doses of beta<sub>2</sub> sympathomimetics given with **AMINOPHYLLINE**
  - Antifungals: plasma concentration of olodaterol increased by **KETOCONAZOLE**; metabolism of salmeterol inhibited by ● **KETOCONAZOLE** (increased plasma concentration)
  - Antivirals: plasma concentration of salmeterol possibly increased by **ATAZANAVIR**—manufacturer of atazanavir advises avoid concomitant use; avoidance of salmeterol advised by manufacturer of **LOPINAVIR**, **RITONAVIR** and **TIPRANAVIR**; avoidance of salmeterol advised by manufacturer of ● **TELAPREVIR** (risk of ventricular arrhythmias)
  - ▶ Atomoxetine: increased risk of cardiovascular side-effects when *parenteral* salbutamol given with **ATOMOXETINE**
  - ▶ Cardiac Glycosides: salbutamol possibly reduces plasma concentration of **DIGOXIN**
  - ▶ Cobicistat: avoidance of salmeterol advised by manufacturer of **COBICISTAT**
  - ▶ Corticosteroids: increased risk of hypokalaemia when high doses of beta<sub>2</sub> sympathomimetics given with **CORTICOSTEROIDS**
  - ▶ Cytotoxics: avoidance of salmeterol advised by manufacturer of **IDELALISIB**
  - ▶ Diuretics: increased risk of hypokalaemia when high doses of beta<sub>2</sub> sympathomimetics given with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
  - Methyldopa: acute hypotension reported when *infusion* of salbutamol given with ● **METHYLDOPA**
  - ▶ Muscle Relaxants: bambuterol enhances effects of **SUXAMETHONIUM**
  - ▶ Theophylline: increased risk of hypokalaemia when high doses of beta<sub>2</sub> sympathomimetics given with **THEOPHYLLINE**

**Tacrolimus**

- NOTE** Interactions do not generally apply to tacrolimus used topically; risk of facial flushing and skin irritation with topical tacrolimus on consumption of alcohol
- Analgesics: possible increased risk of nephrotoxicity when tacrolimus given with **NSAIDs**; increased risk of nephrotoxicity when tacrolimus given with ● **IBUPROFEN**
  - ▶ Angiotensin-II Receptor Antagonists: increased risk of hyperkalaemia when tacrolimus given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - ▶ Anti-arrhythmics: plasma concentration of tacrolimus possibly increased by **AMIODARONE**; caution with tacrolimus advised by manufacturer of **DRONEDARONE**
  - Antibacterials: plasma concentration of tacrolimus increased by ● **CLARITHROMYCIN** and ● **ERYTHROMYCIN**; plasma concentration of tacrolimus possibly reduced by **RIFABUTIN**; plasma concentration of tacrolimus reduced by ● **RIFAMPICIN**; possible increased risk of nephrotoxicity when tacrolimus given with ● **SULFAMETHOXAZOLE**, ● **TRIMETHOPRIM** or **VANCOMYCIN**; increased risk of nephrotoxicity when tacrolimus given with ● **AMINOGLYCOSIDES**; plasma concentration of tacrolimus possibly increased by ● **CHLORAMPHENICOL** and ● **TELITHROMYCIN**
  - Anticoagulants: tacrolimus possibly increases plasma concentration of ● **DABIGATRAN**—manufacturer of dabigatran advises avoid concomitant use
  - Antidepressants: plasma concentration of tacrolimus reduced by ● **ST JOHN'S WORT**—avoid concomitant use
  - Antiepileptics: plasma concentration of tacrolimus reduced by **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of fosphenytoin and phenytoin possibly increased; plasma concentration of tacrolimus reduced by ● **PHENOBARBITAL** and ● **PRIMIDONE**
  - Antifungals: plasma concentration of tacrolimus increased by ● **FLUCONAZOLE**, ● **ITRACONAZOLE**, ● **KETOCONAZOLE**, ● **POSACONAZOLE** and ● **VORICONAZOLE** (consider reducing dose of tacrolimus); plasma concentration of tacrolimus possibly increased by ● **MICONAZOLE oral gel**; increased risk of

**Tacrolimus**

- Antifungals (continued) nephrotoxicity when tacrolimus given with ● **AMPHOTERICIN**; plasma concentration of tacrolimus increased by **ISAVUCONAZOLE**; plasma concentration of tacrolimus reduced by ● **CASPOFUNGIN**
  - Antipsychotics: avoidance of tacrolimus advised by manufacturer of ● **DROPERIDOL** (risk of ventricular arrhythmias)
  - Antivirals: possible increased risk of nephrotoxicity when tacrolimus given with **ACICLOVIR**, **GANCICLOVIR**, **VALACICLOVIR** or **VALGANCICLOVIR**; plasma concentration of tacrolimus possibly increased by ● **ATAZANAVIR** and ● **RITONAVIR**; plasma concentration of tacrolimus increased by ● **BOCEPREVIR** (reduce dose of tacrolimus); plasma concentration of tacrolimus possibly affected by ● **EFAVIRENZ**; plasma concentration of tacrolimus increased by ● **FOSAMPRENAVIR**; plasma concentration of tacrolimus increased by ● **SAQUINAVIR** (consider reducing dose of tacrolimus); plasma concentration of both drugs increased when tacrolimus given with ● **TELAPREVIR** (reduce dose of tacrolimus)
  - Calcium-channel Blockers: plasma concentration of tacrolimus possibly increased by **FELODIPINE** and **VERAPAMIL**; plasma concentration of tacrolimus increased by ● **DILTIAZEM**, **NICARDIPINE** and ● **NIFEDIPINE**
  - Ciclosporin: tacrolimus increases plasma concentration of ● **CICLOSPORIN** (increased risk of nephrotoxicity)—avoid concomitant use
  - Cytotoxics: tacrolimus possibly increases the plasma concentration of **AFATINIB**—manufacturer of afatinib advises separating administration of tacrolimus by 6 to 12 hours; avoidance of tacrolimus advised by manufacturer of **CERITINIB**; caution with tacrolimus advised by manufacturer of ● **CRIZOTINIB**; plasma concentration of tacrolimus increased by **IMATINIB**
  - ▶ Dexamazoxane: increased risk of immunosuppression with tacrolimus advised by manufacturer of **DEXAZOXANE**
  - Diuretics: increased risk of hyperkalaemia when tacrolimus given with ● **ALDOSTERONE ANTAGONISTS** or ● **POTASSIUM-SPARING DIURETICS**
  - Grapefruit Juice: plasma concentration of tacrolimus increased by ● **GRAPEFRUIT JUICE**
  - ▶ Hormone Antagonists: plasma concentration of tacrolimus possibly increased by **DANAZOL**
  - ▶ Lipid-regulating Drugs: separating administration from tacrolimus by 12 hours advised by manufacturer of **LOMITAPIDE**
  - ▶ Lumacaftor: avoidance of tacrolimus advised by manufacturer of **LUMACAFTOR**
  - ▶ Mifamurtide: avoidance of tacrolimus advised by manufacturer of **MIFAMURTIDE**
  - ▶ Oestrogens: plasma concentration of tacrolimus possibly increased by **ETHINYLESTRADIOL**
  - Potassium Salts: increased risk of hyperkalaemia when tacrolimus given with ● **POTASSIUM SALTS**
  - Ranolazine: plasma concentration of tacrolimus increased by ● **RANOLAZINE**
  - ▶ Sevelamer: plasma concentration of tacrolimus possibly reduced by **SEVELAMER**
  - ▶ Ulcer-healing Drugs: plasma concentration of tacrolimus possibly increased by **OMEPRAZOLE**
- Tadalafil**
- Alpha-blockers: enhanced hypotensive effect when tadalafil given with ● **DOXAZOSIN**—manufacturer of tadalafil advises avoid concomitant use; enhanced hypotensive effect when tadalafil given with ● **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate tadalafil at the lowest possible dose
  - ▶ Anti-arrhythmics: avoidance of tadalafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias)
  - Antibacterials: plasma concentration of tadalafil possibly increased by **CLARITHROMYCIN** and **ERYTHROMYCIN**; plasma concentration of tadalafil reduced by ● **RIFAMPICIN**—manufacturer of tadalafil advises avoid concomitant use
  - Antifungals: tadalafil concentration is increased by ● **KETOCONAZOLE**—avoid concomitant use of tadalafil for

**Tadalafil**

- Antifungals (continued)
  - pulmonary hypertension; plasma concentration of tadalafil possibly increased by **ITRACONAZOLE**
- Antivirals: plasma concentration of tadalafil possibly increased by **FOSAMPRENAVIR** and **INDINAVIR**; plasma concentration of tadalafil increased by **RITONAVIR**—avoid concomitant use of tadalafil for pulmonary hypertension; increased risk of ventricular arrhythmias when tadalafil given with
  - **SAQUINAVIR**—avoid concomitant use; avoidance of high doses of tadalafil advised by manufacturer of **TELAPREVIR**—consult product literature
- ▶ Bosentan: plasma concentration of tadalafil reduced by **BOSENTAN**
- Cobicistat: plasma concentration of tadalafil possibly increased by **COBICISTAT**—manufacturer of cobicistat advises reduce dose of tadalafil (consult cobicistat product literature)
- ▶ Dapoxetine: avoidance of tadalafil advised by manufacturer of **DAPOXETINE**
- ▶ Grapefruit Juice: plasma concentration of tadalafil possibly increased by **GRAPEFRUIT JUICE**
- Nicorandil: tadalafil significantly enhances hypotensive effect of **NICORANDIL** (avoid concomitant use)
- Nitrates: tadalafil significantly enhances hypotensive effect of **NITRATES** (avoid concomitant use)
- Riociguat: possible enhanced hypotensive effect when tadalafil given with **RIOCIGUAT**—avoid concomitant use

**Tamoxifen**

- Antibacterials: metabolism of tamoxifen accelerated by **RIFAMPICIN** (reduced plasma concentration)
- Anticoagulants: tamoxifen enhances anticoagulant effect of
  - **COUMARINS**
- Antidepressants: metabolism of tamoxifen to active metabolite possibly inhibited by **FLUOXETINE** and **PAROXETINE** (avoid concomitant use)
- Antipsychotics: avoidance of tamoxifen advised by manufacturer of **DROPERIDOL** (risk of ventricular arrhythmias)
- Bupropion: metabolism of tamoxifen to active metabolite possibly inhibited by **BUPROPION** (avoid concomitant use)
- Cinacalcet: metabolism of tamoxifen to active metabolite possibly inhibited by **CINACALCET** (avoid concomitant use)

**Tamsulosin** see Alpha-blockers

**Tapentadol** see Opioid Analgesics

**Taxanes** see Cabazitaxel, Docetaxel, and Paclitaxel

**Tedizolid** see MAOIs

**Tegafur**

- ▶ Antibacterials: metabolism of tegafur inhibited by **METRONIDAZOLE** (increased toxicity)
- Anticoagulants: tegafur enhances anticoagulant effect of
  - **COUMARINS**
- ▶ Antiepileptics: tegafur possibly inhibits metabolism of **FOSPHENYTOIN** and **PHENYTOIN** (increased risk of toxicity)
- Antipsychotics: avoid concomitant use of cytotoxics with
  - **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Filgrastim: neutropenia possibly exacerbated when tegafur given with **FILGRASTIM**
- Folate: toxicity of tegafur increased by **FOLIC ACID**—avoid concomitant use
- ▶ Lipegfilgrastim: neutropenia possibly exacerbated when tegafur given with **LIPEGFILGRASTIM**
- ▶ Pegfilgrastim: neutropenia possibly exacerbated when tegafur given with **PEGFILGRASTIM**
- ▶ Ulcer-healing Drugs: metabolism of tegafur inhibited by **CIMETIDINE** (increased plasma concentration)

**Teicoplanin**

- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Telaprevir**

- Alpha-blockers: manufacturer of telaprevir advises avoid concomitant use with **ALFUZOSIN**
- Analgesics: manufacturer of telaprevir advises caution with
  - **METHADONE** (risk of ventricular arrhythmias)
- Anti-arrhythmics: manufacturer of telaprevir advises avoid concomitant use with **AMIODARONE** and **DISOPYRAMIDE** (risk of ventricular arrhythmias); manufacturer of telaprevir

**Telaprevir**

- Anti-arrhythmics (continued)
  - advises caution with **● FLECAINIDE** and **● PROPafenone** (risk of ventricular arrhythmias); manufacturer of telaprevir advises caution with *intravenous* **LIDOCAINE**
- Antibacterials: plasma concentration of both drugs possibly increased when telaprevir given with **● CLARITHROMYCIN**, **● ERYTHROMYCIN** and **● TELITHROMYCIN** (increased risk of ventricular arrhythmias); manufacturer of telaprevir advises avoid concomitant use with **● RIFABUTIN**; plasma concentration of telaprevir significantly reduced by
  - **RIFAMPICIN**—avoid concomitant use
- Anticoagulants: telaprevir possibly affects plasma concentration of **● WARFARIN**; avoidance of telaprevir advised by manufacturer of **APIXABAN**; telaprevir possibly increases plasma concentration of **DABIGATRAN**
- Antidepressants: telaprevir possibly increases plasma concentration of **TRAZODONE**; manufacturer of telaprevir advises avoid concomitant use with **● ST JOHN'S WORT**
- ▶ Antidiabetics: telaprevir increases plasma concentration of **METFORMIN** (consider reducing dose of metformin)
- Antiepileptics: manufacturer of telaprevir advises avoid concomitant use with **● CARBAMAZEPINE**, **● FOSPHENYTOIN**, **● PHENOBARBITAL**, **● PHENYTOIN** and **● PRIMIDONE**
- Antifungals: plasma concentration of both drugs possibly increased when telaprevir given with **KETOCONAZOLE** (increased risk of ventricular arrhythmias)—reduce dose of ketoconazole; telaprevir possibly increases plasma concentration of **● ITRACONAZOLE**; telaprevir possibly increases plasma concentration of **● POSACONAZOLE** (increased risk of ventricular arrhythmias); telaprevir possibly affects plasma concentration of **● VORICONAZOLE** (possible increased risk of ventricular arrhythmias)
- Antipsychotics: telaprevir possibly increases plasma concentration of **● LURASIDONE**—avoid concomitant use; manufacturer of telaprevir advises avoid concomitant use with **● PIMOZIDE**; telaprevir possibly increases plasma concentration of **● QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: plasma concentration of telaprevir possibly reduced by **ATAZANAVIR**, also plasma concentration of atazanavir possibly increased; telaprevir increases the plasma concentration of **● DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, p. 577); avoid concomitant use of telaprevir with **● DARUNAVIR**; plasma concentration of telaprevir reduced by **● EFAVIRENZ**—increase dose of telaprevir; manufacturers advise avoid concomitant use of telaprevir with **● FOSAMPRENAVIR** and **● LOPINAVIR**; telaprevir increases plasma concentration of **MARAVIROC** (consider reducing dose of maraviroc); plasma concentration of telaprevir possibly reduced by **NEVIRAPINE**—consider increasing dose of telaprevir; plasma concentration of telaprevir possibly reduced by **RITONAVIR**; telaprevir increases plasma concentration of **TENOFOVIR**; avoidance of telaprevir advised by manufacturer of **TIPRANAVIR**
- Anxiolytics and Hypnotics: telaprevir possibly increases plasma concentration of **● MIDAZOLAM** (risk of prolonged sedation—avoid concomitant use of *oral* midazolam)
- Beta-blockers: manufacturer of telaprevir advises avoid concomitant use with **● SOTALOL** (risk of ventricular arrhythmias)
- ▶ Bosentan: plasma concentration of telaprevir possibly reduced by **BOSENTAN**, also plasma concentration of bosentan possibly increased
- ▶ Calcium-channel Blockers: telaprevir increases plasma concentration of **● AMLODIPINE** (consider reducing dose of amlodipine); manufacturer of telaprevir advises caution with **DILTIAZEM**, **FELODIPINE**, **NICARDIPINE**, **NIFEDIPINE** and **VERAPAMIL**
- ▶ Cardiac Glycosides: telaprevir increases plasma concentration of **DIGOXIN**
- Ciclosporin: plasma concentration of both drugs increased when telaprevir given with **● CICLOSPORIN** (reduce dose of ciclosporin)
- Clotazol: telaprevir possibly increases plasma concentration of **● CILOSTAZOL** (see under Clotazol, p. 221)

**Telaprevir** (continued)

- Colchicine: telaprevir possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
  - ▶ Corticosteroids: telaprevir possibly increases plasma concentration of *inhaled* and *intranasal* ● **BUDESONIDE** and ● **FLUTICASONE**; plasma concentration of telaprevir possibly reduced by ● **DEXAMETHASONE**
  - Cytotoxics: telaprevir possibly increases the plasma concentration of ● **BOSUTINIB**—manufacturer of bosutinib advises avoid or consider reducing dose of bosutinib; manufacturer of ruxolitinib advises dose reduction when telaprevir given with ● **RUXOLITINIB**—consult ruxolitinib product literature; telaprevir possibly increases plasma concentration of ● **OLAPARIB** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
  - Domperidone: possible increased risk of ventricular arrhythmias when telaprevir given with ● **DOMPERIDONE**—avoid concomitant use
  - Ergot Alkaloids: manufacturer of telaprevir advises avoid concomitant use with ● **ERGOT ALKALOIDS**
  - Guanfacine: telaprevir possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
  - Lipid-regulating Drugs: manufacturer of telaprevir advises avoid concomitant use with ● **ATORVASTATIN**; manufacturers advise avoid concomitant use of telaprevir with ● **SIMVASTATIN**; avoidance of telaprevir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
  - Oestrogens: telaprevir possibly reduces plasma concentration of ● **ETHINYLESTRADIOL**—manufacturer of telaprevir advises additional contraceptive precautions
  - Sildenafil: manufacturer of telaprevir advises avoid concomitant use with ● **SILDENAFIL**
  - Sirolimus: plasma concentration of both drugs increased when telaprevir given with ● **SIROLIMUS** (reduce dose of sirolimus)
  - Sympathomimetics, Beta<sub>2</sub>: manufacturer of telaprevir advises avoid concomitant use with ● **SALMETEROL** (risk of ventricular arrhythmias)
  - Tacrolimus: plasma concentration of both drugs increased when telaprevir given with ● **TACROLIMUS** (reduce dose of tacrolimus)
  - Tadalafil: manufacturer of telaprevir advises avoid concomitant use with high doses of ● **TADALAFIL**—consult product literature
  - Vardenafil: manufacturer of telaprevir advises avoid concomitant use with ● **VARDENAFIL**
- Telavancin**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Telivudine**

- Interferons: increased risk of peripheral neuropathy when telivudine given with ● **INTERFERON ALFA** and ● **PEGINTERFERON ALFA**

**Telithromycin**

- Analgesics: possible increased risk of ventricular arrhythmias when telithromycin given with ● **METHADONE**; telithromycin inhibits the metabolism of ● **OXYCODONE**
- Anti-arrhythmics: possible increased risk of ventricular arrhythmias when telithromycin given with ● **AMIODARONE** and ● **DISOPYRAMIDE**; increased risk of ventricular arrhythmias when telithromycin given with ● **DRONEDARONE**—avoid concomitant use
- Antibacterials: possible increased risk of ventricular arrhythmias when telithromycin given with ● **MOXIFLOXACIN**; plasma concentration of telithromycin reduced by ● **RIFAMPICIN** (avoid during and for 2 weeks after rifampicin)
- ▶ Anticoagulants: avoidance of telithromycin advised by manufacturer of ● **APIXABAN**
- Antidepressants: possible increased risk of ventricular arrhythmias when telithromycin given with ● **CITALOPRAM** and ● **TRICYCLICS**; plasma concentration of telithromycin reduced by ● **ST JOHN'S WORT** (avoid during and for 2 weeks after St John's wort)
- Antiepileptics: plasma concentration of telithromycin reduced by ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**,

**Telithromycin**

- Antiepileptics (continued)
  - ● **PHENYTOIN** and ● **PRIMIDONE** (avoid during and for 2 weeks after carbamazepine, fosphenytoin, phenobarbital, phenytoin and primidone)
- Antifungals: plasma concentration of telithromycin increased by ● **KETOCONAZOLE**—avoid in severe renal and hepatic impairment
- ▶ Antimuscarinics: manufacturer of fesoterodine advises dose reduction when telithromycin given with ● **FESOTERODINE**—consult fesoterodine product literature
- Antipsychotics: possible increased risk of ventricular arrhythmias when telithromycin given with ● **CHLORPROMAZINE**; telithromycin possibly increases plasma concentration of ● **LURASIDONE**—avoid concomitant use; increased risk of ventricular arrhythmias when telithromycin given with ● **PIMOZIDE**—avoid concomitant use; telithromycin possibly increases plasma concentration of ● **QUETIAPINE**
- Antivirals: manufacturer of telithromycin advises avoid concomitant use with ● **ATAZANAVIR**, ● **FOSAMPRENAVIR**, ● **INDINAVIR**, ● **LOPINAVIR**, ● **RITONAVIR** and ● **TRIPANAVIR** in severe renal and hepatic impairment; telithromycin possibly increases the plasma concentration of ● **DACLATASVIR**—reduce dose of daclatasvir (see under Daclatasvir, p. 577); avoidance of telithromycin advised by manufacturer of ● **DASABUVIR** and ● **PARITAPREVIR**; telithromycin possibly increases plasma concentration of ● **MARAVIROC** (consider reducing dose of maraviroc); manufacturer of telithromycin advises avoid concomitant use with ● **SAQUINAVIR** (risk of ventricular arrhythmias); telithromycin possibly increases plasma concentration of ● **SIMEPREVIR**—manufacturer of simeprevir advises avoid concomitant use; plasma concentration of both drugs possibly increased when telithromycin given with ● **TELAPEVIR** (increased risk of ventricular arrhythmias)
- Anxiolytics and Hypnotics: telithromycin inhibits metabolism of ● **MIDAZOLAM** (increased plasma concentration with increased sedation)
- ▶ Aprepitant: telithromycin possibly increases plasma concentration of ● **APREPITANT**
- Avafafil: telithromycin possibly increases plasma concentration of ● **AVANAFIL**—manufacturer of avafafil advises avoid concomitant use
- Calcium-channel Blockers: telithromycin possibly inhibits metabolism of ● **CALCIUM-CHANNEL BLOCKERS** (increased risk of side-effects)
- ▶ Cardiac Glycosides: telithromycin possibly increases plasma concentration of ● **DIGOXIN**
- Ciclosporin: telithromycin possibly increases plasma concentration of ● **CICLOSPORIN**
- Colchicine: telithromycin possibly increases risk of ● **COLCHICINE** toxicity—suspend or reduce dose of colchicine (avoid concomitant use in hepatic or renal impairment)
- Cytotoxics: telithromycin possibly increases plasma concentration of ● **AXITINIB** (reduce dose of axitinib—consult axitinib product literature); telithromycin possibly increases the plasma concentration of ● **BOSUTINIB** and ● **CABAZITAXEL**—manufacturer of bosutinib and cabazitaxel advises avoid or consider reducing dose of bosutinib and cabazitaxel; telithromycin possibly increases plasma concentration of ● **CERITINIB**—avoid concomitant use or consider reducing the dose of ceritinib (see under Ceritinib, p. 861); telithromycin possibly increases plasma concentration of ● **CRIZOTINIB** and ● **EVEROLIMUS**—manufacturer of crizotinib and everolimus advises avoid concomitant use; avoidance of telithromycin advised by manufacturer of ● **DASATINIB** (plasma concentration of dasatinib possibly increased); telithromycin possibly increases the plasma concentration of ● **IBRUTINIB**—reduce dose of ibrutinib (see under Ibrutinib, p. 867); avoidance of telithromycin advised by manufacturer of ● **LAPATINIB** and ● **NILOTINIB**; telithromycin possibly increases plasma concentration of ● **PAZOPANIB** (reduce dose of pazopanib); telithromycin possibly increases plasma concentration of ● **PONATINIB**—consider reducing initial dose of ponatinib (see under Ponatinib, p. 873); manufacturer of ruxolitinib advises dose reduction when telithromycin given with ● **RUXOLITINIB**—consult ruxolitinib product literature; telithromycin possibly

**Telithromycin**

- Cytotoxics (continued)
  - increases plasma concentration of ● **DOCETAXEL**—manufacturer of docetaxel advises avoid concomitant use or consider reducing docetaxel dose; telithromycin possibly increases plasma concentration of ● **OLAPARIB** (avoid concomitant use or reduce dose of olaparib—see under Olaparib, p. 881)
- Dapoxetine: avoidance of telithromycin advised by manufacturer of ● **DAPOXETINE** (increased risk of toxicity)
- Diuretics: telithromycin increases plasma concentration of ● **EPLERENONE**—avoid concomitant use
- Dermidome: possible increased risk of ventricular arrhythmias when telithromycin given with ● **DOMPERIDONE**—avoid concomitant use
- Ergot Alkaloids: increased risk of ergotism when telithromycin given with ● **ERGOT ALKALOIDS**—avoid concomitant use
  - Fosaprepitant: telithromycin possibly increases plasma concentration of **FOSAPREPITANT**
- Guanfacine: telithromycin possibly increases plasma concentration of ● **GUANFACINE** (halve dose of guanfacine)
- Ivabradine: telithromycin possibly increases plasma concentration of ● **IVABRADINE**—avoid concomitant use
- Ivacaftor: telithromycin possibly increases plasma concentration of ● **IVACAFTOR**—reduce dose of ivacaftor (see under Ivacaftor in BNF or BNFC, and Lumacaftor with Ivacaftor in BNF or BNFC)
- Lipid-regulating Drugs: increased risk of myopathy when telithromycin given with ● **ATORVASTATIN** or ● **SIMVASTATIN** (avoid concomitant use); possible increased risk of myopathy when telithromycin given with **PRAVASTATIN**; avoidance of telithromycin advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Lumacaftor: plasma concentration of telithromycin possibly reduced by ● **LUMACAFTOR**—reduce dose of lumacaftor with ivacaftor (see under Lumacaftor with Ivacaftor in BNF or BNFC)
- Naloxegol: telithromycin possibly increases plasma concentration of ● **NALOXEGOL**—avoid concomitant use
- Panobinostat: telithromycin possibly increases plasma concentration of ● **PANOBINOSTAT** (reduce dose of panobinostat—see under Panobinostat, p. 834)
- Pentamidine Isetionate: possible increased risk of ventricular arrhythmias when telithromycin given with *parenteral* ● **PENTAMIDINE ISETIONATE**
- Ranolazine: telithromycin possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- Sildenafil: telithromycin possibly increases plasma concentration of ● **SILDENAFIL**—consider reducing initial dose of sildenafil for erectile dysfunction or reduce sildenafil dose frequency to once daily for pulmonary hypertension
- Sirolimus: telithromycin increases plasma concentration of ● **SIROLIMUS**—avoid concomitant use
- Tacrolimus: telithromycin possibly increases plasma concentration of ● **TACROLIMUS**
  - Ulipristal: avoidance of telithromycin advised by manufacturer of *low-dose* **ULIPRISTAL**
  - Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Telmisartan** see Angiotensin-II Receptor Antagonists

**Temazepam** see Anxiolytics and Hypnotics

**Temocillin** see Penicillins

**Temporfin**

- Cytotoxics: increased skin photosensitivity when temporfin given with *topical* ● **FLUOROURACIL**

**Temozolomide**

- Antiepileptics: plasma concentration of temozolomide increased by **SODIUM VALPROATE** and **VALPROIC ACID**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

**Temsirolimus**

**NOTE** The main active metabolite of temsirolimus is sirolimus—see also interactions of sirolimus and consult product literature

**Temsirolimus** (continued)

- Antibacterials: plasma concentration of active metabolite of temsirolimus reduced by ● **RIFAMPICIN**—avoid concomitant use
- Antifungals: plasma concentration of active metabolite of temsirolimus increased by ● **KETOCONAZOLE**—avoid concomitant use; manufacturer of temsirolimus advises avoid concomitant use with ● **ITRACONAZOLE** (plasma concentration of temsirolimus possibly increased)
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)

**Tenofovir**

- Antivirals: manufacturer of tenofovir advises avoid concomitant use with **ADEFOVIR**; tenofovir reduces plasma concentration of **ATAZANAVIR**, also plasma concentration of tenofovir possibly increased; tenofovir increases plasma concentration of ● **DIDANOSINE** (increased risk of toxicity)—avoid concomitant use; plasma concentration of tenofovir increased by **LOPINAVIR** and **TELAPREVIR**
- Orlistat: absorption of tenofovir possibly reduced by ● **ORLISTAT**

**Tenoxicam** see NSAIDs

**Terazosin** see Alpha-blockers

**Terbinafine**

- Antibacterials: plasma concentration of terbinafine reduced by ● **RIFAMPICIN**
  - Antidepressants: terbinafine possibly increases plasma concentration of **PAROXETINE** and **TRICYCLICS**
  - Antifungals: terbinafine increases plasma concentration of **FLUCONAZOLE**
  - Ciclosporin: terbinafine possibly reduces plasma concentration of **CICLOSPORIN**
  - Oestrogens: occasional reports of breakthrough bleeding when terbinafine given with **OESTROGENS** (when used for contraception)
  - Progestogens: occasional reports of breakthrough bleeding when terbinafine given with **PROGESTOGENS** (when used for contraception)
  - Ulcer-healing Drugs: plasma concentration of terbinafine increased by **CIMETIDINE**

**Terbutaline** see Sympathomimetics, Beta<sub>2</sub>

**Teriflunomide**

- Antibacterials: teriflunomide increases plasma concentration of **CEFAZOLIN**; plasma concentration of teriflunomide reduced by **RIFAMPICIN**
- Antidiabetics: teriflunomide increases plasma concentration of **REPAGLINIDE**
- Lipid-regulating Drugs: the effect of teriflunomide is significantly decreased by **COLESTYRAMINE** (enhanced elimination)—avoid unless drug elimination desired; teriflunomide increases plasma concentration of ● **ROSUVASTATIN** (consider reducing dose of rosuvastatin)
- Oestrogens: teriflunomide increases plasma concentration of **ETHINYLESTRADIOL**
  - Progestogens: teriflunomide increases plasma concentration of **LEVONORGESTREL**
- Vaccines: risk of generalised infections when teriflunomide given with live ● **VACCINES**—avoid concomitant use

**Testolactone**

- Anticoagulants: testolactone enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**

**Testosterone**

- Anticoagulants: testosterone enhances anticoagulant effect of ● **COUMARINS** and ● **PHENINDIONE**
- Antidiabetics: testosterone possibly enhances hypoglycaemic effect of **ANTIIDIABETICS**

**Tetrabenazine**

- Antidepressants: risk of CNS toxicity when tetrabenazine given with ● **MAOIS** (avoid tetrabenazine for 2 weeks after MAOIs)
- Antipsychotics: increased risk of extrapyramidal side-effects when tetrabenazine given with **ANTIPSYCHOTICS**
- Dopaminergics: increased risk of extrapyramidal side-effects when tetrabenazine given with **AMANTADINE**
- Metoclopramide: increased risk of extrapyramidal side-effects when tetrabenazine given with **METOCLOPRAMIDE**

**Tetracosactide** see Corticosteroids

**Tetracycline** see Tetracyclines

**Tetracyclines**

- ACE Inhibitors: absorption of tetracyclines reduced by **QUINAPRIL** tablets (quinapril tablets contain magnesium carbonate)
- Adsorbents: absorption of tetracyclines possibly reduced by **KAOLIN**
- Antacids: absorption of tetracyclines possibly reduced by **ANTACIDS** (give at least 2 to 3 hours apart)
- Antibacterials: plasma concentration of doxycycline reduced by **RIFAMPICIN**—consider increasing dose of doxycycline; tetracyclines possibly antagonise effects of **PENICILLINS**
- Anticoagulants: tetracyclines possibly enhance anticoagulant effect of **COUMARINS** and **PHENINDIONE**
- Antidiabetics: tetracyclines possibly enhance hypoglycaemic effect of **SULFONYLUREAS**
- Antiepileptics: metabolism of doxycycline accelerated by **CARBAMAZEPINE** (reduced effect); metabolism of doxycycline accelerated by **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE** (reduced plasma concentration)
- Atovaquone: tetracycline reduces plasma concentration of **ATOVAQUONE**
- Calcium Salts: absorption of tetracyclines possibly reduced by **CALCIUM SALTS** (give at least 2 to 3 hours apart)
- Cytotoxics: doxycycline or tetracycline increase risk of **METHOTREXATE** toxicity
- Dairy Products: absorption of tetracyclines (except doxycycline and minocycline) reduced by **DAIRY PRODUCTS**
- Diuretics: manufacturer of lymecycline advises avoid concomitant use with **DIURETICS**
- Ergot Alkaloids: increased risk of ergotism when tetracyclines given with **ERGOTAMINE**
- Iron Salts: absorption of tetracyclines reduced by *oral* **IRON SALTS**, also absorption of *oral* iron salts reduced by tetracyclines (give at least 2 to 3 hours apart)
- Lipid-regulating Drugs: absorption of tetracycline possibly reduced by **COLESTIPOL** and **COLESTYRAMINE**
- Retinoids: possible increased risk of benign intracranial hypertension when tetracyclines given with **RETINOIDS** (avoid concomitant use)
- Strontium Ranelate: absorption of tetracyclines reduced by **STRONTIUM RANELATE** (manufacturer of strontium ranelate advises avoid concomitant use)
- Ulcer-healing Drugs: absorption of tetracyclines reduced by **SUCRALFATE** and **TRIPOTASSIUM DICITRATOBISMUTHATE**
- Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC
- Zinc: absorption of tetracyclines possibly reduced by **ZINC** (give at least 2 to 3 hours apart)

**Theophylline**

- Allopurinol: plasma concentration of theophylline possibly increased by **ALLOPURINOL**
- Anaesthetics, General: increased risk of convulsions when theophylline given with **KETAMINE**
- Anti-arrhythmics: theophylline antagonises anti-arrhythmic effect of **ADENOSINE**—manufacturer of adenosine advises avoid theophylline for 24 hours before adenosine; plasma concentration of theophylline increased by **PROPAFENONE**
- Antibacterials: plasma concentration of theophylline possibly increased by **CLARITHROMYCIN** and **ISONIAZID**; plasma concentration of theophylline increased by **ERYTHROMYCIN** (also theophylline may reduce absorption of *oral* erythromycin); plasma concentration of theophylline increased by **CIPROFLOXACIN** and **NORFLOXACIN**; metabolism of theophylline accelerated by **RIFAMPICIN** (reduced plasma concentration); possible increased risk of convulsions when theophylline given with **QUINOLONES**
- Antidepressants: plasma concentration of theophylline increased by **FLUVOXAMINE** (concomitant use should usually be avoided, but where not possible halve theophylline dose and monitor plasma-theophylline concentration); plasma concentration of theophylline possibly reduced by **ST JOHN'S WORT**
- Antiepileptics: metabolism of theophylline accelerated by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE** (reduced effect); plasma concentration of both drugs reduced when theophylline given with **FOSPHENYTOIN** and **PHENYTOIN**

**Theophylline** (continued)

- Antifungals: plasma concentration of theophylline possibly increased by **FLUCONAZOLE** and **KETOCONAZOLE**
  - Antivirals: plasma concentration of theophylline possibly increased by **ACICLOVIR** and **VALACICLOVIR**; metabolism of theophylline accelerated by **RITONAVIR** (reduced plasma concentration)
  - Anxiolytics and Hypnotics: theophylline possibly reduces effects of **BENZODIAZEPINES**
  - Caffeine citrate: avoidance of theophylline advised by manufacturer of **CAFFEINE CITRATE**
  - Calcium-channel Blockers: plasma concentration of theophylline possibly increased by **CALCIUM-CHANNEL BLOCKERS** (enhanced effect); plasma concentration of theophylline increased by **DILTIAZEM**; plasma concentration of theophylline increased by **VERAPAMIL** (enhanced effect)
  - Corticosteroids: increased risk of hypokalaemia when theophylline given with **CORTICOSTEROIDS**
  - Cytotoxics: plasma concentration of theophylline possibly increased by **METHOTREXATE**
  - Deferasirox: plasma concentration of theophylline increased by **DEFERASIROX** (consider reducing dose of theophylline)
  - Disulfiram: metabolism of theophylline inhibited by **DISULFIRAM** (increased risk of toxicity)
  - Diuretics: increased risk of hypokalaemia when theophylline given with **ACETAZOLAMIDE**, **LOOP DIURETICS** or **THIAZIDES AND RELATED DIURETICS**
  - Doxapram: increased CNS stimulation when theophylline given with **DOXAPRAM**
  - Interferons: metabolism of theophylline inhibited by **INTERFERON ALFA** and **PEGINTERFERON ALFA** (consider reducing dose of theophylline)
  - Leukotriene Receptor Antagonists: plasma concentration of theophylline possibly increased by **ZAFIRLUKAST**, also plasma concentration of zafirlukast reduced
  - Lithium: theophylline increases excretion of **LITHIUM** (reduced plasma concentration)
  - Oestrogens: plasma concentration of theophylline increased by **OESTROGENS** (consider reducing dose of theophylline)
  - Pentoxifylline: plasma concentration of theophylline increased by **PENTOXIFYLLINE**
  - Roflumilast: avoidance of theophylline advised by manufacturer of **ROFLUMILAST**
  - Sulfapyrazone: plasma concentration of theophylline reduced by **SULFINPYRAZONE**
  - Sympathomimetics: manufacturer of theophylline advises avoid concomitant use with **EPHEDRINE** in children
  - Sympathomimetics, Beta<sub>2</sub>: increased risk of hypokalaemia when theophylline given with high doses of **BETA<sub>2</sub> SYMPATHOMIMETICS**
  - Ulcer-healing Drugs: metabolism of theophylline inhibited by **CIMETIDINE** (increased plasma concentration); absorption of theophylline possibly reduced by **SUCRALFATE** (give at least 2 hours apart)
  - Vaccines: plasma concentration of theophylline possibly increased by **INFLUENZA VACCINE**
- Thiazolidinediones** see Antidiabetics
- Thiopental** see Anaesthetics, General
- Thiotepa**
- Antipsychotics: avoid concomitant use of cytotoxics with **CLOZAPINE** (increased risk of agranulocytosis)
  - Muscle Relaxants: thiotepa enhances effects of **SUXAMETHONIUM**
- Thioxanthenes** see Antipsychotics
- Thyroid Hormones**
- Antacids: absorption of levothyroxine possibly reduced by **ANTACIDS**
  - Anti-arrhythmics: serum concentrations of thyroid hormones can be affected by **AMIODARONE**—monitor thyroid function closely
  - Antibacterials: metabolism of levothyroxine accelerated by **RIFAMPICIN** (may increase requirements for levothyroxine in hypothyroidism)
  - Anticoagulants: thyroid hormones enhance anticoagulant effect of **COUMARINS** and **PHENINDIONE**

**Thyroid Hormones** (continued)

- ▶ Antidepressants: thyroid hormones enhance effects of **AMITRIPTYLINE** and **IMIPRAMINE**; thyroid hormones possibly enhance effects of **TRICYCLICS**
- ▶ Antiepileptics: metabolism of thyroid hormones accelerated by **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE** (may increase requirements for thyroid hormones in hypothyroidism); metabolism of thyroid hormones accelerated by **FOSPHENYTOIN** and **PHENYTOIN** (may increase requirements in hypothyroidism), also plasma concentration of fosphenytoin and phenytoin possibly increased
- ▶ Beta-blockers: levothyroxine accelerates metabolism of **PROPRANOLOL**
- ▶ Calcium Salts: absorption of levothyroxine reduced by **CALCIUM SALTS**
- ▶ Cytotoxics: plasma concentration of levothyroxine possibly reduced by **IMATINIB**
- ▶ Iron Salts: absorption of levothyroxine reduced by *oral* **IRON SALTS** (give at least 2 hours apart)
- ▶ Lanthanum: absorption of levothyroxine reduced by **LANTHANUM** (give at least 2 hours apart)
- ▶ Lipid-regulating Drugs: absorption of levothyroxine reduced by **COLESEVELAM**; absorption of thyroid hormones reduced by **COLESTIPOL** and **COLESTYRAMINE**
- ▶ Oestrogens: requirements for thyroid hormones in hypothyroidism may be increased by **OESTROGENS**
- ▶ Orlistat: possible increased risk of hypothyroidism when levothyroxine given with **ORLISTAT**
- ▶ Polystyrene Sulfonate Resins: absorption of levothyroxine reduced by **POLYSTYRENE SULFONATE RESINS**
- ▶ Sevelamer: absorption of levothyroxine possibly reduced by **SEVELAMER**
- ▶ Sympathomimetics: avoidance of thyroid hormones advised by manufacturer of **MIDODRINE**
- ▶ Ulcer-healing Drugs: absorption of levothyroxine reduced by **CIMETIDINE** and **SUCRALFATE**

**Tiagabine**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: plasma concentration of tiagabine reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

**Tiaprofenic Acid** see NSAIDs**Tibolone**

- ▶ Antibacterials: metabolism of tibolone accelerated by **RIFAMPICIN** (reduced plasma concentration)
- ▶ Antiepileptics: metabolism of tibolone accelerated by **CARBAMAZEPINE** (reduced plasma concentration); metabolism of tibolone accelerated by **FOSPHENYTOIN** and **PHENYTOIN**

**Ticagrelor**

- Antibacterials: plasma concentration of ticagrelor possibly increased by ● **CLARITHROMYCIN**—manufacturer of ticagrelor advises avoid concomitant use; plasma concentration of ticagrelor possibly increased by **ERYTHROMYCIN**; plasma concentration of ticagrelor reduced by ● **RIFAMPICIN**
- Anticoagulants: ticagrelor increases plasma concentration of ● **DABIGATRAN**
- ▶ Antidepressants: possible increased risk of bleeding when ticagrelor given with **CITALOPRAM**, **PAROXETINE** or **SERTRALINE**
- ▶ Antiepileptics: plasma concentration of ticagrelor possibly reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antifungals: plasma concentration of ticagrelor increased by ● **KETOCONAZOLE**—manufacturer of ticagrelor advises avoid concomitant use

**Ticagrelor** (continued)

- Antivirals: plasma concentration of ticagrelor possibly increased by ● **ATAZANAVIR** and ● **RITONAVIR**—manufacturer of ticagrelor advises avoid concomitant use
- ▶ Calcium-channel Blockers: plasma concentration of ticagrelor increased by **DILTIAZEM**
- Cardiac Glycosides: ticagrelor increases plasma concentration of ● **DIGOXIN**
- ▶ Ciclosporin: plasma concentration of ticagrelor increased by **CYCLOSPORIN**
- Ergot Alkaloids: ticagrelor possibly increases plasma concentration of ● **ERGOT ALKALOIDS**
- Lipid-regulating Drugs: ticagrelor increases plasma concentration of ● **SIMVASTATIN** (increased risk of toxicity); separating administration from ticagrelor by 12 hours advised by manufacturer of **LOMITAPIDE**

**Ticarcillin** see Penicillins**Tick-borne Encephalitis Vaccine** see Vaccines**Tigecycline**

- ▶ Anticoagulants: tigecycline possibly enhances anticoagulant effect of **COUMARINS**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Timolol** see Beta-blockers**Tinidazole**

- ▶ Alcohol: possibility of disulfiram-like reaction when tinidazole given with **ALCOHOL**
- ▶ Antibacterials: plasma concentration of tinidazole possibly reduced by **RIFAMPICIN**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Tinzaparin** see Heparins**Tioguanine**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cytotoxics: increased risk of hepatotoxicity when tioguanine given with **BUSULFAN**

**Tiotropium** see Antimuscarinics**Tipranavir**

- ▶ Analgesics: plasma concentration of tipranavir possibly reduced by **BUPRENORPHINE**
- ▶ Antacids: absorption of tipranavir reduced by **ANTACIDS** (give at least 2 hours apart)
- Antibacterials: tipranavir increases plasma concentration of ● **CLARITHROMYCIN** (reduce dose of clarithromycin in renal impairment), also plasma concentration of tipranavir increased by clarithromycin; tipranavir increases plasma concentration of ● **RIFABUTIN** (reduce dose of rifabutin); plasma concentration of tipranavir possibly reduced by ● **RIFAMPICIN**—avoid concomitant use; avoidance of concomitant tipranavir in severe renal and hepatic impairment advised by manufacturer of ● **TELITHROMYCIN**
- ▶ Anticoagulants: avoidance of tipranavir advised by manufacturer of **APIXABAN** and **RIVAROXABAN**
- Antidepressants: plasma concentration of tipranavir possibly reduced by ● **ST JOHN'S WORT**—avoid concomitant use
- ▶ Antiepileptics: plasma concentration of tipranavir possibly reduced by **CARBAMAZEPINE**
- ▶ Antifungals: plasma concentration of tipranavir increased by **FLUCONAZOLE**
- Antimalarials: caution with tipranavir advised by manufacturer of **ARTEMETHER WITH LUMEFANTRINE**; tipranavir possibly increases plasma concentration of ● **QUININE** (increased risk of toxicity)
- ▶ Antimuscarinics: avoidance of tipranavir advised by manufacturer of **DARIFENACIN**
- Antipsychotics: tipranavir possibly increases plasma concentration of ● **ARIPIPRAZOLE** (reduce dose of aripiprazole—consult aripiprazole product literature); tipranavir possibly increases plasma concentration of ● **QUETIAPINE**—manufacturer of quetiapine advises avoid concomitant use
- Antivirals: tipranavir reduces plasma concentration of ● **ABACAVIR**, ● **FOSAMPRENAVIR**, ● **LOPINAVIR**, ● **SAQUINAVIR** and ● **ZIDOVUDINE**; plasma concentration of tipranavir increased by **ATAZANAVIR** (also plasma concentration of atazanavir

**Tiplranavir**

- Antivirals (continued) reduced; manufacturer of tiplranavir advises avoid concomitant use with **BOCEPREVIR** and **TELAPREVIR**; tiplranavir reduces plasma concentration of **DIDANOSINE**—manufacturer of tiplranavir advises tiplranavir and didanosine *capsules* should be taken at least 2 hours apart; tiplranavir reduces the plasma concentration of ● **DOLUTEGRAVIR** (see under Dolutegravir, p. 592); tiplranavir reduces plasma concentration of ● **ETRAVIRINE**, also plasma concentration of tiplranavir increased (avoid concomitant use); avoidance of tiplranavir advised by manufacturer of **PARITAPREVIR**
- Beta-blockers: manufacturer of tiplranavir advises avoid concomitant use with ● **METOPROLOL** for heart failure
- ▶ Bosentan: manufacturer of tiplranavir advises avoid concomitant use with **BOSENTAN**
- Cobicistat: plasma concentration of both drugs reduced when tiplranavir given with ● **COBICISTAT** (avoid concomitant use)
- Lipid-regulating Drugs: increased risk of myopathy when tiplranavir given with ● **ATORVASTATIN** (see under Atorvastatin, p. 191); tiplranavir increases plasma concentration of ● **ROSUVASTATIN**—adjust dose of rosuvastatin (consult product literature); tiplranavir possibly increases plasma concentration of ● **SIMVASTATIN**—avoid concomitant use; avoidance of tiplranavir advised by manufacturer of ● **LOMITAPIDE** (plasma concentration of lomitapide possibly increased)
- Orlistat: absorption of tiplranavir possibly reduced by ● **ORLISTAT**
- Ranolazine: tiplranavir possibly increases plasma concentration of ● **RANOLAZINE**—manufacturer of ranolazine advises avoid concomitant use
- ▶ Sildenafil: manufacturer of tiplranavir advises avoid concomitant use of **SILDENAFIL** for pulmonary arterial hypertension
- ▶ Sympathomimetics, Beta<sub>2</sub>: manufacturer of tiplranavir advises avoid concomitant use with **SALMETEROL**
- Ulcer-healing Drugs: tiplranavir reduces plasma concentration of ● **ESOMEPRAZOLE** and ● **OMEPRAZOLE**
- ▶ Vardenafil: manufacturer of tiplranavir advises caution with **VARDEFIL**
- ▶ Vitamins: increased risk of bleeding when tiplranavir given with high doses of **VITAMIN E**

**Tirofiban**

- ▶ Iloprost: increased risk of bleeding when tirofiban given with **ILOPROST**

**Tizanidine** see Muscle Relaxants

**Tobramycin** see Aminoglycosides

**Tocilizumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Tolazoline** see Alpha-blockers

**Tolbutamide** see Antidiabetics

**Tolcapone**

- ▶ Antidepressants: avoid concomitant use of tolcapone with **MAOIs**
- ▶ Memantine: effects of dopaminergics possibly enhanced by **MEMANTINE**
- ▶ Methylodopa: antiparkinsonian effect of dopaminergics antagonised by **METHYLDOPA**

**Tolfenamic Acid** see NSAIDs

**Tolterodine** see Antimuscarinics

**Tolvaptan**

- ▶ Antibacterials: plasma concentration of tolvaptan reduced by **RIFAMPICIN**
- ▶ Antifungals: plasma concentration of tolvaptan increased by **KETOCONAZOLE**—manufacturer of ketoconazole advises avoid concomitant use
- ▶ Cardiac Glycosides: tolvaptan increases plasma concentration of **DIGOXIN** (increased risk of toxicity)
- Grapefruit Juice: plasma concentration of tolvaptan increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use
- ▶ Lipid-regulating Drugs: separating administration from tolvaptan by 12 hours advised by manufacturer of **LOMITAPIDE**

**Topiramate**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIs** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antidiabetics: topiramate possibly increases plasma concentration of **METFORMIN**; topiramate possibly reduces plasma concentration of **GLIBENCLAMIDE**
- Antiepileptics: plasma concentration of topiramate often reduced by **CARBAMAZEPINE**; topiramate increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (also plasma concentration of topiramate reduced); topiramate reduces plasma concentration of **PERAMPANEL**; plasma concentration of topiramate possibly reduced by **PHENOBARBITAL** and **PRIMIDONE**; hyperammonaemia and CNS toxicity reported when topiramate given with **SODIUM VALPROATE** and **VALPROIC ACID**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- ▶ Diuretics: plasma concentration of topiramate possibly increased by **HYDROCHLOROTHIAZIDE**
- ▶ Lithium: topiramate possibly affects plasma concentration of **LITHIUM**
- Oestrogens: topiramate accelerates metabolism of ● **OESTROGENS** (reduced contraceptive effect with combined oral contraceptives, contraceptive patches, and vaginal rings—see Contraceptive Interactions in BNF or BNFC)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- Progesterons: topiramate accelerates metabolism of ● **PROGESTOGENS** (reduced contraceptive effect with combined oral contraceptives, progesterone-only oral contraceptives, contraceptive patches, vaginal rings, etonogestrel-releasing implant, and emergency hormonal contraception—see Contraceptive Interactions in BNF or BNFC)

**Torasemide** see Diuretics

**Toremifene**

- Anticoagulants: toremifene possibly enhances anticoagulant effect of ● **COUMARINS**
- ▶ Antiepileptics: metabolism of toremifene possibly accelerated by **CARBAMAZEPINE** (reduced plasma concentration); metabolism of toremifene possibly accelerated by **FOSPHENYTOIN** and **PHENYTOIN**; metabolism of toremifene accelerated by **PHENOBARBITAL** and **PRIMIDONE** (reduced plasma concentration)
- Cytotoxics: possible increased risk of ventricular arrhythmias when toremifene given with ● **VANDETANIB**—avoid concomitant use
- ▶ Diuretics: increased risk of hypercalcaemia when toremifene given with **THIAZIDES AND RELATED DIURETICS**

**Trabectedin**

- Alcohol: manufacturer of trabectedin advises avoid concomitant use with ● **ALCOHOL**
- Antibacterials: plasma concentration of trabectedin reduced by ● **RIFAMPICIN**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when trabectedin given with live ● **VACCINES**—avoid concomitant use

**Tramadol** see Opioid Analgesics

**Trandolapril** see ACE Inhibitors

**Tranylcypromine** see MAOIs

**Trastuzumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
  - Cytotoxics: possible increased risk of cardiotoxicity when trastuzumab given with ● **DAUNORUBICIN**, ● **DOXORUBICIN**, ● **EPIRUBICIN** and ● **IDARUBICIN**—avoid concomitant use for up to 28 weeks after stopping trastuzumab
  - Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use
- Trazodone** see Antidepressants, Tricyclic (related)

**Tretinoin** see Retinoids

**Triamcinolone** see Corticosteroids

**Triamterene** see Diuretics

**Trientine**

- ▶ Iron Salts: trientine reduces absorption of *oral* **IRON SALTS**
- ▶ Zinc: trientine reduces absorption of **ZINC**, also absorption of trientine reduced by zinc

**Trifluoperazine** see Antipsychotics

**Trihexyphenidyl** see Antimuscarinics

**Trimethoprim**

- ▶ ACE Inhibitors: possible increased risk of hyperkalaemia when trimethoprim given with **ACE INHIBITORS**
  - ▶ Angiotensin-II Receptor Antagonists: possible increased risk of hyperkalaemia when trimethoprim given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
  - ▶ Anti-arrhythmics: possible increased risk of ventricular arrhythmias when trimethoprim (as co-trimoxazole) given with **AMIODARONE**—manufacturer of amiodarone advises avoid concomitant use of co-trimoxazole
  - ▶ Antibacterials: plasma concentration of trimethoprim possibly reduced by **RIFAMPICIN**; plasma concentration of both drugs may increase when trimethoprim given with **DAPSONE**
  - ▶ Anticoagulants: trimethoprim possibly enhances anticoagulant effect of **COUMARINS**
  - ▶ Antidiabetics: trimethoprim possibly enhances hypoglycaemic effect of **REPAGLINIDE**—manufacturer advises avoid concomitant use; trimethoprim rarely enhances the effects of **SULFONYLUREAS**
  - Antiepileptics: trimethoprim increases plasma concentration of ● **FOSPHENYTOIN** and ● **PHENYTOIN** (also increased antifolate effect)
  - Antimalarials: increased antifolate effect when trimethoprim given with ● **PYRIMETHAMINE**
  - ▶ Antivirals: trimethoprim (as co-trimoxazole) increases plasma concentration of **LAMIVUDINE**—avoid concomitant use of high-dose co-trimoxazole
  - Azathioprine: increased risk of haematological toxicity when trimethoprim (also with co-trimoxazole) given with ● **AZATHIOPRINE**
  - ▶ Cardiac Glycosides: trimethoprim possibly increases plasma concentration of **DIGOXIN**
  - Ciclosporin: increased risk of nephrotoxicity when trimethoprim given with ● **CICLOSPORIN**, also plasma concentration of ciclosporin reduced by *intravenous* trimethoprim
  - Cytotoxics: increased risk of haematological toxicity when trimethoprim (also with co-trimoxazole) given with ● **MERCAPTOPYRINE**; increased risk of severe bone marrow depression (fatalities reported) and other haematological toxicities when trimethoprim (also with co-trimoxazole) given with ● **METHOTREXATE**
  - ▶ Diuretics: increased risk of hyperkalaemia when trimethoprim given with **EPLERENONE**; possible increased risk of hyperkalaemia when trimethoprim given with **SPIRONOLACTONE**
  - Tacrolimus: possible increased risk of nephrotoxicity when trimethoprim given with ● **TACROLIMUS**
  - ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC
- Trimipramine** see Antidepressants, Tricyclic
- Tripotassium Dicitratobismuthate**
- ▶ Antibacterials: tripotassium dicitratobismuthate reduces absorption of **TETRACYCLINES**
- Tropicamide** see Antimuscarinics
- Tropium** see Antimuscarinics
- Typhoid Vaccine (oral)** see Vaccines
- Typhoid Vaccine (parenteral)** see Vaccines
- Ubidecarenone**
- ▶ Anticoagulants: ubidecarenone may enhance or reduce anticoagulant effect of **WARFARIN**
- Ulcer-healing Drugs** see Histamine H<sub>2</sub>-antagonists, Proton Pump Inhibitors, Sucralfate, and Tripotassium Dicitratobismuthate
- Ulipristal**
- Antibacterials: manufacturer of *low-dose* ulipristal advises avoid concomitant use with **CLARITHROMYCIN** and **TELITHROMYCIN**; plasma concentration of *low-dose* ulipristal

**Ulipristal**

- Antibacterials (continued)
  - increased by **ERYTHROMYCIN**—manufacturer of *low-dose* ulipristal advises avoid concomitant use; manufacturer of ulipristal advises avoid concomitant use with ● **RIFAMPICIN** (contraceptive effect of ulipristal possibly reduced)
- ▶ Anticoagulants: manufacturer of ulipristal advises give **DABIGATRAN** at least 1.5 hours before or after ulipristal
- Antidepressants: manufacturer of ulipristal advises avoid concomitant use with ● **ST JOHN'S WORT** (contraceptive effect of ulipristal possibly reduced)
- Antiepileptics: manufacturer of ulipristal advises avoid concomitant use with ● **CARBAMAZEPINE**, ● **FOSPHENYTOIN**, ● **PHENOBARBITAL**, ● **PHENYTOIN** and ● **PRIMIDONE** (contraceptive effect of ulipristal possibly reduced)
- ▶ Antifungals: plasma concentration of *low-dose* ulipristal increased by **KETOCONAZOLE**—manufacturer of *low-dose* ulipristal advises avoid concomitant use; manufacturer of ulipristal advises avoid concomitant use with **ITRACONAZOLE**
- ▶ Antihistamines: manufacturer of ulipristal advises give **FEXOFENADINE** at least 1.5 hours before or after ulipristal
- Antivirals: manufacturer of ulipristal advises avoid concomitant use with ● **RITONAVIR** (contraceptive effect of ulipristal possibly reduced)
- ▶ Calcium-channel Blockers: manufacturer of *low-dose* ulipristal advises avoid concomitant use with **VERAPAMIL**
- ▶ Cardiac Glycosides: manufacturer of ulipristal advises give **DIGOXIN** at least 1.5 hours before or after ulipristal
- ▶ Grapefruit Juice: manufacturer of *low-dose* ulipristal advises avoid concomitant use with **GRAPEFRUIT JUICE**
- Progestogens: ulipristal possibly reduces contraceptive effect of ● **PROGESTOGENS**

**Umeclidinium** see Antimuscarinics

**Ursodeoxycholic Acid** see Bile Acids

**Ustekinumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Vaccines**

- Abatacept: risk of generalised infections when live vaccines given with ● **ABATACEPT**—avoid concomitant use
- ▶ Aminophylline: influenza vaccine possibly increases plasma concentration of **AMINOPHYLLINE**
- Anakinra: risk of generalised infections when live vaccines given with ● **ANAKINRA**—avoid concomitant use
- ▶ Antibacterials: oral typhoid vaccine inactivated by **ANTIBACTERIALS**—see under Typhoid Vaccine in BNF or BNFC
- ▶ Anticoagulants: influenza vaccine possibly enhances anticoagulant effect of **WARFARIN**
- ▶ Antidepressants: oral typhoid vaccine inactivated by antibacterials including **LINEZOLID** and **TEDIZOLID**—see under Typhoid Vaccine in BNF or BNFC
- ▶ Antiepileptics: influenza vaccine enhances effects of **FOSPHENYTOIN** and **PHENYTOIN**
- ▶ Antimalarials: oral typhoid vaccine inactivated by **ANTIMALARIALS**—see under Typhoid Vaccine in BNF or BNFC
- Azathioprine: risk of generalised infections when live vaccines given with ● **AZATHIOPRINE**—avoid concomitant use
- Corticosteroids: immune response to vaccines impaired by high doses of ● **CORTICOSTEROIDS**—avoid concomitant use with live vaccines
- Cytotoxics: risk of generalised infections when live vaccines given with ● **CYTOTOXIC ANTIBIOTICS**, ● **HYDROXYCARBAMIDE**, ● **MONOCLONAL ANTIBODIES** or ● **TRABECTEDIN**—avoid concomitant use
- Dextrazoxane: risk of generalised infections when live vaccines given with ● **DEXRAZOXANE**—avoid concomitant use
- Etanercept: risk of generalised infections when live vaccines given with ● **ETANERCEPT**—avoid concomitant use
- Immunoglobulins: impaired immune response to BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine might occur with ● **ANTI-D IMMUNOGLOBULINS**—give BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow

## Vaccines

- Immunoglobulins (continued)
  - fever vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins; impaired immune response to live influenza vaccine might occur with ● **ANTI-D IMMUNOGLOBULINS** and ● **NORMAL IMMUNOGLOBULIN**—give live influenza vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; impaired immune response to *oral* poliomyelitis vaccine might occur with ● **ANTI-D IMMUNOGLOBULINS** and ● **NORMAL IMMUNOGLOBULIN**—give *oral* poliomyelitis vaccine at least 3 weeks before or 3 months after anti-d immunoglobulins and normal immunoglobulin; impaired immune response to BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine might occur with ● **NORMAL IMMUNOGLOBULIN**—give BCG vaccine, MMR vaccine, oral typhoid vaccine, rotavirus vaccine, smallpox vaccine, varicella-zoster vaccine and yellow fever vaccine at least 3 weeks before or 3 months after normal immunoglobulin
- ▶ Interferons: avoidance of vaccines advised by manufacturer of **INTERFERON GAMMA**
- Leflunomide: risk of generalised infections when live vaccines given with ● **LEFLUNOMIDE**—avoid concomitant use
- Teriflunomide: risk of generalised infections when live vaccines given with ● **TERIFLUNOMIDE**—avoid concomitant use
- ▶ Theophylline: influenza vaccine possibly increases plasma concentration of **THEOPHYLLINE**

## Valaciclovir

- ▶ Aminophylline: valaciclovir possibly increases plasma concentration of **AMINOPHYLLINE**
- ▶ Ciclosporin: increased risk of nephrotoxicity when valaciclovir given with **CYCLOSPORIN**
- ▶ Mycophenolate: plasma concentration of valaciclovir increased by **MYCOPHENOLATE**, also plasma concentration of inactive metabolite of mycophenolate increased
- ▶ Tacrolimus: possible increased risk of nephrotoxicity when valaciclovir given with **TACROLIMUS**
- ▶ Theophylline: valaciclovir possibly increases plasma concentration of **THEOPHYLLINE**

## Valganciclovir

- Antibacterials: increased risk of convulsions when valganciclovir given with ● **IMIPENEM WITH CILASTATIN**
- Antivirals: valganciclovir possibly increases plasma concentration of **DIDANOSINE**; profound myelosuppression when valganciclovir given with ● **ZIDOVUDINE** (if possible avoid concomitant administration, particularly during initial valganciclovir therapy)
- ▶ Mycophenolate: plasma concentration of valganciclovir possibly increased by **MYCOPHENOLATE**, also plasma concentration of inactive metabolite of mycophenolate possibly increased
- ▶ Tacrolimus: possible increased risk of nephrotoxicity when valganciclovir given with **TACROLIMUS**

## Valproic acid

- ▶ Analgesics: effects of valproic acid enhanced by **ASPIRIN**
- Antibacterials: metabolism of valproic acid possibly inhibited by **ERYTHROMYCIN** (increased plasma concentration); avoidance of valproic acid advised by manufacturer of ● **PIVMECILLINAM**; plasma concentration of valproic acid reduced by ● **CARBAPENEMS**—avoid concomitant use
- ▶ Anticoagulants: valproic acid possibly enhances anticoagulant effect of **COUMARINS**
- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- Antiepileptics: plasma concentration of valproic acid reduced by **CARBAMAZEPINE**, also plasma concentration of active metabolite of carbamazepine increased; valproic acid possibly increases plasma concentration of **ETHOSUXIMIDE**; valproic acid increases or possibly decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**, also plasma concentration of valproic acid reduced; valproic acid increases plasma concentration of ● **LAMOTRIGINE** (increased risk of toxicity—

## Valproic Acid

- Antiepileptics (continued)
  - reduce lamotrigine dose); valproic acid sometimes reduces plasma concentration of an active metabolite of **OXCARBAZEPINE**; valproic acid increases plasma concentration of **PHENOBARBITAL** and **PRIMIDONE** (also plasma concentration of valproic acid reduced); valproic acid possibly increases plasma concentration of **RUFINAMIDE** (reduce dose of rufinamide); hyperammonaemia and CNS toxicity reported when valproic acid given with **TOPIRAMATE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered); valproic acid possibly increases or decreases plasma concentration of **CLOZAPINE**; increased risk of side-effects including neutropenia when valproic acid given with ● **OLANZAPINE**
- ▶ Antivirals: plasma concentration of valproic acid possibly reduced by **RITONAVIR**; valproic acid possibly increases plasma concentration of **ZIDOVUDINE** (increased risk of toxicity)
- ▶ Anxiolytics and Hypnotics: plasma concentration of valproic acid possibly increased by **CLOBAZAM**; increased risk of side-effects when valproic acid given with **CLONAZEPAM**; valproic acid possibly increases plasma concentration of **DIAZEPAM** and **LORAZEPAM**
- ▶ Bupropion: valproic acid inhibits the metabolism of **BUPROPION**
- ▶ Cytotoxics: valproic acid increases plasma concentration of **TEMOZOLOMIDE**
- ▶ Guanfacine: plasma concentration of valproic acid increased by **GUANFACINE**
- ▶ Lipid-regulating Drugs: absorption of valproic acid possibly reduced by **COLESTYRAMINE**
- ▶ Netupitant: caution with valproic acid advised by manufacturer of **NETUPITANT**
- ▶ Oestrogens: plasma concentration of valproic acid possibly reduced by **ETHINYLESTRADIOL**
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**
- ▶ Sodium Benzoate: valproic acid possibly reduces effects of **SODIUM BENZOATE**
- Sodium Oxybate: valproic acid increases the plasma concentration of ● **SODIUM OXYBATE** (see under Sodium Oxybate, p. 455)
- ▶ Sodium Phenylbutyrate: valproic acid possibly reduces effects of **SODIUM PHENYLBUTYRATE**
- Ulcer-healing Drugs: metabolism of valproic acid inhibited by ● **CIMETIDINE** (increased plasma concentration)

**Valsartan** see Angiotensin-II Receptor Antagonists

## Vancomycin

- ▶ Anaesthetics, General: hypersensitivity-like reactions can occur when *intravenous* vancomycin given with **GENERAL ANAESTHETICS**
- Antibacterials: increased risk of nephrotoxicity and ototoxicity when vancomycin given with ● **AMINOGLYCOSIDES**, **CAPREOMYCIN** or **COLISTIMETHATE SODIUM**; increased risk of nephrotoxicity when vancomycin given with **POLYMYXINS**
- ▶ Antifungals: possible increased risk of nephrotoxicity when vancomycin given with **AMPHOTERICIN**
- ▶ Ciclosporin: increased risk of nephrotoxicity when vancomycin given with ● **CYCLOSPORIN**
- ▶ Cytotoxics: increased risk of nephrotoxicity and possibly of ototoxicity when vancomycin given with **CISPLATIN**
- Diuretics: increased risk of ototoxicity when vancomycin given with ● **LOOP DIURETICS**
- ▶ Lipid-regulating Drugs: effects of *oral* vancomycin antagonised by **COLESTYRAMINE**
- Muscle Relaxants: vancomycin enhances effects of ● **SUXAMETHONIUM**
- ▶ Tacrolimus: possible increased risk of nephrotoxicity when vancomycin given with **TACROLIMUS**
- ▶ Vaccines: antibacterials inactivate **ORAL TYPHOID VACCINE**—see under Typhoid Vaccine in BNF or BNFC

**Vandetanib**

- Analgesics: possible increased risk of ventricular arrhythmias when vandetanib given with ● **METHADONE**—avoid concomitant use
- Anti-arrhythmics: possible increased risk of ventricular arrhythmias when vandetanib given with ● **AMIODARONE** or ● **DISOPYRAMIDE**—avoid concomitant use
- Antibacterials: possible increased risk of ventricular arrhythmias when vandetanib given with *parenteral* ● **ERYTHROMYCIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when vandetanib given with ● **MOXIFLOXACIN**—avoid concomitant use; plasma concentration of vandetanib reduced by ● **RIFAMPICIN**—manufacturer of vandetanib advises avoid concomitant use
- ▶ Antidepressants: manufacturer of vandetanib advises avoid concomitant use with **ST JOHN'S WORT** (plasma concentration of vandetanib possibly reduced)
- ▶ Antidiabetics: vandetanib possibly increases plasma concentration of **METFORMIN** (consider reducing dose of metformin)
- ▶ Antiepileptics: manufacturer of vandetanib advises avoid concomitant use with **CARBAMAZEPINE**, **PHENOBARBITAL** and **PRIMIDONE** (plasma concentration of vandetanib possibly reduced)
- Antihistamines: possible increased risk of ventricular arrhythmias when vandetanib given with ● **MIZOLASTINE**—avoid concomitant use
- Antimalarials: possible increased risk of ventricular arrhythmias when vandetanib given with ● **ARTEMETHER WITH LUMEFANTRINE**—avoid concomitant use
- Antipsychotics: possible increased risk of ventricular arrhythmias when vandetanib given with ● **AMISULPRIDE**, ● **CHLORPROMAZINE**, ● **HALOPERIDOL**, ● **PIMOZIDE**, ● **SULPIRIDE** or ● **ZUCLOPENTHIXOL**—avoid concomitant use; avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Beta-blockers: possible increased risk of ventricular arrhythmias when vandetanib given with ● **SOTALOL**—avoid concomitant use
- ▶ Cardiac glycosides: vandetanib increases plasma concentration of **DIGOXIN**—possible increased risk of bradycardia
- Cytotoxics: possible increased risk of ventricular arrhythmias when vandetanib given with ● **ARSENIC TRIOXIDE**—avoid concomitant use
- Hormone Antagonists: possible increased risk of ventricular arrhythmias when vandetanib given with ● **TOREMIFENE**—avoid concomitant use
- 5HT<sub>2</sub>-receptor Antagonists: increased risk of ventricular arrhythmias when vandetanib given with ● **ONDANSETRON**—avoid concomitant use
- Pentamidine Isetionate: possible increased risk of ventricular arrhythmias when vandetanib given with ● **PENTAMIDINE ISETIONATE**—avoid concomitant use

**Vardenafil**

- Alpha-blockers: enhanced hypotensive effect when vardenafil given with ● **ALPHA-BLOCKERS**—when patient is stable on the alpha blocker initiate vardenafil at the lowest possible dose—separate doses by 6 hours (except with tamsulosin)
- ▶ Anti-arrhythmics: avoidance of vardenafil advised by manufacturer of **DISOPYRAMIDE** (risk of ventricular arrhythmias)
- ▶ Antibacterials: plasma concentration of vardenafil possibly increased by **CLARITHROMYCIN** (consider reducing initial dose of vardenafil); plasma concentration of vardenafil increased by **ERYTHROMYCIN** (reduce dose of vardenafil)
- Antifungals: plasma concentration of vardenafil increased by ● **KETOCONAZOLE**—avoid concomitant use; plasma concentration of vardenafil possibly increased by ● **ITRACONAZOLE**—avoid concomitant use
- Antivirals: plasma concentration of vardenafil possibly increased by **FOSAMPRENAVIR**; plasma concentration of vardenafil increased by ● **INDINAVIR** and ● **RITONAVIR**—avoid concomitant use; increased risk of ventricular arrhythmias when vardenafil given with ● **SAQUINAVIR**—avoid concomitant use; avoidance of vardenafil advised by manufacturer of

**Vardenafil**

- Antivirals (continued)
  - **TELAPREVIR**; caution with vardenafil advised by manufacturer of **TIPRANAVIR**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when vardenafil given with **NIFEDIPINE**
- Cobicistat: plasma concentration of vardenafil possibly increased by ● **COBICISTAT**—manufacturer of cobicistat advises reduce dose of vardenafil (consult cobicistat product literature)
- ▶ Dapoxetine: avoidance of vardenafil advised by manufacturer of **DAPOXETINE**
- Grapefruit Juice: plasma concentration of vardenafil possibly increased by ● **GRAPEFRUIT JUICE**—avoid concomitant use
- Nicorandil: possible increased hypotensive effect when vardenafil given with ● **NICORANDIL**—avoid concomitant use
- Nitrates: possible increased hypotensive effect when vardenafil given with ● **NITRATES**—avoid concomitant use
- Riociguat: possible enhanced hypotensive effect when vardenafil given with ● **RIOCIQUAT**—avoid concomitant use

**Varicella-zoster Vaccine** *see* Vaccines**Vasodilator Antihypertensives**

- ▶ ACE Inhibitors: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ACE INHIBITORS**
- ▶ Adrenergic Neurone Blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ADRENERGIC NEURONE BLOCKERS**
- ▶ Alcohol: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALCOHOL**
- ▶ Aldesleukin: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALDESLEUKIN**
- ▶ Alpha-blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALPHA-BLOCKERS**
- ▶ Anaesthetics, General: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **GENERAL ANAESTHETICS**
- ▶ Analgesics: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by **NSAIDS**
- ▶ Angiotensin-II Receptor Antagonists: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ANGIOTENSIN-II RECEPTOR ANTAGONISTS**
- ▶ Antidepressants: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **MAOIs**; enhanced hypotensive effect when hydralazine or sodium nitroprusside given with **TRICYCLIC-RELATED ANTI-DEPRESSANTS**
- ▶ Antipsychotics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **PHENOTHIAZINES**
- ▶ Anxiolytics and Hypnotics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ANXIOLYTICS AND HYPNOTICS**
- ▶ Beta-blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **BETA-BLOCKERS**
- ▶ Calcium-channel Blockers: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CALCIUM-CHANNEL BLOCKERS**
- ▶ Clonidine: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CLONIDINE**
- ▶ Corticosteroids: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by **CORTICOSTEROIDS**
- ▶ Diazoxide: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **DIAZOXIDE**
- ▶ Diuretics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **DIURETICS**
- ▶ Dopaminergics: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CO-BENELDOPA**; enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **CO-CARELDOPA**; enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **LEVODOPA**
- ▶ Methyldopa: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **METHYLDOPA**
- ▶ Moxisylyte: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **MOXISYLYTE**

**Vasodilator Antihypertensives** (continued)

- ▶ Moxonidine: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **MOXONIDINE**
- ▶ Muscle Relaxants: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **BACLOFEN**; enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **TIZANIDINE**
- ▶ Nicorandil: possible enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **NICORANDIL**
- ▶ Nitrates: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **NITRATES**
- ▶ Oestrogens: hypotensive effect of hydralazine, minoxidil and sodium nitroprusside antagonised by **OESTROGENS**
- ▶ Prostaglandins: enhanced hypotensive effect when hydralazine, minoxidil or sodium nitroprusside given with **ALPROSTADIL**
- ▶ Vasodilator Antihypertensives: enhanced hypotensive effect when hydralazine given with **MINOXIDIL** or **SODIUM NITROPRUSSIDE**; enhanced hypotensive effect when minoxidil given with **SODIUM NITROPRUSSIDE**

**Vecuronium** see Muscle Relaxants

**Vedolizumab**

- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- Vaccines: risk of generalised infections when monoclonal antibodies given with live ● **VACCINES**—avoid concomitant use

**Vemurafenib**

- ▶ Antibacterials: manufacturer of vemurafenib advises avoid concomitant use with **RIFABUTIN** and **RIFAMPICIN**
- Anticoagulants: vemurafenib possibly enhances anticoagulant effect of ● **WARFARIN**
- ▶ Antidepressants: manufacturer of vemurafenib advises avoid concomitant use with **ST JOHN'S WORT**
- ▶ Antiepileptics: manufacturer of vemurafenib advises avoid concomitant use with **CARBAMAZEPINE**, **FOSPHENYTOIN** and **PHENYTOIN**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Cytotoxics: avoidance of vemurafenib advised by manufacturer of **IPILIMUMAB**
- Oestrogens: manufacturer of vemurafenib advises contraceptive effect of ● **OESTROGENS** possibly reduced
- Progestogens: manufacturer of vemurafenib advises contraceptive effect of ● **PROGESTOGENS** possibly reduced

**Venlafaxine**

- Analgesics: increased risk of bleeding when venlafaxine given with ● **NSAIDS** or ● **ASPIRIN**; possible increased serotonergic effects when SSRI-related antidepressants given with **FENTANYL**; possible increased serotonergic effects when venlafaxine given with **TRAMADOL**
- Anti-arrhythmics: manufacturer of venlafaxine advises avoid concomitant use with ● **AMIODARONE** (risk of ventricular arrhythmias)
- Antibacterials: manufacturer of venlafaxine advises avoid concomitant use with ● **ERYTHROMYCIN** and ● **MOXIFLOXACIN** (risk of ventricular arrhythmias)
- Anticoagulants: venlafaxine possibly enhances anticoagulant effect of ● **WARFARIN**; possible increased risk of bleeding when SSRI-related antidepressants given with ● **DABIGATRAN**
- Antidepressants: possible increased serotonergic effects when venlafaxine given with **ST JOHN'S WORT**, **DULOXETINE** or **MIRTAZAPINE**; enhanced CNS effects and toxicity when venlafaxine given with ● **MAOIS** (venlafaxine should not be started until 2 weeks after stopping MAOIs, avoid MAOIs for 1 week after stopping venlafaxine); after stopping SSRI-related antidepressants do not start ● **MOCLOBEMIDE** for at least 1 week; possible increased risk of convulsions when SSRI-related antidepressants given with ● **VORTIOXETINE**
- Antimalarials: avoidance of antidepressants advised by manufacturer of ● **ARTEMETHER WITH LUMEFANTRINE** and ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: venlafaxine increases plasma concentration of **HALOPERIDOL**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**

**Venlafaxine** (continued)

- Beta-blockers: manufacturer of venlafaxine advises avoid concomitant use with ● **SOTALOL** (risk of ventricular arrhythmias)
- Dapoxetine: possible increased risk of serotonergic effects when venlafaxine given with ● **DAPOXETINE** (manufacturer of dapoxetine advises venlafaxine should not be started until 1 week after stopping dapoxetine, avoid dapoxetine for 2 weeks after stopping venlafaxine)
- Dopaminergics: caution with venlafaxine advised by manufacturer of **ENTACAPONE**; increased risk of hypertension and CNS excitation when venlafaxine given with ● **SELEGILINE** (selegiline should not be started until 1 week after stopping venlafaxine, avoid venlafaxine for 2 weeks after stopping selegiline)
- ▶ 5HT<sub>1</sub>-receptor Agonists: possible increased serotonergic effects when venlafaxine given with **5HT<sub>1</sub> AGONISTS**
- ▶ 5HT<sub>2</sub>-receptor Antagonists: possible increased serotonergic effects when SSRI-related antidepressants given with **5HT<sub>2</sub> ANTAGONISTS**
- ▶ Lithium: possible increased serotonergic effects when venlafaxine given with **LITHIUM**
- Methylthionium: risk of CNS toxicity when SSRI-related antidepressants given with ● **METHYLTHIONIUM**—avoid concomitant use (if avoidance not possible, use lowest possible dose of methylthionium and observe patient for up to 4 hours after administration)

**Verapamil** see Calcium-channel Blockers

**Vigabatrin**

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIS** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: vigabatrin reduces plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

**Vilanterol** see Sympathomimetics, Beta<sub>2</sub>

**Vildagliptin** see Antidiabetics

**Vinblastine**

- Aldesleukin: avoidance of vinblastine advised by manufacturer of ● **ALDESLEUKIN**
- Antibacterials: toxicity of vinblastine increased by ● **ERYTHROMYCIN**—avoid concomitant use; possible increased risk of ventricular arrhythmias when vinblastine given with ● **DELAMANID**
- Antifungals: possible increased risk of vinblastine toxicity when given with ● **ITRACONAZOLE**; metabolism of vinblastine possibly inhibited by ● **POSACONAZOLE** (increased risk of neurotoxicity)
- Antimalarials: avoidance of vinblastine advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Antivirals: plasma concentration of vinblastine possibly increased by **RITONAVIR**

**Vincristine**

- Antibacterials: possible increased risk of ventricular arrhythmias when vincristine given with ● **DELAMANID**
- Antifungals: increased risk of vincristine toxicity when given with ● **ITRACONAZOLE**; metabolism of vincristine possibly inhibited by ● **POSACONAZOLE** (increased risk of neurotoxicity)
- Antimalarials: avoidance of vincristine advised by manufacturer of ● **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with ● **CLOZAPINE** (increased risk of agranulocytosis)
- ▶ Calcium-channel Blockers: metabolism of vincristine possibly inhibited by **NIFEDIPINE**
- ▶ Cardiac Glycosides: vincristine possibly reduces absorption of **DIGOXIN** tablets

**Vincristine** (continued)

- Cytotoxics: increased risk of hepatotoxicity when vincristine given with • **DACTINOMYCIN**

**Vindesine**

- Antibacterials: possible increased risk of ventricular arrhythmias when vindesine given with • **DELAMANID**
- Antifungals: possible increased risk of vindesine toxicity when given with • **ITRACONAZOLE**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)

**Vinflunine**

- Antibacterials: plasma concentration of vinflunine possibly reduced by • **RIFAMPICIN**—manufacturer of vinflunine advises avoid concomitant use; increased risk of ventricular arrhythmias when vinflunine given with • **DELAMANID**
- Antidepressants: plasma concentration of vinflunine possibly reduced by • **ST JOHN'S WORT**—manufacturer of vinflunine advises avoid concomitant use
- Antifungals: plasma concentration of vinflunine increased by • **KETOCONAZOLE**—manufacturer of vinflunine advises avoid concomitant use; possible increased risk of vinflunine toxicity when given with • **ITRACONAZOLE**
- Antimalarials: avoidance of vinflunine advised by manufacturer of • **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)
- Antivirals: plasma concentration of vinflunine possibly increased by • **RITONAVIR**—manufacturer of vinflunine advises avoid concomitant use
- ▶ Grapefruit Juice: plasma concentration of vinflunine possibly increased by **GRAPEFRUIT JUICE**—manufacturer of vinflunine advises avoid concomitant use

**Vinorelbine**

- Antibacterials: possible increased risk of neutropenia when vinorelbine given with • **CLARITHROMYCIN**; possible increased risk of ventricular arrhythmias when vinorelbine given with • **DELAMANID**
- Antifungals: possible increased risk of vinorelbine toxicity when given with • **ITRACONAZOLE**
- Antimalarials: avoidance of vinorelbine advised by manufacturer of • **ARTENIMOL WITH PIPERAQUINE**
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)

**Vismodegib**

- Antibacterials: manufacturer of vismodegib advises avoid concomitant use with • **RIFAMPICIN** (plasma concentration of vismodegib possibly reduced)
- Antidepressants: manufacturer of vismodegib advises avoid concomitant use with • **ST JOHN'S WORT** (plasma concentration of vismodegib possibly reduced)
- Antiepileptics: manufacturer of vismodegib advises avoid concomitant use with • **CARBAMAZEPINE**, • **FOSPHENYTOIN** and • **PHENYTOIN** (plasma concentration of vismodegib possibly reduced)
- Antipsychotics: avoid concomitant use of cytotoxics with • **CLOZAPINE** (increased risk of agranulocytosis)

**Vitamin A** see Vitamins

**Vitamin D** see Vitamins

**Vitamin E** see Vitamins

**Vitamin K (Phytomenadione)** see Vitamins

**Vitamins**

- ▶ Antibacterials: absorption of vitamin A possibly reduced by **NEOMYCIN**
- Anticoagulants: vitamin E possibly enhances anticoagulant effect of • **COUMARINS**; vitamin K antagonises anticoagulant effect of • **COUMARINS** and • **PHENINDIONE**
- ▶ Antiepileptics: alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with **CARBAMAZEPINE**; alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with **FOSPHENYTOIN**; alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with **PHENOBARBITAL**; alfacalcidol, calcitriol, colecalciferol,

**Vitamins****Antiepileptics** (continued)

- dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with **PHENYTOIN**; alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D requirements possibly increased when given with **PRIMIDONE**
- ▶ Antifungals: plasma concentration of paricalcitol possibly increased by **KETOCONAZOLE**; effects of alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol and vitamin D possibly reduced by **MICONAZOLE**
- ▶ Antivirals: increased risk of bleeding when high doses of vitamin E given with **TIPRANAVIR**
- ▶ Ciclosporin: vitamin E possibly affects plasma concentration of **CYCLOSPORIN**
- ▶ Cytotoxics: effects of alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol and vitamin D possibly reduced by **DACTINOMYCIN**; avoidance of vitamin E advised by manufacturer of **IBRUTINIB**
- ▶ Diuretics: increased risk of hypercalcaemia when alfacalcidol, calcitriol, colecalciferol, dihydrotachysterol, ergocalciferol, paricalcitol or vitamin D given with **THIAZIDES AND RELATED DIURETICS**
- ▶ Dopaminergics: pyridoxine reduces effects of **LEVODOPA** when given without dopa-decarboxylase inhibitor
- ▶ Lipid-regulating Drugs: absorption of calcitriol possibly reduced by **COLESTYRAMINE** (give at least 1 hour before or 4 to 6 hours after colestyramine)
- Retinoids: risk of hypervitaminosis A when vitamin A given with • **RETINOIDs**—avoid concomitant use
- ▶ Selenium: ascorbic acid possibly reduces absorption of **SELENIUM** (give at least 4 hours apart)
- ▶ Sevelamer: absorption of calcitriol reduced by **SEVELAMER** (give at least 1 hour before or 3 hours after sevelamer)

**Voriconazole** see Antifungals, Triazole

**Vortioxetine**

- ▶ Analgesics: possible increased serotonergic effects when vortioxetine given with **TRAMADOL**
- Antibacterials: plasma concentration of vortioxetine reduced by • **RIFAMPICIN**—consider increasing dose of vortioxetine
- Antidepressants: plasma concentration of vortioxetine possibly increased by **FLUOXETINE** and **PAROXETINE** (consider reducing dose of vortioxetine); increased risk of hypertension and CNS excitation when vortioxetine given with • **MAOIS** (vortioxetine should not be started until 2 weeks after stopping MAOIs, avoid MAOIs for 2 weeks after stopping vortioxetine); manufacturer of vortioxetine advises avoid concomitant use with • **LINEZOLID** and • **MOCLOBEMIDE**; possible increased risk of convulsions when vortioxetine given with • **SSRI-RELATED ANTIDEPRESSANTS**, • **SSRIS** or • **TRICYCLICS**; possible increased serotonergic effects when vortioxetine given with **ST JOHN'S WORT**
- Antiepileptics: plasma concentration of vortioxetine possibly reduced by • **CARBAMAZEPINE**, • **FOSPHENYTOIN** and • **PHENYTOIN**—consider increasing dose of vortioxetine
- Antimalarials: avoidance of antidepressants advised by manufacturer of • **ARTEMETHER WITH LUMEFANTRINE** and • **ARTENIMOL WITH PIPERAQUINE**; possible increased risk of convulsions when vortioxetine given with • **MEFLOQUINE**
- Antipsychotics: possible increased risk of convulsions when vortioxetine given with • **BUTYROPHENONES**, • **PHENOTHIAZINES** or • **THIOXANTHENS**
- ▶ Atomoxetine: possible increased risk of convulsions when antidepressants given with **ATOMOXETINE**
- ▶ Bupropion: plasma concentration of vortioxetine increased by **BUPROPION** (consider reducing dose of vortioxetine)
- Dopaminergics: risk of CNS excitation and hypertension when vortioxetine given with • **RASAGILINE** or • **SELEGILINE**
- 5HT<sub>1</sub>-receptor Agonists: possible increased serotonergic effects when vortioxetine given with **5HT<sub>1</sub> AGONISTS**

**Warfarin** see Coumarins

**Wasp Venom Extracts**

- ACE Inhibitors: possible severe anaphylactoid reaction when wasp venom extracts given with • **ACE INHIBITORS**

**Xipamide** see Diuretics

**Xylometazoline** see Sympathomimetics

**Yellow Fever Vaccine** see Vaccines

**Zafirlukast** see Leukotriene Receptor Antagonists

**Zaleplon** see Anxiolytics and Hypnotics

### Zidovudine

**NOTE** Increased risk of toxicity with nephrotoxic and myelosuppressive drugs—for further details consult product literature

- ▶ Analgesics: increased risk of haematological toxicity when zidovudine given with **NSAIDs**; plasma concentration of zidovudine possibly increased by **METHADONE**
- ▶ Antibacterials: absorption of zidovudine reduced by **CLARITHROMYCIN** tablets (give at least 2 hours apart); manufacturer of zidovudine advises avoid concomitant use with **RIFAMPICIN**
- ▶ Antiepileptics: zidovudine increases or decreases plasma concentration of **FOSPHENYTOIN** and **PHENYTOIN**; plasma concentration of zidovudine possibly increased by **SODIUM VALPROATE** and **VALPROIC ACID** (increased risk of toxicity)
- Antifungals: plasma concentration of zidovudine increased by ● **FLUCONAZOLE** (increased risk of toxicity)
- ▶ Antimalarials: increased antifolate effect when zidovudine given with **PYRIMETHAMINE**
- Antivirals: profound myelosuppression when zidovudine given with ● **GANCICLOVIR** or ● **VALGANCICLOVIR** (if possible avoid concomitant administration, particularly during initial ganciclovir or valganciclovir therapy); increased risk of granulocytopenia when zidovudine given with ● **NEVIRAPINE**; increased risk of anaemia when zidovudine given with ● **RIBAVIRIN**—avoid concomitant use; zidovudine possibly inhibits effects of ● **STAVUDINE** (manufacturers advise avoid concomitant use); plasma concentration of zidovudine reduced by ● **TIPRANAVIR**
- ▶ Atovaquone: plasma concentration of zidovudine increased by **ATOVAQUONE** (increased risk of toxicity)
- ▶ Netupitant: caution with zidovudine advised by manufacturer of **NETUPITANT**
- Orlistat: absorption of zidovudine possibly reduced by ● **ORLISTAT**

### Zinc

- ▶ Antibacterials: zinc reduces absorption of **CIPROFLOXACIN**, **LEVOFLOXACIN**, **NORFLOXACIN** and **OFLOXACIN** (give at least 2 hours apart); zinc reduces absorption of **MOXIFLOXACIN** (give at least 6 hours apart); zinc possibly reduces absorption of **TETRACYCLINES** (give at least 2 to 3 hours apart)
- ▶ Calcium Salts: absorption of zinc reduced by **CALCIUM SALTS**
- ▶ Eltrombopag: zinc possibly reduces absorption of **ELTROMBOPAG** (give at least 4 hours apart)
- ▶ Iron Salts: absorption of zinc reduced by *oral* **IRON SALTS**, also absorption of *oral* iron salts reduced by zinc
- ▶ Penicillamine: absorption of zinc reduced by **PENICILLAMINE**, also absorption of penicillamine reduced by zinc
- ▶ Trientine: absorption of zinc reduced by **TRIENTINE**, also absorption of trientine reduced by zinc

**Zoledronic Acid** see Bisphosphonates

**Zolmitriptan** see 5HT<sub>1</sub>-receptor Agonists (under HT)

**Zolpidem** see Anxiolytics and Hypnotics

### Zonisamide

- Antidepressants: anticonvulsant effect of antiepileptics possibly antagonised by **MAOIs** and ● **TRICYCLIC-RELATED ANTIDEPRESSANTS** (convulsive threshold lowered); anticonvulsant effect of antiepileptics antagonised by ● **SSRIS** and ● **TRICYCLICS** (convulsive threshold lowered)
- ▶ Antiepileptics: plasma concentration of zonisamide reduced by **CARBAMAZEPINE**, **FOSPHENYTOIN**, **PHENOBARBITAL**, **PHENYTOIN** and **PRIMIDONE**
- Antimalarials: anticonvulsant effect of antiepileptics antagonised by ● **MEFLOQUINE**
- Antipsychotics: anticonvulsant effect of antiepileptics antagonised by ● **ANTIPSYCHOTICS** (convulsive threshold lowered)
- ▶ Diuretics: manufacturer of zonisamide advises avoid concomitant use with **CARBONIC ANHYDRASE INHIBITORS** in children
- Orlistat: possible increased risk of convulsions when antiepileptics given with ● **ORLISTAT**

**Zopiclone** see Anxiolytics and Hypnotics

**Zuclopenthixol** see Antipsychotics

# Appendix 2

## Borderline substances

### CONTENTS

|  |      |      |   |      |      |

| Specialised formulas for specific clinical conditions              |      | 1361 | Hyperlysinemia  |      | 1377 |
| <b>Feed supplements</b>  |      | 1363 | Isovaleric acidemia                                   |      | 1377 |
| High-energy supplements  |      | 1363 | Maple syrup urine disease                             |      | 1377 |
| Fibre, vitamin, and mineral supplements                            |      | 1367 | Methylmalonic or propionic acidemia                   |      | 1378 |
| <b>Feed additives</b>  |      | 1369 | Other inborn errors of metabolism                     |      | 1379 |
| Special additives for conditions of intolerance                    |      | 1369 | Phenylketonuria                                       |      | 1379 |
|  |      |      | Tyrosinaemia  |      | 1382 |

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

### Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

### Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. The clinical condition for which the product has been approved is included with each entry.

**Note** Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

### Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table,

below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins**, **minerals**, and **trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.

**Note** Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

### Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

### Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

#### Birthmarks

#### Dermatitis

#### Eczema and Pruritus

*Aveeno*<sup>®</sup> Bath Oil; *Aveeno*<sup>®</sup> Cream; *Aveeno*<sup>®</sup> Lotion; *E45*<sup>®</sup> Emollient Bath Oil; *E45*<sup>®</sup> Emollient Wash Cream; *E45*<sup>®</sup> Lotion

#### Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)

*Covermark*<sup>®</sup> classic foundation and finishing powder; *Dermablend*<sup>®</sup> Ultra corrective foundation; *Dermacolor*<sup>®</sup> Camouflage cream and fixing powder; *Keromask*<sup>®</sup> masking cream and finishing powder; *Veil*<sup>®</sup> Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

#### Disinfectants (antiseptics)

May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for

the treatment of patients, but not for general hygienic purposes.

**Dry mouth (xerostomia)**

For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome.

*AS Saliva Orthana*<sup>®</sup>; *Biotène Oralbalance*<sup>®</sup>; *BioXtra*<sup>®</sup>;

*Glandosane*<sup>®</sup>; *Saliveze*<sup>®</sup>

**Photodermatoses (skin protection in)**

*Anthelios*<sup>®</sup> XL SPF 50+ Melt-in cream; *Sunsense*<sup>®</sup> Ultra;

*Uvistat*<sup>®</sup> Lipscreen SPF 50, *Uvistat*<sup>®</sup> Suncream SPF 30 and 50

**Standard ACBS indications:** Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

**Table 1 Enteral feeds (non-disease specific)**

Less than 5 g protein/100 mL

**Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL**

Not suitable for use in child under 1 year unless otherwise stated; not recommended for child 1-6 years

| Product   | Formulation                                | Energy               | Protein                          | Carbohydrate              | Fat    | Fibre  | Special Characteristics   | ACBS Indications  | Presentation & Flavour   |

## Feed additives

### Special additives for conditions of intolerance

#### Colief®

- ▶ For the relief of symptoms associated with lactose intolerance in infants, provided that lactose intolerance is confirmed by the presence of reducing substances and/or excessive acid in stools, a low concentration of the corresponding disaccharide enzyme on intestinal biopsy or by breath hydrogen test or lactose intolerance test. For dosage and administration details, consult product literature.

LIQUID, lactase 50 000 units/g

**Colief 50,000units/g infant drops** (Forum Health Products Ltd)  
7 ml (ACBS) · NHS indicative price = £8.40

#### Fructose

- ▶ (Laevulose) For proven glucose/galactose intolerance

#### Glucose

- ▶ (Dextrose monohydrate) For use as an energy supplement in sucrose-isomaltase deficiency

#### VSL#3®

- ▶ Nutritional supplement for use under the supervision of a physician, for the maintenance or remission of ileoanal pouchitis induced by antibacterials in adults. For dosage and administration details, consult product literature.
- POWDER, containing 8 strains of live, freeze-dried, lactic acid bacteria. Contains traces of soya, gluten, and lactose.

**VSL#3 Probiotic Food Supplement oral powder 4.4g sachets** (Ferring Pharmaceuticals Ltd)

30 sachet (ACBS) · NHS indicative price = £34.36

### Feed thickeners and pre-thickened drinks

#### Carobel, Instant®

- ▶ For thickening feeds in the treatment of vomiting.
- POWDER, carob seed flour.

**Instant Carobel powder** (Cow & Gate Ltd)

135 gram (ACBS) · NHS indicative price = £2.84

#### Multi-thick®

- ▶ For thickening of liquids and foods in dysphagia. Not suitable for children under 1 year except in cases of failure to thrive.
- POWDER, modified maize starch, gluten- and lactose-free.

**Multi-thick powder** (Abbott Laboratories Ltd)

250 gram (ACBS) · NHS indicative price = £4.83

#### Nutillis® Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 3 years.
- POWDER, maltodextrin, xanthan gum, guar gum, gluten- and lactose-free.

**Nutillis Clear powder** (Nutricia Ltd)

72 gram (ACBS) · NHS indicative price = £11.04 | 175 gram (ACBS) · NHS indicative price = £8.46

#### Nutillis® Powder

- ▶ For thickening of foods in dysphagia. Not suitable for child under 3 years.
- POWDER, carbohydrate 86 g, energy 1520 kJ (358 kcal)/100 g, modified maize starch, gluten- and lactose-free.

**Nutillis powder** (Nutricia Ltd)

240 gram (ACBS) · NHS indicative price = £6.60 | 300 gram (ACBS) · NHS indicative price = £5.01

#### Resource® Thickened Drink

- ▶ For dysphagia. Not suitable for children under 1 year.
- LIQUID, carbohydrate 22 g, energy: orange 382 kJ (90 kcal); apple 376 kJ (89 kcal)/100 mL. Gluten- and lactose-free.

**Resource Thickened Drink custard apple** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.73

**Resource Thickened Drink custard orange** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.73

**Resource Thickened Drink syrup apple** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.73

**Resource Thickened Drink syrup orange** (Nestle Health Science)

114 ml (ACBS) · NHS indicative price = £0.73

#### Resource® ThickUp Clear

- ▶ For thickening of liquids or foods in dysphagia. Not suitable for children under 5 years.
- POWDER, maltodextrin, xanthan gum, gluten- and lactose-free.

**Resource ThickUp Clear powder** (Nestle Health Science)

28.8 gram (ACBS) · NHS indicative price = £5.28 | 125 gram (ACBS) · NHS indicative price = £8.46

#### Resource® ThickUp®

- ▶ For thickening of foods in dysphagia. Not suitable for children under 1 year.
- POWDER, modified maize starch. Gluten- and lactose-free.

**Resource ThickenUp powder** (Nestle Health Science)

227 gram (ACBS) · NHS indicative price = £4.66 | 337.5 gram (ACBS) · NHS indicative price = £17.86

#### SLO Drinks®

- ▶ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

**SLO Drink 1 oral powder lemon** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 1 oral powder orange** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 1 oral powder hot chocolate** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 1 oral powder white coffee** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 1 oral powder white tea** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 2 oral powder hot chocolate** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 2 oral powder lemon** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 2 oral powder orange** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 2 oral powder white tea** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

**SLO Drink 3 oral powder orange** (SLO Drinks Ltd)

25 cup (ACBS) · NHS indicative price = £7.50

#### SLO Milkshakes®

- ▶ Nutritional supplement in the dietary management of dysphagia. Not suitable for children under 3 years.
- POWDER, carbohydrate content varies with flavour and chosen consistency (2 consistencies available) see product literature.

**SLO Milkshake+ 1 oral powder chocolate** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

**SLO Milkshake+ 1 oral powder strawberry** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

**SLO Milkshake+ 2 oral powder chocolate** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

**SLO Milkshake+ 2 oral powder strawberry** (SLO Drinks Ltd)

7 × 50 gram (ACBS) · NHS indicative price = £5.88

#### Thick and Easy®

**IVA Maxamaid powder** (Nutricia Ltd)  
500 gram (ACBS) · NHS indicative price = £99.61

## Maple syrup urine disease

**MSUD Aid III<sup>®</sup>**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease and related conditions in children and adults where it is necessary to limit the intake of branched chain amino acids. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**MSUD Aid 111 powder** (Nutricia Ltd)  
500 gram (ACBS) · NHS indicative price = £188.69

**MSUD Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven maple syrup urine disease in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**MSUD Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £39.45

**MSUD Anamix® Junior**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 474 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

**MSUD Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years. LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**MSUD Anamix Junior LQ liquid** (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £9.15

**MSUD cooler® 15**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130-mL pouch, with vitamins, minerals, and trace elements.

**MSUD orange cooler 15 liquid** (VitaFlo International Ltd)

130 ml (ACBS) · NHS indicative price = £11.21

**MSUD red cooler 15 liquid** (VitaFlo International Ltd)

130 ml (ACBS) · NHS indicative price = £11.21

**MSUD express® 15**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 15 g, carbohydrate 3.8 g, fat less than 100 mg, energy 315 kJ (75 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1370.

**MSUD express 15 oral powder 25g sachets** (VitaFlo International Ltd)

30 sachet (ACBS) · NHS indicative price = £329.89

**MSUD express® 20**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1370.

**MSUD express 20 oral powder 34g sachets** (VitaFlo International Ltd)

30 sachet (ACBS) · NHS indicative price = £426.21

**MSUD Gel®**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children 1–10 years. POWDER, protein equivalent (essential and non-essential amino acids except leucine, isoleucine, and valine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1370.

**MSUD gel 24g sachets** (VitaFlo International Ltd)

30 sachet (ACBS) · NHS indicative price = £214.88

**MSUD Lophlex® LQ 20**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease in children over 3 years. LIQUID, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

**MSUD Lophlex LQ 20 liquid** (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £16.27

**MSUD Maxamaid®**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**MSUD Maxamaid powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £99.61

**MSUD Maxamum®**

- ▶ Nutritional supplement for the dietary management of maple syrup urine disease. POWDER, protein equivalent (essential and non-essential amino acids except isoleucine, leucine, and valine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamum products are generally intended for use in children over 8 years.

**MSUD Maxamum powder orange** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £159.66

**MSUD Maxamum powder unflavoured** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £159.66

**Methylmalonic or propionic acidaemia****MMA/PA Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven methylmalonic acidaemia or propionic acidaemia in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**MMA / PA Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £39.45

**XMTVI Asadon®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia in children and adults. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XMTVI Asadon powder** (Nutricia Ltd)

200 gram (ACBS) · NHS indicative price = £75.47

**MMA/PA Maxamaid®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia. POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements. Maxamaid products are generally intended for use in children 1–8 years.

**MMA/PA Maxamaid powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £99.61

**MMA/PA Maxamum®**

- ▶ Nutritional supplement for the dietary management of methylmalonic acidaemia or propionic acidaemia.

POWDER, protein equivalent (essential and non-essential amino acids except methionine, threonine, and valine, and low isoleucine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements. Maximum products are generally intended for use in children over 8 years.

**MMA/PA Maxamum powder** (Nutricia Ltd)  
500 gram (ACBS) · NHS indicative price = £159.66

## Other inborn errors of metabolism

### Cystine500<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, cystine 500 mg, carbohydrate 3.3 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Cystine500 oral powder 4 g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £55.00

### DocOmega<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism for adults and children from birth.  
POWDER, protein (cows' milk, soya) 100 mg, carbohydrate 3.2 g, fat 500 mg (of which docosahexaenoic acid 200 mg), fibre nil, energy 74 kJ (18 kcal)/4 g, with minerals

**DocOmega oral powder 4g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £39.06

### EA<sup>®</sup> Supplement

- ▶ Nutritional supplement for the dietary management of disorders of protein metabolism including urea cycle disorders in children over 3 years.  
POWDER, protein equivalent (essential amino acids) 5 g, carbohydrate 4 g, fat nil, energy 151 kJ (36 kcal)/12.5 g, with vitamins, minerals, and trace elements.

**EA Supplement oral powder 12.5g sachets** (Vitaflo International Ltd)  
50 sachet (ACBS) · NHS indicative price = £203.64

### Isoleucine50<sup>®</sup>

- ▶ Nutritional supplement for use in the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, isoleucine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Isoleucine50 oral powder 4g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £53.97

### KeyOmega<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of metabolism.  
POWDER, protein (cows' milk, soya) 170 mg, carbohydrate 2.8 g, fat 800 mg (of which arachidonic acid 200 mg, docosahexaenoic acid 100 mg), energy 80 kJ (19 kcal)/4 g.

**KeyOmega oral powder 4g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £39.94

### Leucine100<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, leucine 100 mg, carbohydrate 3.7 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Leucine100 oral powder sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £53.97

### Low protein drink

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children over 1 year.

POWDER, protein (cows' milk) 4.5 g (phenylalanine 100 mg), carbohydrate 59.5 g, fat 29.9 g, fibre nil, energy 2194 kJ (528 kcal)/100 g, with vitamins, minerals, and trace elements. Contains lactose.

Termed *Milupa<sup>®</sup> lp-drink* by manufacturer.

**Milupa LP drink** (Nutricia Ltd)  
400 gram (ACBS) · NHS indicative price = £9.36

### Phenylalanine50<sup>®</sup>

- ▶ Nutritional supplement for use in the dietary management of inborn errors of metabolism in adults and children from birth.  
POWDER, phenylalanine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Phenylalanine50 oral powder sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £52.40

### ProZero<sup>®</sup>

- ▶ A protein-free nutritional supplement for the dietary management of inborn errors of metabolism in children over 6 months and adults.  
LIQUID, carbohydrate 8.1 g (of which sugars 3.5 g), fat 3.8 g, energy 278 kJ (66 kcal)/100 mL. Contains lactose.

**ProZero liquid** (Vitaflo International Ltd)  
250 ml (ACBS) · NHS indicative price = £1.44 | 1000 ml (ACBS) · NHS indicative price = £5.75

### Tyrosine1000<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, tyrosine 1 g, carbohydrate 2.9 g, fat nil, energy 63 kJ (15 kcal)/4-g sachet.

**Tyrosine1000 oral powder 4g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £4.95

### Valine50<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of inborn errors of amino acid metabolism in adults and children from birth.

POWDER, valine 50 mg, carbohydrate 3.8 g, fat nil, energy 63 kJ (15 kcal)/4 g

**Valine50 oral powder 4g sachets** (Vitaflo International Ltd)  
30 sachet (ACBS) · NHS indicative price = £53.97

## Phenylketonuria

### Add-Ins<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 4 years.  
POWDER, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate nil, fat 5.1 g, energy 359 kJ (86 kcal)/18.2-g sachet, with vitamins, minerals, and trace elements.

**Add Ins oral powder 18.2g sachets** (Nutricia Ltd)  
60 sachet (ACBS) · NHS indicative price = £381.00

### Easiphen<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years.  
LIQUID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 6.7 g, carbohydrate 5.1 g, fat 2 g, energy 275 kJ (65 kcal)/100 mL with vitamins, minerals, and trace elements.

**Easiphen liquid** (Nutricia Ltd)  
250 ml (ACBS) · NHS indicative price = £9.79

### L-Tyrosine

- ▶ Nutritional supplement for the dietary management of phenylketonuria in pregnant women with low plasma tyrosine concentrations.

POWDER, L-tyrosine 20 g, carbohydrate 76.8 g, fat nil, energy 1612 kJ (379 kcal)/100 g.

**L-Tyrosine powder** (Nutricia Ltd)  
100 gram (ACBS) · NHS indicative price = £22.22

### Lophlex<sup>®</sup>

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children over 8 years and adults including pregnant women.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 2.5 g, fat 60 mg, fibre 220 mg, energy 385 kJ (91 kcal)/27.8-g sachet, with vitamins, minerals, and trace elements.

**Lophlex powder 27.8g sachets berry** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £294.00

**Lophlex powder 27.8g sachets orange** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £294.00

**Lophlex powder 27.8g sachets unflavoured** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £294.00

**Loprofin® PKU Drink**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 1 year and adults. LIQUID, protein (cows' milk) 400 mg (phenylalanine 10 mg), lactose 9.4 g, fat 2 g, energy 165 kJ (65 kcal)/100 mL.

**Loprofin PKU drink** (Nutricia Ltd)  
200 ml (ACBS) · NHS indicative price = £0.76

**Loprofin® Sno-Pro**

- ▶ Nutritional supplement for the dietary management of phenylketonuria, chronic renal failure and other inborn errors of amino acid metabolism.

LIQUID, protein (cows' milk) 220 mg (phenylalanine 12.5 mg), carbohydrate 8 g, fat 3.8 g, energy 273 kJ (65 kcal)/100 mL. Contains lactose.

**Loprofin SNO-PRO drink** (Nutricia Ltd)  
200 ml (ACBS) · NHS indicative price = £1.27

**Phlexy-10® Exchange System**

- ▶ Nutritional supplement for the dietary management of phenylketonuria.

CAPSULES, protein equivalent (essential and non-essential amino acids except phenylalanine) 416.5 mg/capsule.

**Phlexy-10 500mg capsules** (Nutricia Ltd)  
200 capsule (ACBS) · NHS indicative price = £44.00

TABLETS, protein equivalent (essential and non-essential amino acids except phenylalanine) 833 mg tablet.

**Phlexy-10 tablets** (Nutricia Ltd)  
75 tablet (ACBS) · NHS indicative price = £28.50

DRINK MIX, powder, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.33 g, carbohydrate 8.8 g/20-g sachet.

**Phlexy-10 drink mix apple & blackcurrant** (Nutricia Ltd)  
600 gram (ACBS) · NHS indicative price = £130.20

**Phlexy-10 drink mix citrus burst** (Nutricia Ltd)  
600 gram (ACBS) · NHS indicative price = £130.20

**Phlexy-10 drink mix tropical surprise** (Nutricia Ltd)  
600 gram (ACBS) · NHS indicative price = £130.20

**Phlexy-Vits®**

- ▶ For use as a vitamin and mineral component of restricted therapeutic diets in children over 11 years and adults with phenylketonuria and similar amino acid abnormalities.

POWDER, vitamins, minerals, and trace elements

**Phlexy-Vits powder** (Nutricia Ltd)  
210 gram (ACBS) · NHS indicative price = £72.30

TABLETS, vitamins, minerals, and trace elements

**Phlexy-Vits tablets** (Nutricia Ltd)  
180 tablet (ACBS) · NHS indicative price = £82.80

**PK Aid 4®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children and adults.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 79 g, carbohydrate 4.5 g, fat nil, energy 1420 kJ (334 kcal)/100 g.

**PK Aid 4 powder** (Nutricia Ltd)  
500 gram (ACBS) · NHS indicative price = £145.04

**PKU Anamix Junior LQ®**  
LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**PKU Anamix Junior LQ liquid berry** (Nutricia Ltd)  
125 ml (ACBS) · NHS indicative price = £5.69

**PKU Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven phenylketonuria in children from birth to 3 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL

**PKU Anamix Infant powder** (Nutricia Ltd)  
400 gram (ACBS) · NHS indicative price = £35.86

**PKU Anamix® Junior**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.

POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 8.4 g, carbohydrate 9.9 g, fat 3.9 g, energy 455 kJ (108 kcal)/29-g sachet, with vitamins, minerals, and trace elements

**PKU Anamix Junior powder chocolate** (Nutricia Ltd)  
1080 gram (ACBS) · NHS indicative price = £128.10

**PKU Anamix Junior powder neutral** (Nutricia Ltd)  
1080 gram (ACBS) · NHS indicative price = £128.10

**PKU Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–10 years.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 497 kJ (118 kcal)/125 mL, with vitamins, minerals, and trace elements. Lactose-free.

**PKU Anamix Junior LQ liquid berry** (Nutricia Ltd)  
125 ml (ACBS) · NHS indicative price = £5.69

**PKU Anamix Junior LQ liquid orange** (Nutricia Ltd)  
125 ml (ACBS) · NHS indicative price = £5.69

**PKU cooler10®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 3 years.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 5.1 g, energy 258 kJ (62 kcal)/87-mL pouch, with vitamins, minerals, and trace elements.

**PKU orange cooler 10 liquid** (Vitafo International Ltd)  
87 ml (ACBS) · NHS indicative price = £4.56

**PKU purple cooler 10 liquid** (Vitafo International Ltd)  
87 ml (ACBS) · NHS indicative price = £4.56

**PKU red cooler 10 liquid** (Vitafo International Ltd)  
87 ml (ACBS) · NHS indicative price = £4.56

**PKU white cooler 10 liquid** (Vitafo International Ltd)  
87 ml (ACBS) · NHS indicative price = £4.56

**PKU cooler15®**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 3 years.
- LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 15 g, carbohydrate 7.8 g, energy 386 kJ (92 kcal)/130-mL pouch, with vitamins, minerals, and trace elements.

**PKU orange cooler 15 liquid** (Vitafo International Ltd)  
130 ml (ACBS) · NHS indicative price = £6.80

125 ml (ACBS) · NHS indicative price = £10.47

**PKU Lophlex LQ 20 liquid orange** (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £10.47

**PKU Lophlex<sup>®</sup> Sensation 20**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 4 years and adults including pregnant women. SEMI-SOLID, protein equivalent (containing essential and non-essential amino acids except phenylalanine) 20 g, carbohydrate 20.2 g, fibre 1 g, energy 706 kJ (166 kcal)/109 g, with vitamins, minerals, and trace elements.

**PKU Lophlex Sensation 20 berries** (Nutricia Ltd)

327 gram (ACBS) · NHS indicative price = £33.45

**PKU Lophlex Sensation 20 orange** (Nutricia Ltd)

327 gram (ACBS) · NHS indicative price = £33.45

**PKU squeeze<sup>®</sup>**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children from 6 months to 10 years. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine) 10 g, carbohydrate 22.5 g, fat 500 mg, energy 565 kJ (135 kcal)/85 g, with vitamins, minerals, and trace elements.

**PKU squeeze liquid** (Vitafo International Ltd)

2550 gram (ACBS) · NHS indicative price = £132.27

**PKU Maxamaid<sup>®</sup>**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children 1–8 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

**PKU Maxamaid powder orange** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £58.92

**PKU Maxamaid powder unflavoured** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £58.92

**PKU Maxamum<sup>®</sup>**

- ▶ Nutritional supplement for the dietary management of phenylketonuria in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine) 39 g, carbohydrate 34 g, fat less than 500 mg, energy 1260 kJ (297 kcal)/100 g, with vitamins, minerals, and trace elements.

**PKU Maxamum oral powder 50g sachets orange** (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £273.30

**PKU Maxamum oral powder 50g sachets unflavoured** (Nutricia Ltd)

30 sachet (ACBS) · NHS indicative price = £273.30

**PKU Maxamum powder orange** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £91.14

**PKU Maxamum powder unflavoured** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £91.14

## Tyrosinaemia

**Methionine-free TYR Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia type I in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 13.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix Infant methionine free powder** (Nutricia Ltd)  
400 gram (ACBS) · NHS indicative price = £39.45

**TYR Anamix® Infant**

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia where plasma-methionine concentrations are normal in children from birth to 3 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 15.1 g, carbohydrate 49.5 g, fat 23 g, fibre 5.3 g, energy 1915 kJ (457 kcal)/100 g, with vitamins, minerals, and trace elements; standard dilution (15%) provides protein equivalent 2 g, carbohydrate 7.4 g, fat 3.5 g, fibre 800 mg, energy 287 kJ (69 kcal)/100 mL.

**TYR Anamix Infant methionine free powder** (Nutricia Ltd)  
400 gram (ACBS) · NHS indicative price = £39.45

**TYR Anamix Infant powder** (Nutricia Ltd)

400 gram (ACBS) · NHS indicative price = £39.45

**TYR Anamix® Junior**

- ▶ Nutritional supplement for the dietary management of proven tyrosinaemia in children 1–10 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 8.4 g, carbohydrate 11 g, fat 3.9 g, energy 475 kJ (113 kcal)/29-g sachet, with vitamins, minerals, and trace elements.

**TYR Anamix Junior oral powder 29g sachets** (Nutricia Ltd)  
30 sachet (ACBS) · NHS indicative price = £206.40

**TYR Anamix® Junior LQ**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type I (when nitisinone (NTBC) is used, see nitisinone p. 938), type II, and type III, in children over 1 year. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 10 g, carbohydrate 8.8 g, fat 4.8 g, fibre 310 mg, energy 500 kJ (119 kcal)/125 mL, with vitamins, minerals and trace elements.

**TYR Anamix Junior LQ liquid** (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £9.15

**TYR cooler® 15**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 7 g, fat 500 mg, energy 393 kJ (92 kcal)/130 mL, with vitamins, minerals, and trace elements.

**TYR orange cooler 15 liquid** (Vitaflor International Ltd)

130 ml (ACBS) · NHS indicative price = £11.21

**TYR red cooler 10 liquid** (Vitaflor International Ltd)

87 ml (ACBS) · NHS indicative price = £7.18

**TYR red cooler 15 liquid** (Vitaflor International Ltd)

130 ml (ACBS) · NHS indicative price = £11.21

**TYR red cooler 20 liquid** (Vitaflor International Ltd)

174 ml (ACBS) · NHS indicative price = £15.00

**TYR express15®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years and adults. POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 15 g, carbohydrate 3.4 g, fat less than 100 mg, energy 310 kJ (74 kcal)/25 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1370.

**TYR express 15 oral powder 25g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £329.89

**TYR express20®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 8 years. POWDER, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 20 g, carbohydrate 4.7 g, fat less than 100 mg, energy 416 kJ (99 kcal)/34 g, with vitamins, minerals, and trace elements. To flavour unflavoured products, see FlavourPac p. 1370.

**TYR express 20 oral powder 34g sachets** (Vitaflor International Ltd)  
30 sachet (ACBS) · NHS indicative price = £426.21

**TYR Gel®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–10 years. GEL, protein equivalent (essential and non-essential amino acids except tyrosine and phenylalanine) 10 g, carbohydrate 10.3 g, fat less than 100 mg, energy 339 kJ (81 kcal)/24 g, with vitamins, minerals and trace elements. To flavour unflavoured products, see FlavourPac p. 1370.

**TYR gel oral powder 24g sachets** (Vitaflor International Ltd)

30 sachet (ACBS) · NHS indicative price = £212.38

**TYR Lophlex® LQ 20**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children over 3 years and adults. LIQUID, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 20 g, carbohydrate 8.8 g, fat less than 500 mg, fibre 500 mg, energy 509 kJ (120 kcal)/125 mL, with vitamins, minerals, and trace elements.

**TYR Lophlex LQ 20 liquid** (Nutricia Ltd)

125 ml (ACBS) · NHS indicative price = £16.27

**TYR Maxamaid®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia in children 1–8 years. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 25 g, carbohydrate 51 g, fat less than 500 mg, energy 1311 kJ (309 kcal)/100 g, with vitamins, minerals, and trace elements.

**TYR Maxamaid powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £99.61

**XPHEN TYR Tyrosidon®**

- ▶ Nutritional supplement for the management of tyrosinaemia in children and adults where plasma-methionine concentrations are normal. POWDER, protein equivalent (essential and non-essential amino acids except phenylalanine and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XPHEN TYR Tyrosidon Free AA Mix powder** (Nutricia Ltd)

500 gram (ACBS) · NHS indicative price = £188.69

**XPTM Tyrosidon®**

- ▶ Nutritional supplement for the dietary management of tyrosinaemia type I in children and adults where plasma-methionine concentrations are above normal. POWDER, protein equivalent (essential and non-essential amino acids except methionine, phenylalanine, and tyrosine) 77 g, carbohydrate 4.5 g, fat nil, energy 1386 kJ (326 kcal)/100 g.

**XPTM Tyrosidon powder** (Nutricia Ltd)

500 gram · NHS indicative price = £91.31

# Appendix 3

## Cautionary and advisory labels for dispensed medicines

### Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

### Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

### Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard... days after opening' and 'Do not use after...', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

### Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification. If changes are made to suit computer requirements, care should be taken to retain the sense of the original.

### Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label. These appear directly under the English label.

### Labels

#### 1 Warning: This medicine may make you sleepy

**Rhybudd:** Gall y feddyginiath hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

#### 2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

**Rhybudd:** Gall y feddyginiath hon eich gwneud yn gysglyd. Peidiwch â gyrro, defnyddio offer law neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. *It is an offence to drive while under the influence of drink or drugs.*

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking

the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 5). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient's doctor.

Side-effects unrelated to drowsiness that may affect a patient's ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

- 3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines**

**Rhybudd:** Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrddio, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

- 4 Warning: Do not drink alcohol**

**Rhybudd:** Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken (e.g. metronidazole)*. Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

- 5 Do not take indigestion remedies 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used with label 25 on *preparations coated to resist gastric acid (e.g. enteric-coated tablets)*. This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon**

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

- 7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine**

**Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaeth sy'n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon**

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc*, and are thus less available for

absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

- 8 Warning: Do not stop taking this medicine unless your doctor tells you to stop**

**Rhybudd:** Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthyh am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit (e.g. antituberculous drugs)*.

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard (e.g. clonidine for hypertension)*. Label 10 (see below) is more appropriate for corticosteroids.

- 9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop**

**Gadewch yr un faint o amser rhwng pob dŵs yn ystod y dydd.**

**Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi'i orffen, oni bai eich bod yn cael cyngor i stopio**

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

- 10 Warning: Read the additional information given with this medicine**

**Rhybudd:** Darllenwch y wybodaeth ychwanegol gyda'r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

- 11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds**

**Diogelwch eich croen rhag golau'r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul**

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Many drugs other than those listed in Appendix 3 (e.g. phenothiazines and sulfonamides) may, on rare occasions, cause reactions in susceptible patients. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

- 12 Do not take anything containing aspirin while taking this medicine**

**Peidiwch â chymryd unrhyw beth sy'n cynnwys aspirin gyda'r feddyginiaeth hon**

To be used on *preparations containing sulfapyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

- 13 Dissolve or mix with water before taking**

**Gadewch i ddiwedd mewn dŵr cyn ei gymryd**

To be used on *preparations that are intended to be dissolved in water (e.g. soluble tablets) or mixed with water (e.g. powders, granules) before use*. In a few cases other liquids such as fruit juice or milk may be used.

- 14** This medicine may colour your urine. This is harmless  
 Gall y feddyginiaeth hon lliwio eich dŵr. Nid yw hyn yn arwydd o ddrwg  
 To be used on *preparations that may cause the patient's urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine  
 Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau  
 To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame*.
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening  
 Rhochwch y dabled i doddni dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagar  
 To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.
- 17** Do not take more than... in 24 hours  
 Peidiwch â chymryd mwy na... mewn 24 awr  
 To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.  
 It may also be used on preparations for which no dose has been specified by the prescriber.
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week  
 Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos  
 To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol  
 Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol  
 To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) for *anxiolytics prescribed to be taken at night*.  
 It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.
- 21** Take with or just after food, or a meal  
 Cymerwch gyda neu ar ôl bwyd  
 To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*.  
 Patients should be advised that a *small amount of food is sufficient*.
- 22** Take 30 to 60 minutes before food  
 Cymerwch 30 i 60 munud cyn bwyd  
 To be used on some preparations *whose absorption is thereby improved*.  
 Most oral antibacterials require label 23 instead (see below).
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food  
 Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd  
 To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.
- 24** Suck or chew this medicine  
 Bydd angen cnoi neu sugno'r feddyginiaeth hon  
 To be used on *preparations that should be sucked or chewed*.  
 The pharmacist should use discretion as to which of these words is appropriate.
- 25** Swallow this medicine whole. Do not chew or crush  
 Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân  
 To be used on *preparations that are enteric-coated or designed for modified-release*.  
 Also to be used on *preparations that taste very unpleasant or may damage the mouth if not swallowed whole*.  
 Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.
- 26** Dissolve this medicine under your tongue  
 Gadewch i'r feddyginiaeth hon doddni o dan y tafod  
 To be used on *preparations designed for sublingual use*.  
 Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.
- 27** Take with a full glass of water  
 Cymerwch gyda llond gwyrdr o ddŵr  
 To be used on *preparations that should be well diluted* (e.g. chloral hydrate), *where a high fluid intake is required* (e.g. sulfonamides), *or where water is required to aid the action* (e.g. methylcellulose). The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.
- 28** Spread thinly on the affected skin only  
 Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig  
 To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours  
 Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr  
 To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.  
 This label has been introduced because of the serious consequences of overdosage with paracetamol.
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well  
 Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn  
 To be used on all containers of dispensed *preparations containing paracetamol*.
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine  
 Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon  
 To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see *Buyers' Guide: Advanced wound dressings* (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

### Basic wound contact dressings

#### Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings.

## Wound contact material for different types of wounds

| Wound PINK (epithelialising)  |   |  |
|---|---|--|
| <b>Low Exudate</b>  | <b>Moderate Exudate</b>   |  |
| Low adherence p. 1386<br>Vapour-permeable film p. 1390<br>Soft polymer p. 1392<br>Hydrocolloid p. 1393  | Soft ploymer p. 1392<br>Foam, low absorbent p. 1394<br>Alginate p. 1396   |  |

| <b>Note</b> In each section of this table the dressings are listed in order of increasing absorbency. Some wound contact (primary) dressings require a secondary dressing                     |   |  |

Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet<sup>®</sup>) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

### Knitted polyester primary dressing

#### Atrauman

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

**Atrauman dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.63, 20cm × 30cm= £1.74, 5cm × 5cm= £0.27, 7.5cm × 10cm= £0.28

### Knitted viscose primary dressing

#### N-A Dressing

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

#### N-A Ultra

Warp knitted fabric manufactured from a bright viscose monofilament.

**N-A Ultra dressing** (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.63, 9.5cm × 9.5cm= £0.33

#### Profore

Warp knitted fabric manufactured from a bright viscose monofilament.

**Profore** (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.32

#### Tricotex

Warp knitted fabric manufactured from a bright viscose monofilament.

**Tricotex dressing** (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.34

### Paraffin Gauze Dressing

#### Cuticell

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Cuticell** (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.29

#### Jelonet

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

**Jelonet dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.41

**Neotulle**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Neotulle** (Neomedic Ltd) dressing 10cm × 10cm= £0.29

**Paragauze**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Paragauze** (C D Medical Ltd) dressing 10cm × 10cm= £0.28

**Paranet**

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading  
**Paranet** (Synergy Health Plc) dressing 10cm × 10cm= £0.25

**Absorbent dressings**

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

*Absorbent cellulose dressing***CelluDress**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**CelluDress dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

**Eclipse**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Eclipse** (Advancis Medical) Boot dressing 60cm × 70cm= £13.78, dressing 15cm × 15cm= £0.97, 20cm × 30cm= £2.14, 60cm × 40cm= £8.15

**Exu-Dry**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Exu-Dry dressing** (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.14, 15cm × 23cm= £2.32, 23cm × 38cm= £5.40

**Mesorb**

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing  
**Mesorb dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £0.62, 10cm × 15cm= £0.81, 10cm × 20cm= £1.00, 15cm × 20cm= £1.43, 20cm × 25cm= £2.25, 20cm × 30cm= £2.55

**Telfa Max**

Absorbent Cellulose Dressing with Fluid Repellent Backing  
**Zetuvit E**  
 Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

**Zetuvit E** (Paul Hartmann Ltd) non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.14, 20cm × 40cm= £0.28, sterile dressing 10cm × 10cm= £0.21, 10cm × 20cm= £0.25, 20cm × 20cm= £0.39, 20cm × 40cm= £1.11

*Absorbent perforated dressing***Adpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Adpore dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

**Cosmopore E**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Cosmopor E dressing** (Paul Hartmann Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.56, 10cm × 35cm= £0.78, 5cm × 7.2cm= £0.08, 8cm × 10cm= £0.18, 8cm × 15cm= £0.28

**Cutiplast Steril**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Cutiplast Steril dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.31, 10cm × 25cm= £0.32, 10cm × 30cm= £0.43, 8cm × 10cm= £0.11, 8cm × 15cm= £0.25

**Leukomed**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Leukomed dressing** (BSN medical Ltd) 10cm × 20cm= £0.43, 10cm × 25cm= £0.49, 10cm × 30cm= £0.63, 10cm × 35cm= £0.72, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.18, 8cm × 15cm= £0.32

**Medipore + Pad**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Medipore + Pads dressing** (3M Health Care Ltd) 10cm × 10cm= £0.15, 10cm × 15cm= £0.25, 10cm × 20cm= £0.37, 10cm × 25cm= £0.46, 10cm × 35cm= £0.64, 5cm × 7.2cm= £0.07

**Medisafe**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Medisafe dressing** (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

**Mepore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Mepore dressing** (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.36, 7cm × 8cm= £0.11, 9cm × 20cm= £0.44, 9cm × 25cm= £0.61, 9cm × 30cm= £0.70, 9cm × 35cm= £0.76

**PremierPore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**PremierPore dressing** (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

**Primapore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Primapore dressing** (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.44, 10cm × 25cm= £0.50, 10cm × 30cm= £0.63, 10cm × 35cm= £0.97, 6cm × 8.3cm= £0.18, 8cm × 10cm= £0.19, 8cm × 15cm= £0.34

**Softpore**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Softpore dressing** (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

**Sterifix**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

**Telfa Island**

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.  
**Telfa Island dressing** (Aria Medical Ltd) 10cm × 12.5cm= £0.27, 10cm × 20cm= £0.35, 10cm × 25.5cm= £0.45, 10cm × 35cm= £0.62, 5cm × 10cm= £0.08

*Absorbent perforated plastic film faced dressing***Absopad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.  
**Absopad dressing** (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

**Askina Pad**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.  
**Askina** (B.Braun Medical Ltd) Pad dressing 10cm × 10cm= £0.21

**Cutisorb LA**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Interpose**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Melolin dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.28, 20cm × 10cm= £0.54, 5cm × 5cm= £0.17

**Skintact**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Skintact dressing** (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

**Solvaline N**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Solvaline N dressing** (Lohmann & Rauscher (UK) Ltd) 10cm × 10cm= £0.18, 20cm × 10cm= £0.36, 5cm × 5cm= £0.10

**Telfa**

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

**Telfa dressing** (Aria Medical Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

**Super absorbent cellulose and polymer primary dressing****Curea P1**

Super absorbent cellulose and polymer primary dressing.  
**Curea P1 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 10cm square= £2.15, 10cm × 20cm rectangular= £3.64, 10cm × 30cm rectangular= £5.20, 12cm × 12cm square= £2.65, 20cm × 20cm square= £6.89, 20cm × 30cm rectangular= £10.03, 7.5cm × 7.5cm square= £1.72

**Curea P2**

Super absorbent cellulose and polymer primary dressing (non-adherent)

**Curea P2 dressing** (Charles S. Bullen Stomacare Ltd) 10cm × 20cm square= £4.49, 11cm × 11cm square= £2.47, 20cm × 20cm square= £7.82, 20cm × 30cm rectangular= £10.60

**Cutisorb Ultra**

Super absorbent cellulose and polymer primary dressing  
**Cutisorb Ultra dressing** (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

**DryMax Extra**

Super absorbent cellulose and polymer primary dressing  
**DryMax Extra dressing** (Aspen Medical Europe Ltd) 10cm × 10cm square= £0.87, 10cm × 20cm rectangular= £1.04, 20cm × 20cm square= £1.84, 20cm × 30cm rectangular= £2.33

**ELECT Superabsorber**

Super absorbent cellulose and polymer primary dressing  
**ELECT Superabsorber dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £0.96, 10cm × 20cm rectangular= £1.13, 20cm × 20cm square= £2.01, 20cm × 30cm rectangular= £2.54

**Zetuvit Plus**

Super absorbent cellulose primary dressing  
**Zetuvit Plus dressing** (Paul Hartmann Ltd) 10cm × 10cm= £0.64, 10cm × 20cm= £0.88, 15cm × 20cm= £1.01, 20cm × 25cm= £1.38, 20cm × 40cm= £2.13

**Super absorbent hydroconductive dressing****Drawtex**

Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton

**Drawtex dressing** (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

**Advanced wound dressings**

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

**Hydrogel dressings**

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

**Hydrogel application (amorphous)****ActivHeal Hydrogel**

Hydrogel containing guar gum and propylene glycol  
**ActivHeal** (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.41

**Aquaform**

Hydrogel containing modified starch copolymer  
**AquaForm** (Aspen Medical Europe Ltd) Hydrogel dressing= £2.02

**Askina Gel**

Hydrogel containing modified starch and glycerol  
**Askina** (B.Braun Medical Ltd) Gel dressing= £2.01

**Cutimed**

Hydrogel  
**Cutimed** (BSN medical Ltd) Gel dressing= £3.02

**Flexigran**

Hydrogel containing modified starch and glycerol  
**Flexigran** (A1 Pharmaceuticals) Gel dressing= £1.90

**GranuGel**

Hydrogel containing carboxymethylcellulose, pectin and propylene glycol  
**GranuGEL** (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.35

**Intrasite Gel**

Hydrogel containing modified carmellose polymer and propylene glycol

**IntraSite** (Smith & Nephew Healthcare Ltd) Gel dressing= £3.63

**Nu-Gel**

Hydrogel containing alginate and propylene glycol  
**Nu-Gel** (Systagenix Wound Management Ltd) dressing= £2.09

**Purilon Gel**

Hydrogel containing carboxymethylcellulose and calcium alginate  
**Purilon** (Coloplast Ltd) Gel dressing= £2.30

**Hydrogel sheet dressings****ActiFormCool**

Hydrogel dressing  
**ActiFormCool sheet** (Activa Healthcare Ltd) 10cm × 10cm square= £2.66, 10cm × 15cm rectangular= £3.83, 20cm × 20cm square= £8.01, 5cm × 6.5cm rectangular= £1.81

**Aquafluo**

Hydrogel dressing  
**Aquafluo** (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

**Coolie**

Hydrogel dressing (without adhesive border)  
**Coolie** (Zeroderma Ltd) sheet 7cm discs= £1.96

**Gel FX**

Hydrogel dressing (without adhesive border)

**Gel FX sheet** (Synergy Health Plc) 10cm × 10cm square= £1.60, 5cm × 15cm square= £3.20**Geliperm**

Hydrogel sheets

**Geliperm** (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53**Hydrosorb**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film

**Hydrosorb sheet** (Paul Hartmann Ltd) 10cm × 10cm square= £2.26, 20cm × 20cm square= £6.77, 5cm × 7.5cm rectangular= £1.58**Hydrosorb Comfort**

Absorbent, transparent, hydrogel sheets containing polyurethane polymers covered with a semi-permeable film (with adhesive border, waterproof)

**Hydrosorb Comfort sheet** (Paul Hartmann Ltd) 12.5cm × 12.5cm square= £3.61, 4.5cm × 6.5cm rectangular= £1.87, 7.5cm × 10cm rectangular= £2.48**Intrasite Conformable**Soft non-woven dressing impregnated with Intrasite<sup>®</sup> gel**IntraSite Conformable dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.82, 10cm × 20cm rectangular= £2.46, 10cm × 40cm rectangular= £4.40**Novogel**

Glycerol-based hydrogel sheets (standard or thin)

**Novogel sheet** (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £2.89**SanoSkin NET**

Hydrogel sheet (without adhesive border)

**SanoSkin** (Ideal Medical Solutions Ltd) NET sheet 8.5cm × 12cm rectangular= £2.28**Vacunet**

Non-adherent, hydrogel coated polyester net dressing

**Vacunet dressing** (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86**Sodium hyaluronate dressings**

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.

**Hyiodine<sup>®</sup>** should be used with caution in thyroid disorders.**Hyiodine**

Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

**Hyiodine** (H & R Healthcare Ltd) dressing= £35.00**Vapour-permeable films and membranes**

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability. Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to

protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

*Non-woven fabric dressing with viscose-rayon pad.***Niko Fix**

For intravenous and subcutaneous catheter sites

**Niko** (Unomedical Ltd) Fix dressing 7cm × 8.5cm= £0.19*Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)*

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

**Soft polymer dressings**

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

**Cellulose dressings****Sorbion Sachet Border**

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border  
**Cutimed Sorbion Sachet Border dressing** (BSN medical Ltd) 10cm × 10cm square= £2.95, 15cm × 15cm square= £4.49, 25cm × 15cm rectangular= £6.99

Absorbent polymer dressing with non-adherent wound contact layer and adhesive border

**Flivasorb Adhesive dressing** (Lohmann & Rauscher (UK) Ltd) 12cm × 12cm square= £3.35, 15cm × 15cm square= £4.58

**Mepilex**

Absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex** (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.41, 15cm × 22cm= £6.22, XT dressing 10cm × 11cm= £2.66, 11cm × 20cm= £4.39, 15cm × 16cm= £4.82, 20cm × 21cm= £7.28, dressing 5cm × 5cm= £1.21

**Mepilex Border**

Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border** (Molnlycke Health Care Ltd) Heel dressing 18.5cm × 24cm= £6.63, Sacrum dressing 18cm × 18cm= £4.85, 23cm × 23cm= £7.91, dressing 10cm × 12.5cm= £2.72, 10cm × 20cm= £3.69, 10cm × 30cm= £5.55, 15cm × 17.5cm= £4.18, 17cm × 20cm= £6.07

**Mepilex Border Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border

**Mepilex Border Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £1.87, 15cm × 15cm= £3.94, 4cm × 5cm= £0.92, 5cm × 12.5cm= £2.01, 7.5cm × 7.5cm= £1.35

**Mepilex Lite**

Thin absorbent soft silicone dressing with polyurethane foam film backing

**Mepilex Lite dressing** (Molnlycke Health Care Ltd) 10cm × 10cm= £2.17, 15cm × 15cm= £4.22, 20cm × 50cm= £26.66, 6cm × 8.5cm= £1.82

**Mepilex Transfer**

Soft silicone exudate transfer dressing

**Mepilex Transfer dressing** (Molnlycke Health Care Ltd) 10cm × 12cm= £3.51, 15cm × 20cm= £10.64, 20cm × 50cm= £27.20, 7.5cm × 8.5cm= £2.23

**Sorbion Sana**

Non-adherent polyethylene wound contact dressing with absorbent core

**Cutimed Sorbion Sana Gentle dressing** (BSN medical Ltd) 12cm × 12cm= £2.49, 12cm × 22cm= £4.49, 22cm × 22cm= £7.99, 8.5cm × 8.5cm= £1.99

**Urgotul Duo**

Non-adherent soft polymer wound contact dressing with absorbent pad

**Urgotul Duo dressing** (Urgo Ltd) 10cm × 12cm= £3.87, 15cm × 20cm= £8.98, 5cm × 10cm= £2.50

**Urgotul Duo Border**

Non-adherent soft polymer wound contact dressing with absorbent pad and adhesive polyurethane film backing

*Without absorbant pad*

**Adaptic Touch**

Non-adherent soft silicone wound contact dressing

**Adaptic Touch dressing** (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.65, 20cm × 32cm= £12.50, 5cm × 7.6cm= £1.13, 7.6cm × 11cm= £2.25

**Askina SilNet**

Soft silicone-coated wound contact dressing

**Askina SilNet dressing** (B.Braun Medical Ltd) 10cm × 18cm= £4.98, 20cm × 30cm= £12.20, 5cm × 7.5cm= £1.13, 7.5cm × 10cm= £2.28

**Mepitel**

Soft silicone, semi-transparent wound contact dressing

**Mepitel dressing** (Molnlycke Health Care Ltd) 12cm × 15cm= £5.60, 5cm × 7cm= £1.40, 8cm × 10cm= £2.80

**Mepitel One**

Soft silicone, thin, transparent wound contact dressing

**Mepitel One dressing** (Molnlycke Health Care Ltd) 13cm × 15cm= £4.98, 24cm × 27.5cm= £14.25, 6cm × 7cm= £1.22, 9cm × 10cm= £2.41

**Physiotulle**

Non-adherent soft polymer wound contact dressing

**Physiotulle dressing** (Coloplast Ltd) 10cm × 10cm= £2.28, 15cm × 20cm= £6.96

**Silflex**

Soft silicone-coated polyester wound contact dressing

**Silflex dressing** (Advancis Medical) 12cm × 15cm= £4.58, 20cm × 30cm= £11.79, 35cm × 60cm= £39.54, 5cm × 7cm= £1.11, 8cm × 10cm= £2.27

**Silon-TSR**

Soft silicone polymer wound contact dressing

**Silon-TSR dressing** (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

**Sobion Contact**

Non-adherent soft polymer wound contact dressing

**Cutimed Sobion Contact dressing** (BSN medical Ltd) 10cm × 10cm= £1.99, 10cm × 20cm= £3.99, 20cm × 20cm= £6.99, 20cm × 30cm= £9.99, 7.5cm × 7.5cm= £1.49

**Tegaderm Contact**

Non-adherent soft polymer wound contact dressing

**Tegaderm Contact dressing** (3M Health Care Ltd) 20cm × 25cm= £10.86, 7.5cm × 10cm= £2.27

**Urgotul**

Non-adherent soft polymer wound contact dressing

**Urgotul dressing** (Urgo Ltd) 10cm × 10cm= £3.11, 10cm × 40cm= £10.44, 15cm × 15cm= £6.60, 15cm × 20cm= £8.79, 20cm × 30cm= £14.13, 5cm × 5cm= £1.55

**Hydrocolloid dressings**

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

**Hydrocolloid-fibrous dressings****Aquacel**

Soft non-woven pad containing hydrocolloid-fibres

**Aquacel** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £1.84, 2cm × 45cm= £2.48, dressing 10cm × 10cm square= £2.45, 15cm × 15cm square= £4.60, 4cm × 10cm rectangular= £1.32, 4cm × 20cm rectangular= £1.94, 4cm × 30cm rectangular= £2.92, 5cm × 5cm square= £1.03

**Aquacel Foam**

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

**Aquacel Foam dressing** (ConvaTec Ltd) (adhesive) 10cm × 10cm= £2.16, 12.5cm × 12.5cm= £2.68, 17.5cm × 17.5cm= £5.36, 19.8cm × 14cm heel= £5.48, 20cm × 16.9cm sacral= £4.92, 21cm × 21cm= £7.84, 25cm × 30cm= £10.15, 8cm × 8cm= £1.39, non-adhesive) 10cm × 10cm= £2.56, 15cm × 15cm= £4.30, 15cm × 20cm= £5.88, 20cm × 20cm= £7.01

**UrgoClean Pad**

Pad, hydrocolloid fibres coated with soft-adherent lipocolloidal wound contact layer

**UrgoClean Pad dressing** (Urgo Ltd) 10cm × 10cm square= £2.14, 20cm × 15cm rectangular= £4.02, 6cm × 6cm square= £0.96

**UrgoClean Rope**

Rope, non-woven rope containing hydrocolloid fibres

**UrgoClean rope dressing** (Urgo Ltd) 2.5cm × 40cm= £2.41, 5cm × 40cm= £3.18

**Polyurethane matrix dressing****Cutinova Hydro**

Polyurethane matrix with absorbent particles and waterproof polyurethane film

**Cutinova Hydro dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.57, 15cm × 20cm rectangular= £5.44, 5cm × 6cm rectangular= £1.28

*With adhesive border*

#### **Biatain Super**

Semi-permeable hydrocolloid dressing; without adhesive border

**Biatain Super dressing (adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.18, 12.5cm × 12.5cm square= £3.60, 12cm × 20cm rectangular= £3.61, 15cm × 15cm square= £4.35, 20cm × 20cm square= £6.78

#### **Granuflex Bordered**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex Bordered dressing** (ConvaTec Ltd) 10cm × 10cm square= £3.37, 10cm × 13cm triangular= £3.97, 15cm × 15cm square= £6.43, 15cm × 18cm triangular= £6.19, 6cm × 6cm square= £1.78

#### **Hydrocoll Border**

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

**Hydrocoll Border (bevelled edge) dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £2.43, 12cm × 18cm sacral= £3.64, 15cm × 15cm square= £4.57, 5cm × 5cm square= £1.01, 7.5cm × 7.5cm square= £1.67, 8cm × 12cm concave= £2.14

#### **Tegaderm Hydrocolloid**

Hydrocolloid dressing with adhesive border; normal or thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 12cm oval= £1.55, 13cm × 15cm oval= £2.89, dressing 10cm × 12cm oval= £2.33, 13cm × 15cm oval= £4.34, 17.1cm × 16.1cm sacral= £4.85

#### **Ultec Pro**

Semi-permeable hydrocolloid dressing with adhesive border

**Ultec Pro dressing (adhesive)** (Covidien (UK) Commercial Ltd) 15cm × 18cm sacral= £3.30, 19.5cm × 23cm sacral= £4.98, 21cm × 21cm square= £4.67

*Without adhesive border*

#### **ActivHeal Hydrocolloid**

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

**ActivHeal Hydrocolloid** (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square= £1.58, 15cm × 15cm square= £3.43, 15cm × 18cm sacral= £3.98, 5cm × 7.5cm rectangular= £0.78, foam backed dressing 10cm × 10cm square= £1.55, 15cm × 15cm square= £2.91, 15cm × 18cm sacral= £3.36, 5cm × 7.5cm rectangular= £0.97

#### **Askina Biofilm Transparent**

Semi-permeable, polyurethane film dressing with hydrocolloid adhesive

**Askina Biofilm Transparent dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £1.07, 20cm × 20cm square= £3.17

#### **Biatain Super**

Semi-permeable, hydrocolloid film dressing without adhesive border

**Biatain Super dressing (non-adhesive)** (Coloplast Ltd) 10cm × 10cm square= £2.18, 12.5cm × 12.5cm square= £3.60, 12cm × 20cm rectangular= £3.61, 15cm × 15cm square= £4.35, 20cm × 20cm square= £6.78

#### **Comfeel Plus Contour**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Contour dressing** (Coloplast Ltd) 6cm × 8cm= £2.23, 9cm × 11cm= £3.87

#### **Comfeel Plus Pressure Relieving**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Pressure Relieving dressing** (Coloplast Ltd) 10cm diameter circular= £4.66, 15cm diameter circular= £7.01, 7cm diameter circular= £3.48

#### **Comfeel Plus Transparent**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Transparent dressing** (Coloplast Ltd) 10cm × 10cm square= £1.28, 15cm × 15cm square= £3.35, 15cm × 20cm rectangular= £3.40, 20cm × 20cm square= £3.42, 5cm × 15cm rectangular= £1.59, 5cm × 25cm rectangular= £2.59, 5cm × 7cm rectangular= £0.67, 9cm × 14cm rectangular= £2.44, 9cm × 25cm rectangular= £3.47

#### **Comfeel Plus Ulcer**

Hydrocolloid dressings containing carmellose sodium and calcium alginate

**Comfeel Plus Ulcer (bevelled edge) dressing** (Coloplast Ltd) 10cm × 10cm square= £2.46, 18cm × 20cm triangular= £5.73, 20cm × 20cm square= £7.59, 4cm × 6cm rectangular= £0.96

#### **DuoDERM Extra Thin**

Semi-permeable hydrocolloid dressing

**DuoDERM Extra Thin dressing** (ConvaTec Ltd) 10cm × 10cm square= £1.33, 15cm × 15cm square= £2.88, 5cm × 10cm rectangular= £0.76, 7.5cm × 7.5cm square= £0.81, 9cm × 15cm rectangular= £1.78, 9cm × 25cm rectangular= £2.85, 9cm × 35cm rectangular= £3.98

#### **DuoDERM Signal**

Semi-permeable hydrocolloid dressing with "Time to change" indicator

**DuoDERM Signal dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.14, 11cm × 19cm oval= £3.25, 14cm × 14cm square= £3.75, 18.5cm × 19.5cm heel= £5.25, 20cm × 20cm square= £7.46, 22.5cm × 20cm sacral= £6.13

#### **Flexigran**

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

**Flexigran** (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

#### **Granuflex**

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

**Granuflex (modified) dressing** (ConvaTec Ltd) 10cm × 10cm square= £2.83, 15cm × 15cm square= £5.36, 15cm × 20cm rectangular= £5.81, 20cm × 20cm square= £8.07

#### **Hydrocoll Basic**

Hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll** (Paul Hartmann Ltd) Basic dressing 10cm × 10cm square= £2.47

#### **Hydrocoll Thin Film**

Thin hydrocolloid dressing with absorbent wound contact pad

**Hydrocoll Thin Film dressing** (Paul Hartmann Ltd) 10cm × 10cm square= £1.16, 15cm × 15cm square= £2.61, 7.5cm × 7.5cm square= £0.70

#### **Nu-Derm**

Semi-permeable hydrocolloid dressing (normal and thin)

**Nu-Derm dressing** (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.56, 15cm × 15cm square= £3.18, 15cm × 18cm sacral= £4.45, 20cm × 20cm square= £6.36, 5cm × 5cm square= £0.85, 8cm × 12cm heel/elbow= £3.18, thin 10cm × 10cm square= £1.06

#### **Tegaderm Hydrocolloid**

Hydrocolloid dressing without adhesive border; normal and thin

**Tegaderm Hydrocolloid** (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.55, dressing 10cm × 10cm square= £2.37

#### **Ultec Pro**

Semi-permeable hydrocolloid dressing; without adhesive border

**Ultec Pro dressing** (Covidien (UK) Commercial Ltd) 10cm × 10cm square= £2.28, 15cm × 15cm square= £4.44, 20cm × 20cm square= £6.69

#### **Foam dressings**

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-

backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handling capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

#### **Cavi-Care**

Soft, conforming cavity wound dressing prepared by mixing thoroughly for 15 seconds immediately before use and allowing to expand its volume within the cavity

#### *Polyurethane Foam Dressing*

##### **Cutimed Cavity**

**Cutimed Cavity dressing** (BSN medical Ltd) 10cm × 10cm = £3.12, 15cm × 15cm = £4.68, 5cm × 6cm = £1.88

##### **Kendall**

**Kendall Foam dressing** (Aria Medical Ltd) 10cm × 10cm square = £1.06, 10cm × 20cm rectangular = £2.05, 12.5cm × 12.5cm square = £1.80, 15cm × 15cm square = £2.60, 20cm × 20cm square = £3.01, 5cm × 5cm square = £0.71, 7.5cm × 7.5cm square = £1.21, 8.5cm × 7.5cm rectangular (fenestrated) = £0.91

#### *Polyurethane Foam Film Dressing with Adhesive Border*

##### **ActivHeal Foam Adhesive**

**ActivHeal Foam Adhesive dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square = £1.63, 12.5cm × 12.5cm square = £1.68, 15cm × 15cm square = £2.15, 20cm × 20cm square = £4.50, 7.5cm × 7.5cm square = £1.18

##### **Allewyn Adhesive**

**Allewyn Adhesive dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square = £2.21, 12.5cm × 12.5cm square = £2.70, 12.5cm × 22.5cm rectangular = £4.20, 17.5cm × 17.5cm square = £5.32, 17cm × 17cm anatomically shaped sacral = £4.00, 22.5cm × 22.5cm square = £7.75, 22cm × 22cm anatomically shaped sacral = £5.76, 7.5cm × 7.5cm square = £1.50

##### **Biatain Adhesive**

**Biatain Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square = £1.77, 12.5cm × 12.5cm square = £2.58, 17cm diameter contour = £5.01, 18cm × 18cm square = £5.21, 18cm × 28cm rectangular = £7.71, 19cm × 20cm heel = £5.21, 23cm × 23cm sacral = £4.46

##### **Biatain Silicone**

**Biatain Silicone dressing** (Coloplast Ltd) 7.5cm × 7.5cm = £1.46, 10cm × 10cm square = £2.15, 12.5cm × 12.5cm square = £2.63, 15cm × 15cm square = £3.90, 17.5cm × 17.5cm square = £5.18

##### **Kendall Island**

**Kendall Foam Island dressing** (Aria Medical Ltd) 10cm × 10cm square = £1.54, 15cm × 15cm square = £2.90, 20cm × 20cm square = £5.46

##### **PermaFoam**

**PermaFoam dressing (adhesive)** (Paul Hartmann Ltd) 16.5cm × 18cm concave = £4.06, 18cm × 18cm sacral = £3.34, 22cm × 22cm sacral = £3.84

##### **PermaFoam Comfort**

**PermaFoam Comfort dressing** (Paul Hartmann Ltd) 10cm × 20cm rectangular = £3.38, 11cm × 11cm square = £2.14, 15cm × 15cm square = £3.50, 20cm × 20cm square = £5.08, 8cm × 8cm square = £1.13

##### **PolyMem**

**PolyMem dressing** (Aspen Medical Europe Ltd) (adhesive) 10cm × 13cm rectangular = £2.18, 15cm × 15cm square = £2.93, 16.5cm × 20.9cm oval = £6.74, 18.4cm × 20cm sacral = £4.53, 5cm × 7.6cm oval = £1.15, 8.8cm × 12.7cm oval = £2.05

##### **Polymem**

**PolyMem** (Aspen Medical Europe Ltd) dressing (adhesive) 5cm × 5cm square = £0.52

##### **Tegaderm Foam Adhesive**

**Tegaderm Foam dressing (adhesive)** (3M Health Care Ltd) 10cm × 11cm oval = £2.39, 13.9cm × 13.9cm circular (heel) = £4.22, 14.3cm × 14.3cm square = £3.54, 14.3cm × 15.6cm oval = £4.24, 19cm × 22.2cm oval = £6.96, 6.9cm × 6.9cm soft cloth border = £1.71, 6.9cm × 7.6cm oval = £1.46

##### **Tielle**

**Tielle** (Systagenix Wound Management Ltd) Lite dressing 11cm × 11cm square = £2.28, dressing 15cm × 15cm square = £3.89, 15cm × 20cm rectangular = £4.87, 18cm × 18cm square = £4.95, 7cm × 9cm rectangular = £1.28

##### **Tielle Lite**

**Tielle Lite dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square = £2.28, 7cm × 9cm rectangular = £1.21, 8cm × 15cm rectangular = £2.81, 8cm × 20cm rectangular = £2.97

##### **Tielle Plus**

**Tielle Plus dressing** (Systagenix Wound Management Ltd) 11cm × 11cm square = £2.63, 15cm × 15cm sacrum = £3.13, square = £4.30, 15cm × 20cm rectangular = £5.39, 20cm × 26.5cm heel = £4.45

##### **Trufoam**

**Trufoam Border dressing** (Aspen Medical Europe Ltd) 11cm × 11cm square = £1.70, 15cm × 15cm square = £2.23, 15cm × 20cm rectangular = £4.04, 7cm × 9cm rectangular = £1.16

#### *Polyurethane Foam Film Dressing without Adhesive Border*

##### **ActivHeal Foam Non-Adhesive**

**ActivHeal Non-Adhesive Foam polyurethane dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm square = £1.13, 10cm × 20cm rectangular = £2.34, 20cm × 20cm square = £3.92, 5cm × 5cm square = £0.75

##### **Advazorb**

**Advazorb** (Advancis Medical) Heel dressing 17cm × 21cm = £4.75, dressing 10cm × 10cm square = £1.08, 10cm × 20cm rectangular = £3.35, 12.5cm × 12.5cm square = £1.59, 15cm × 15cm square = £2.10, 20cm × 20cm square = £3.75, 5cm × 5cm square = £0.65, 7.5cm × 7.5cm square = £0.78

##### **Advazorb Lite**

**Advazorb Lite dressing** (Advancis Medical) 10cm × 10cm square = £0.97, 10cm × 20cm rectangular = £3.02, 12.5cm × 12.5cm square = £1.43, 15cm × 15cm square = £1.89, 20cm × 20cm square = £3.38, 7.5cm × 7.5cm square = £0.70

##### **Allewyn Non-Adhesive**

**Allewyn dressing (non-adhesive)** (Smith & Nephew Healthcare Ltd) 10.5cm × 13.5cm heel (cup shaped) = £5.16, 10cm × 10cm square = £2.52, 10cm × 20cm rectangular = £4.05, 20cm × 20cm square = £6.76, 5cm × 5cm square = £1.27

##### **Askina Foam**

**Askina** (B.Braun Medical Ltd) Foam Cavity dressing 2.4cm × 40cm = £2.44, Foam dressing 10cm × 10cm square = £2.19, 10cm × 20cm rectangular = £3.45, 20cm × 20cm square = £5.77, Heel dressing 12cm × 20cm = £4.68

##### **Biatain -Ibu Non-Adhesive**

**Biatain -Ibu Non-Adhesive dressing** (Coloplast Ltd) 10cm × 12cm rectangular = £3.34, 10cm × 22.5cm rectangular = £5.26, 15cm × 15cm square = £5.26, 20cm × 20cm square = £8.95, 5cm × 7cm rectangular = £1.73

##### **Biatain -Ibu Soft-Hold**

**Biatain -Ibu Soft-Hold dressing** (Coloplast Ltd) 10cm × 12cm rectangular = £3.34, 10cm × 22.5cm rectangular = £5.26, 15cm × 15cm square = £5.26

##### **Biatain Non-Adhesive**

**Biatain Non-Adhesive dressing** (Coloplast Ltd) 10cm × 10cm square = £2.40, 10cm × 20cm rectangular = £3.96, 15cm × 15cm square = £4.43, 20cm × 20cm square = £6.57, 5cm × 7cm rectangular = £1.32

**Alginate dressings**

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If

the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

**ActivHeal Alginate**

Calcium sodium alginate dressing  
**ActivHeal Alginate dressing** (Advanced Medical Solutions Ltd) 10cm × 10cm= £1.15, 10cm × 20cm= £2.83, 5cm × 5cm= £0.59

**ActivHeal Aquafiber**

Non-woven, calcium sodium alginate dressing  
**ActivHeal Aquafiber** (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.81, dressing 10cm × 10cm= £1.80, 15cm × 15cm= £3.40, 5cm × 5cm= £0.76

**Algisite M**

Calcium alginate fibre, non-woven dressing  
**Algisite M** (Smith & Nephew Healthcare Ltd) Rope dressing 2cm × 30cm= £3.50, dressing 10cm × 10cm= £1.93, 15cm × 20cm= £5.19, 5cm × 5cm= £0.93

**Algosteril**

Calcium alginate dressing  
**Algosteril** (Smith & Nephew Healthcare Ltd) Rope dressing 2g= £3.83, dressing 10cm × 10cm= £2.12, 10cm × 20cm= £3.58, 5cm × 5cm= £0.93

**Biatain Alginate**

Alginate and carboxymethylcellulose dressing, highly absorbent, gelling dressing  
**Biatain Alginate dressing** (Coloplast Ltd) 10cm × 10cm= £2.33, 15cm × 15cm= £4.43, 44cm= £2.75, 5cm × 5cm= £0.98

Calcium alginate dressing  
**Sorbalgon** (Paul Hartmann Ltd) T dressing 2g= £3.51, dressing 10cm × 10cm= £1.72, 5cm × 5cm= £0.82

**Sorbsan Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads  
**Sorbsan Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £1.71, 10cm × 20cm= £3.20, 5cm × 5cm= £0.81

**Sorbsan Plus**

Alginate dressing bonded to a secondary absorbent viscose pad  
**Sorbsan Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £3.10, 10cm × 20cm= £3.96, 15cm × 20cm= £5.49, 7.5cm × 10cm= £1.76

**Sorbsan Ribbon**

Alginate dressing bonded to a secondary absorbent viscose pad  
**Sorbsan** (Aspen Medical Europe Ltd) Ribbon dressing 40cm= £2.04

**Sorbisan Surgical Packing**

Alginate dressing bonded to a secondary absorbent viscose pad

**Sorbisan** (Aspen Medical Europe Ltd) Packing dressing 2g= £3.47

**Suprasorb A**

Calcium alginate dressing

**Suprasorb A** (Lohmann & Rauscher (UK) Ltd) alginate dressing 10cm × 10cm= £1.23, 5cm × 5cm= £0.63, cavity dressing 2g= £2.28

**Tegaderm Alginate**

Calcium alginate dressing

**Tegaderm Alginate dressing** (3M Health Care Ltd) 10cm × 10cm= £1.72, 2cm × 30.4cm= £2.87, 5cm × 5cm= £0.81

**Urgosorb**

Alginate and carboxymethylcellulose dressing without adhesive border

**Urgosorb** (Urigo Ltd) Pad dressing 10cm × 10cm= £2.13, 10cm × 20cm= £3.91, 5cm × 5cm= £0.89, Rope dressing 30cm= £2.79

**Capillary-acting dressings****Advadraw**

Non-adherent dressing consisting of a soft viscose and polyester absorbent pad with central wicking layer between two perforated permeable wound contact layers

**Advadraw dressing** (Advancis Medical) 10cm × 10cm= £0.88, 10cm × 15cm= £1.19, 15cm × 20cm= £1.57, 5cm × 7.5cm= £0.57

**Advadraw Spiral**

**Advadraw** (Advancis Medical) Spiral dressing 0.5cm × 40cm= £0.82

**Cerdak Aerocloth**

Non-adhesive wound contact sachet containing ceramic spheres, with non-woven fabric adhesive backing

**Cerdak Aerocloth dressing** (Apollo Medical Products Ltd) 5cm × 10cm= £1.94, 5cm × 5cm= £1.37

**Cerdak Aerofilim**

Non-adhesive wound contact sachet containing ceramic spheres, with waterproof transparent adhesive film backing

**Cerdak Aerofilim dressing** (Apollo Medical Products Ltd) 5cm × 10cm= £2.07, 5cm × 5cm= £1.51

**Cerdak Basic**

Non-adhesive wound contact sachet containing ceramic spheres

**Cerdak Basic dressing** (Apollo Medical Products Ltd) 10cm × 10cm= £1.56, 10cm × 15cm= £2.08, 5cm × 5cm= £0.70

**Sumar Lite**

**Sumar Lite dressing** (Lantor (UK) Ltd) 10cm × 10cm= £1.59, 10cm × 15cm= £2.12, 5cm × 5cm= £0.93

**Sumar Max**

**Sumar Max dressing** (Lantor (UK) Ltd) 10cm × 10cm= £1.61, 10cm × 15cm= £2.15, 5cm × 5cm= £0.95

**Sumar Spiral**

**Sumar** (Lantor (UK) Ltd) Spiral dressing 0.5cm × 40cm= £1.57

**Vacutex**

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

**Vacutex dressing** (Haddenham Healthcare Ltd) 10cm × 10cm= £1.66, 10cm × 15cm= £2.23, 10cm × 20cm= £2.68, 5cm × 5cm= £0.94

**Odour absorbent dressings**

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

**Askina Carbosorb**

Activated charcoal and non-woven viscose rayon dressing

**Askina Carbosorb dressing** (B.Braun Medical Ltd) 10cm × 10cm= £2.89, 10cm × 20cm= £5.58

**CarboFLEX**

Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer

**CarboFlex dressing** (ConvaTec Ltd) 10cm × 10cm= £3.21, 15cm × 20cm= £7.30, 8cm × 15cm oval= £3.85

**Carbopad VC**

Activated charcoal non-absorbent dressing

**Carbopad VC dressing** (Synergy Health Plc) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

**CliniSorb Odour Control Dressings**

Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating

**CliniSorb dressing** (CliniMed Ltd) 10cm × 10cm= £1.91, 10cm × 20cm= £2.54, 15cm × 25cm= £4.09

**Sorbisan Plus Carbon**

Alginate dressing with activated carbon

**Sorbisan Plus Carbon dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £4.96, 10cm × 20cm= £5.94, 15cm × 20cm= £6.84, 7.5cm × 10cm= £2.56

**Antimicrobial dressings**

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

**Honey**  
Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings. For *Activon Tulle*<sup>®</sup>, where no size is stated by the prescriber the 5 cm size is to be supplied. *Medihoney*<sup>®</sup> *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

**Honey**

**Honey-based topical application**  
**Activon Honey**  
Medical grade manuka honey  
**L-Mesitran SOFT ointment dressing**  
Honey (medical grade) 40%  
**L-Mesitran** (Aspen Medical Europe Ltd) SOFT ointment dressing= £3.59

**MANUKApli Honey**  
Medical grade manuka honey  
**MANUKApli** (Manuka Medical Ltd) dressing= £5.90

**Honey-based topical application****Activon Honey**

Medical grade manuka honey

**L-Mesitran SOFT ointment dressing**

Honey (medical grade) 40%

**L-Mesitran** (Aspen Medical Europe Ltd) SOFT ointment dressing= £3.59

**MANUKApli Honey**

Medical grade manuka honey

**MANUKApli** (Manuka Medical Ltd) dressing= £5.90

**Medihoney Antibacterial Medical Honey**

Medical grade, *Leptospermum* sp.

**Medihoney** (Derma Sciences Europe, Ltd) Antibacterial Medical Honey dressing= £9.90

**Medihoney Antibacterial Wound Gel**

Medical grade, *Leptospermum* sp. 80% in natural waxes and oils

**Medihoney** (Derma Sciences Europe, Ltd) Antibacterial Wound Gel dressing= £4.02

**Melladerm Plus Honey**

Medical grade; Bulgarian, mountain flower) 45% in basis containing polyethylene glycol

**Mesitran Ointment**

Honey (medical grade) 47%

**Excipients** include lanolin

**Mesitran** (Aspen Medical Europe Ltd) ointment dressing= £9.90

*Sheet dressing***Actilite**

Knitted viscose impregnated with medical grade manuka honey and manuka oil

**Actilite gauze dressing** (Advancis Medical) 10cm × 10cm= £0.98, 10cm × 20cm= £1.90, 5cm × 5cm= £0.57

**Activon Tulle**

Knitted viscose impregnated with medical grade manuka honey

**Activon Tulle gauze dressing** (Advancis Medical) 10cm × 10cm= £2.97, 5cm × 5cm= £1.80

**Algivon**

Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey

**Algivon dressing** (Advancis Medical) 10cm × 10cm= £3.40, 5cm × 5cm= £1.98

**Algivon Plus**

Reinforced calcium alginate dressing impregnated with medical grade manuka honey

**Algivon Plus** (Advancis Medical) Ribbon dressing 2.5cm × 20cm= £3.36, dressing 10cm × 10cm= £3.36, 5cm × 5cm= £1.96

**L-Mesitran Border**

Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border

**L-Mesitran** (Aspen Medical Europe Ltd) Border sheet 10cm × 10cm square= £2.74

**L-Mesitran Hydro**

Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border

**L-Mesitran Hydro sheet** (Aspen Medical Europe Ltd) 10cm × 10cm square= £2.63, 15cm × 20cm rectangular= £5.48

**L-Mesitran Net**

Hydrogel, non-adherent wound contact layer, without adhesive border

**L-Mesitran** (Aspen Medical Europe Ltd) Net sheet 10cm × 10cm square= £2.53

**Medihoney Antibacterial Honey Apinate**

Non-adherent calcium alginate dressing, impregnated with medical grade honey

**Medihoney Antibacterial Honey Apinate** (Derma Sciences Europe, Ltd) dressing 10cm × 10cm square= £3.40, 5cm × 5cm square= £2.00, rope dressing 1.9cm × 30cm= £4.20

**Medihoney Antibacterial Honey Tulle**

Woven fabric impregnated with medical grade manuka honey

**Medihoney** (Derma Sciences Europe, Ltd) Tulle dressing 10cm x10cm= £2.98

**Medihoney Gel sheet**

Sodium alginate dressing impregnated with medical grade honey

**Medihoney Gel Sheet dressing** (Derma Sciences Europe, Ltd) 10cm × 10cm= £4.20, 5cm × 5cm= £1.75

**MelMax**

Acetate wound contact layer impregnated with buckwheat honey 75% in ointment basis

**MelMax dressing** (CliniMed Ltd) 5cm × 6cm rectangular= £4.82, 8cm × 10cm rectangular= £9.90, 8cm × 20cm rectangular= £19.79

**Melladerm Plus Tulle**

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

**Melladerm** (SanoMed Manufacturing BV) Plus Tulle dressing 10cm × 10cm= £2.10

**Iodine**

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

*Iodoflex*<sup>®</sup> and *Iodosorb*<sup>®</sup> are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

*Iodozyme*<sup>®</sup> is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

*Oxyzyme*<sup>®</sup> is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

*Povidone-iodine Fabric Dressing* is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

**Iodoflex Paste**

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

**Iodosorb Ointment**

Iodine 0.9% as cadexomer–iodine in an ointment basis  
**Iodosorb** (Smith & Nephew Healthcare Ltd) ointment dressing= £9.12

**Iodosorb Powder**

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet  
**Iodosorb** (Smith & Nephew Healthcare Ltd) powder dressing sachets= £1.95

**Iodozyme Hydrogel**

Hydrogel (two-component dressing containing glucose oxidase and iodide ions)

**Iodozyme dressing** (Crawford Healthcare Ltd) 10cm × 10cm square= £12.62, 6.5cm × 5cm rectangular= £7.57

**Oxyzyme Hydrogel**

Hydrogel (two-component dressing containing glucose oxidase and iodide ions)

**Oxyzyme dressing** (Crawford Healthcare Ltd) 10cm × 10cm square= £10.10, 6.5cm × 5cm rectangular= £6.06

*Povidone-iodine fabric dressing*

**Inadine**

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone-iodine ointment 10% **Inadine dressing** (Systagenix Wound Management Ltd) 5cm × 5cm= £0.33, 9.5cm × 9.5cm= £0.49

**Silver**

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

*Alginate dressings*

**Algisite Ag**

Calcium alginate dressing, with silver

**Algisite Ag dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.16, 10cm × 20cm= £7.65, 2g= £5.74, 5cm × 5cm= £1.66

**Askina Calgitrol Ag**

Calcium alginate and silver alginate dressing with polyurethane foam backing

**Askina Calgitrol Ag dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £3.24, 15cm × 15cm square= £6.27, 20cm × 20cm square= £14.62

**Askina Calgitrol Thin**

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

**Askina Calgitrol Thin dressing** (B.Braun Medical Ltd) 10cm × 10cm square= £4.08, 15cm × 15cm square= £9.16, 20cm × 20cm square= £16.18, 5cm × 5cm square= £1.97

**Melgisorb Ag**

Alginate and carboxymethylcellulose dressing, with ionic silver

**Melgisorb Ag** (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.54, dressing 10cm × 10cm= £3.64, 15cm × 15cm= £7.71, 5cm × 5cm= £1.82

**Silvercel**

Alginate and carboxymethylcellulose dressing impregnated with silver

**Silvercel dressing** (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.68, 11cm × 11cm square= £4.14, 2.5cm × 30.5cm rectangular= £4.65, 5cm × 5cm square= £1.68

**Silvercel Non-adherent**

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

**Silvercel Non-Adherent** (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £3.94, dressing 10cm × 20cm rectangular= £7.25, 11cm × 11cm square= £3.89, 5cm × 5cm square= £1.62

**Sorbsan Silver Flat**

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

**Sorbsan Silver Flat dressing** (Aspen Medical Europe Ltd) 10cm × 10cm= £3.97, 10cm × 20cm= £7.26, 5cm × 5cm= £1.57

**Sorbsan Silver Plus**

Calcium alginate dressing with absorbent backing, with silver

**Sorbsan Silver Plus dressing** (Aspen Medical Europe Ltd) 10cm × 15cm= £5.56, 10cm × 20cm= £6.77, 15cm × 20cm= £9.08, 7.5cm × 10cm= £3.35

**Sorbsan Silver Ribbon**

With silver

**Sorbsan** (Aspen Medical Europe Ltd) Silver Ribbon dressing 1g= £4.15

**Sorbsan Silver Surgical Packing**

With silver

**Sorbsan** (Aspen Medical Europe Ltd) Silver Packing dressing 2g= £5.76

**Suprasorb A + Ag**

Calcium alginate dressing, with silver

**Suprasorb A + Ag** (Lohmann & Rauscher (UK) Ltd) dressing 10cm × 10cm= £4.11, 10cm × 20cm= £7.59, 5cm × 5cm= £1.63, rope dressing 2g= £6.08

**Tegaderm Alginate Ag**

Calcium alginate and carboxymethylcellulose dressing, with silver

**Tegaderm Alginate Ag dressing** (3M Health Care Ltd) 10cm × 10cm= £3.24, 3cm × 30cm= £3.70, 5cm × 5cm= £1.39

**Urgosorb Silver**

Alginate and carboxymethylcellulose dressing, impregnated with silver

**Urgosorb Silver** (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.71, dressing 10cm × 10cm= £3.68, 10cm × 20cm= £6.95, 5cm × 5cm= £1.54

*Foam dressings*

**Acticoat Moisture Control**

Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer

**Acticoat Moisture Control dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £16.95, 10cm × 20cm rectangular= £33.04, 5cm × 5cm square= £7.25

**Allevyn Ag**

Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border

**Allevyn Ag** (Smith & Nephew Healthcare Ltd) Adhesive dressing 10cm × 10cm square= £5.50, 12.5cm × 12.5cm square= £7.23, 17.5cm × 17.5cm square= £13.90, 17cm × 17cm sacral= £10.85, 22cm × 22cm sacral= £14.54, 7.5cm × 7.5cm square= £3.49, Heel Non-Adhesive dressing 10.5cm × 13.5cm= £10.76, Non-Adhesive dressing 10cm × 10cm square= £6.14, 15cm × 15cm square= £11.64, 20cm × 20cm square= £17.04, 5cm × 5cm square= £3.26

**Biatain Ag**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**Biatain Ag** (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.07, dressing 10cm × 10cm square= £8.16, 10cm × 20cm rectangular= £15.00, 12.5cm × 12.5cm square= £9.34, 15cm × 15cm square= £16.38, 18cm × 18cm square= £18.73, 19cm × 20cm heel= £18.47, 20cm × 20cm square= £23.11, 23cm × 23cm sacral= £19.63, 5cm × 7cm rectangular= £3.35

**PolyMem Silver**

Silver impregnated polyurethane foam film dressing, with or without adhesive border

**PolyMem Silver** (Aspen Medical Europe Ltd) WIC dressing 8cm × 8cm= £7.05, dressing 10.8cm × 10.8cm square= £8.86, 12.7cm × 8.8cm oval= £5.60, 17cm × 19cm rectangular= £17.76, 5cm × 7.6cm oval= £2.27

**UrgoCell Silver**

Non-adherent, polyurethane foam film dressing with silver in wound contact layer

**UrgoCell Silver dressing** (Urgo Ltd) 10cm × 10cm= £5.95, 15cm × 20cm= £10.90, 6cm × 6cm= £4.33

*Hydrocolloid dressings***Aquacel Ag**

Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)

**Aquacel Ag** (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.08, 2cm × 45cm= £4.76, dressing 10cm × 10cm square= £4.74, 15cm × 15cm square= £8.92, 20cm × 30cm rectangular= £22.12, 4cm × 10cm rectangular= £2.88, 4cm × 20cm rectangular= £3.76, 4cm × 30cm rectangular= £5.63

**Physiottulle Ag**

Non-adherent polyester fabric with hydrocolloid and silver sulfadiazine

**Physiottulle** (Coloplast Ltd) dressing 10cm × 10cm= £2.28

*Low adherence dressing***Acticoat**

Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.65, 10cm × 20cm rectangular= £13.53, 20cm × 40cm rectangular= £46.28, 5cm × 5cm square= £3.54

**Acticoat 7**

Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.34, 15cm × 15cm square= £32.97, 5cm × 5cm square= £6.16

**Acticoat Flex 3**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)

**Acticoat Flex 3 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £8.64, 10cm × 20cm rectangular= £13.50, 20cm × 40cm rectangular= £46.21, 5cm × 5cm square= £3.54

**Acticoat Flex 7**

Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)

**Acticoat Flex 7 dressing** (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £18.31, 15cm × 15cm square= £32.92, 5cm × 5cm square= £6.15

**Atrauman Ag**

Non-adherent polyamide fabric impregnated with silver and neutral triglycerides

**Atrauman Ag dressing** (Paul Hartmann Ltd) 10cm × 10cm= £1.26, 10cm × 20cm= £2.47, 5cm × 5cm= £0.52

*Soft polymer dressings***Allevyn Ag Gentle**

Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border

**Allevyn Ag Gentle** (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.43, 12.5cm × 12.5cm= £8.26, 17.5cm × 17.5cm= £15.75, 7.5cm × 7.5cm= £4.28, dressing 10cm × 10cm= £6.24, 10cm × 20cm= £10.31, 15cm × 15cm= £11.61, 20cm × 20cm= £17.19, 5cm × 5cm= £3.35

**Mepilex Ag**

Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border

**Mepilex** (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.12, 10cm × 20cm= £10.09, 15cm × 15cm= £11.36, 20cm × 20cm= £16.84, 20cm × 50cm= £63.20, Border Ag dressing 10cm × 12.5cm= £6.16, 10cm × 20cm= £8.97, 10cm × 30cm= £13.46, 15cm × 17.5cm= £11.31, 17cm × 20cm= £14.66, 7cm × 7.5cm= £3.41, Border Sacrum Ag dressing 18cm × 18cm= £11.83, 20cm × 20cm= £14.38, 23cm × 23cm= £18.89, Heel Ag dressing 13cm × 20cm= £12.78, 15cm × 22cm= £14.32

**Urgotul Silver**

Non-adherent soft polymer wound contact dressing, with silver

**Urgotul Silver dressing** (Urigo Ltd) 10cm × 12cm= £3.58, 15cm × 20cm= £9.75

**UrgotulDuo Silver**

Non-adherent soft polymer wound contact dressing, with silver

*With charcoal***Actisorb Silver 220**

Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve

**Actisorb Silver 220 dressing** (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.58, 10.5cm × 19cm= £4.70, 6.5cm × 9.5cm= £1.64

**Other antimicrobials****Cutimed Siltec Sorbact**

Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Siltec Sorbact dressing** (BSN medical Ltd) 12.5cm × 12.5cm= £6.44, 15cm × 15cm= £7.98, 17.5cm × 17.5cm= £11.17, 22.5cm × 22.5cm= £16.99, 7.5cm × 7.5cm= £2.51, 17.5cm × 17.5cm sacral= £8.07, 23cm × 23cm sacral= £12.14

**Cutimed Sorbact**

Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton

**Cutimed Sorbact** (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.03, 5cm × 20cm= £7.95, Round swab 3cm= £3.30, dressing pad 10cm × 10cm= £5.50, 10cm × 20cm= £8.58, 7cm × 9cm= £3.52, swab 4cm × 6cm= £1.65, 7cm × 9cm= £2.75

**Cutimed Sorbact Gel**

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

**Cutimed Sorbact Gel dressing** (BSN medical Ltd) 7.5cm × 15cm rectangular= £4.48, 7.5cm × 7.5cm square= £2.65

**Cutimed Sorbact Hydroactive**

Non-adhesive gel dressing with hypopolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

**Cutimed Sorbact Hydroactive dressing** (BSN medical Ltd) 14cm × 14cm= £5.37, 14cm × 24cm= £8.60, 19cm × 19cm= £10.10, 24cm × 24cm= £15.31, 7cm × 8.5cm= £3.68

**Cutimed Sorbact Hydroactive B**

Gel dressing with hypopolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

**Cutimed Sorbact Hydroactive B dressing** (BSN medical Ltd) 10cm × 10cm= £7.08, 10cm × 20cm= £11.35, 15cm × 15cm= £13.34, 5cm × 6.5cm= £3.97

**Flaminal Forte gel**

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

**Flaminal Forte gel dressing** (Flen Health UK Ltd) 15g= £7.68, 50g= £25.42

**Flaminal Hydro gel**

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

**Flaminal Hydro gel dressing** (Flen Health UK Ltd) 15g= £7.68, 50g= £25.42

**Kendall AMD**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial foam dressing** (Aria Medical Ltd) 10cm × 10cm square= £4.71, 10cm × 20cm rectangular= £8.92, 15cm × 15cm square= £8.92, 20cm × 20cm square= £13.07, 5cm × 5cm square= £2.50, 8.8cm × 7.5cm rectangular (fenestrated)= £4.23

**Kendall AMD Plus**

Foam dressing with polyhexanide, without adhesive border

**Kendall AMD Antimicrobial Plus foam dressing** (Aria Medical Ltd) 10cm × 10cm square= £4.94, 8.8cm × 7.5cm rectangular (fenestrated)= £4.43

**Octenilin Wound gel**

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

**Octenilin Wound Gel dressing** (Schulke & Mayr Ltd) 20ml= £4.78

**Prontosan Wound Gel**

Hydrogel containing betaine surfactant and polihexanide

**Prontosan Wound Gel dressing** (B. Braun Medical Ltd) 30ml= £6.44

**Suprasorb X + PHMB**

Biosynthetic cellulose fibre dressing with polihexanide

**Suprasorb X + PHMB dressing** (Lohmann & Rauscher (UK) Ltd) 14cm × 20cm rectangular= £11.64, 2cm × 21cm rope= £7.25, 5cm × 5cm square= £2.57, 9cm × 9cm square= £5.12

**Telfa AMD**

Low adherence absorbent perforated plastic film faced dressing with polihexanide

**Telfa AMD dressing** (Aria Medical Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

**Telfa AMD Island**

Low adherence dressing with adhesive border and absorbent pad, with polihexanide

**Telfa AMD Island dressing** (Aria Medical Ltd) 10cm × 12.5cm= £0.59, 10cm × 20cm= £0.86, 10cm × 25.5cm= £0.98, 10cm × 35cm= £1.22

*Chlorhexidine gauze dressing***Bactigras**

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

**Bactigras gauze dressing** (Smith & Nephew Healthcare Ltd) 10cm × 10cm= no price available, 5cm × 5cm= no price available

*Irrigation fluids***Octenilin Wound irrigation solution**

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

**Octenilin irrigation solution** (Schulke & Mayr Ltd) 350mL bottles= £4.60

**Prontosan Wound Irrigation Solution**

Aqueous solution containing betaine surfactant and polihexanide

**Prontosan irrigation solution** (B. Braun Medical Ltd) 350ml bottles= £4.78, 40ml unit dose= £14.18

**Specialised dressings****Protease-modulating matrix dressings****Cadesorb Ointment**

**Cadesorb** (Smith & Nephew Healthcare Ltd) ointment= £9.32

**Catrix**

**Catrix dressing** (Cranage Healthcare Ltd) sachets= £3.80

**Promogran**

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran dressing** (Systagenix Wound Management Ltd) 123 square cm= £15.62, 28 square cm= £5.19

**Promogran Prisma Matrix**

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

**Promogran Prisma dressing** (Systagenix Wound Management Ltd) 123 square cm= £17.98, 28 square cm= £6.31

**UrgoStart**

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

**UrgoStart dressing** (Urgo Ltd) 10cm × 10cm= £6.16, 15cm × 20cm= £11.08, 6cm × 6cm= £4.45, 12cm × 19cm heel= £8.49

**UrgoStart Contact**

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

**UrgoStart** (Urgo Ltd) Contact dressing 5cm × 7cm= £3.00

**Silicone keloid dressings**

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

*Silicone gel***Bapscarcare**

Silicone gel

**Bapscarcare** (BAP Medical UK Ltd) gel= £17.00

**Ciltech**

Silicone gel

**Ciltech** (Su-Med International (UK) Ltd) gel= £50.00

**Dermatix**

Silicone gel

**Dermatix gel** (Meda Pharmaceuticals Ltd) = £60.53

**Kelo-cote UV**

Silicone gel with SPF 30 UV protection

**Kelo-cote** (Sinclair IS Pharma Plc) UV gel= £17.88

**Kelo-cote gel**

Silicone gel

**Kelo-cote** (Sinclair IS Pharma Plc) gel= £51.00

**Kelo-cote spray**

Silicone spray

**Kelo-cote** (Sinclair IS Pharma Plc) spray= £51.00

**NewGel+E**

Silicone gel with vitamin E

**NewGel+E** (Advantech Surgical Ltd) gel= £17.70

**ScarSil**

Silicone gel

**ScarSil** (Jobskin Ltd) gel= £15.19

**Silgel STC-SE**

Silicone gel

**Silgel** (Nagor Ltd) STC-SE gel= £19.00

*Silicone sheets***Advasil Conform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Advasil Conform sheet** (Advancis Medical) 10cm × 10cm square= £5.20, 15cm × 10cm rectangular= £9.17

**Bapscarcare T**

Self-adhesive silicone gel sheet

**Bapscarcare T sheet** (BAP Medical UK Ltd) 10cm × 15cm rectangular= £9.00, 5cm × 30cm rectangular= £9.00, 5cm × 7cm rectangular= £3.15

**Cica-Care**

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

**Cica-Care sheet** (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £28.82, 6cm × 12cm rectangular= £14.79

**Ciltech**

Silicone gel sheet

**Ciltech sheet** (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

**Dermatix**

Self-adhesive silicone gel sheet (clear- or fabric-backed)

**Dermatix** (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

**Mepiform**

Self-adhesive silicone gel sheet with polyurethane film backing

**Mepiform sheet** (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £10.90, 5cm × 7cm rectangular= £3.45, 9cm × 18cm rectangular= £13.49

**Scar Fx**

Self-adhesive, transparent, silicone gel sheet

**Scar Fx sheet** (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

**Silgel**

Silicone gel sheet

**Silgel sheet** (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

**Adjunct dressings and appliances****Surgical absorbents**

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate ('strike through') with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

**Cotton****Absorbent Cotton, BP**

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Absorbent Cotton, Hospital Quality**

As for absorbent cotton but lower quality materials, shorter staple length etc.

**Absorbent** (Robert Bailey & Son Plc) cotton hospital quality

**Gauze and cotton tissue****Gamgee Tissue (blue)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2 **Gamgee** (Robinson Healthcare) tissue blue label

**Gamgee Tissue (pink)**

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2 **Gamgee** (Robinson Healthcare) tissue pink label DT

**Gauze and tissue****Absorbent Cotton Gauze, BP 1988**

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

**Absorbent** (Robert Bailey & Son Plc) cotton BP 1988

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

**Clini** (CliniSupplies Ltd) absorbent cotton BP 1988

**Vernaid** (Synergy Health Plc) absorbent cotton BP 1988

**Absorbent Cotton and Viscose Ribbon Gauze, BP 1988**

Woven fabric in ribbon form with fast selvage edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

**Vernaid Fast Edge ribbon gauze sterile** (Synergy Health Plc) 1.25cm, 2.5cm

**Lint****Absorbent Lint, BPC**

Cotton cloth of plain weave with nap raised on one side from warp yarns

**Absorbent** (Robinson Healthcare) lint

**Alvita** (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

**Clini** (CliniSupplies Ltd) absorbent lint BPC

**Pads****Drisorb**

Absorbent Dressing Pads, Sterile

**Drisorb** (Synergy Health Plc) dressing pad 10cm × 20cm= £0.17

**PremierPad**

Absorbent Dressing Pads, Sterile

**PremierPad dressing pad** (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

**Xupad**

Absorbent Dressing Pads, Sterile

**Xupad dressing pad** (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

**Wound drainage pouches**

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

**Biotrol Draina S**

Wound drainage pouch

**Biotrol Draina S wound drainage bag** (B.Braun Medical Ltd) large (Transparent)= £95.45, medium(Transparent)= £77.61, mini (Transparent)= £77.84

**Biotrol Draina S Vision**

Wound drainage pouch

**Draina S Vision** (B.Braun Medical Ltd) 100 wound drainage bag= £123.94, 50 wound drainage bag= £101.11, 75 wound drainage bag= £106.82

**Eakin Access window**

For use with Eakin® pouches

**Eakin** (Pelican Healthcare Ltd) access window= £37.74

**Eakin Wound pouch, bung closure**

Wound pouch, bung closure

**Eakin wound drainage bag with bung closure** (Pelican Healthcare Ltd)

large= £102.45, medium=£75.49, small=£53.92, and access window for horizontal wounds, extra large= £102.45, for horizontal wounds, extra large= £91.66, for vertical incision wounds, extra large= £91.66, wounds, extra large= £91.66

**Eakin Wound pouch, fold and tuck closure**

Wound pouch, fold and tuck closure

**Eakin wound drainage bag with fold and tuck closure** (Pelican Healthcare Ltd) large= £91.66, medium= £70.10, small= £48.53, extra large= £80.88

**Option Wound Manager**

Wound drainage bag

**Option wound manager bag** (Oakmed Ltd) large= £160.22, medium= £134.42, small= £131.50, square= £140.27, extra small= £118.23

**Option Wound Manager with access port**

Wound drainage bag, with access port

**Option wound manager bag with access port**, (Oakmed Ltd) large= £171.27, medium= £140.27, small= £137.34, square= £146.11, extra small= £129.28

**Option Wound Manager, cut to fit**

Wound drainage bag, cut to fit

**Option wound manager bag** (Oakmed Ltd) large= £84.23, medium= £80.42, small= £72.59

**Welland Fistula bag**

Wound drainage bag, cut-to-fit

**Welland** (Welland Medical Ltd) Fistula wound drainage bag= £82.07

**Physical debridement pads**

Debrisoft® is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. Debrisoft® must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

**Debrisoft Pad**

Polyester fibres with bound edges and knitted outer surface coated with polyacrylate

**Debrisoft** (Lohmann & Rauscher (UK) Ltd) pad 10cm × 10cm= £6.45

## Complex adjunct therapies

### Topical negative pressure therapy

#### Accessories

#### Renasys

Soft port and connector

**Renasys** (Smith & Nephew Healthcare Ltd) Soft Port= £11.21, connector for use with soft port= £3.29

#### V.A.C.

Drape, gel for canister, Sensa T.R.A.C. Pad

**Sensa T.R.A.C.** (KCI Medical Ltd) pad= £10.95

**T.R.A.C.** (KCI Medical Ltd) connector= £3.13

**V.A.C.** (KCI Medical Ltd) drape= £9.39, gel strips= £3.76

#### Venturi

Gel patches, adhesive, and connector

**Venturi** (Talley Group Ltd) adhesive gel patch= £15.00, connector= £15.00

#### WoundASSIST gel strip

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

#### Vacuum assisted closure products

#### Exsu-Fast kit 1

Dressing Kit

**Exsu-Fast** (Synergy Health Plc) dressing kit 1= £28.04

#### Exsu-Fast kit 2

Dressing Kit

**Exsu-Fast** (Synergy Health Plc) dressing kit 2= £35.83

#### Exsu-Fast kit 3

Dressing Kit

**Exsu-Fast** (Synergy Health Plc) dressing kit 3= £35.83

#### Exsu-Fast kit 4

Dressing Kit

**Exsu-Fast** (Synergy Health Plc) dressing kit 4= £28.04

#### V.A.C GranuFoam

Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver

**V.A.C. GranuFoam** (KCI Medical Ltd) Bridge dressing kit= £32.04,

Silver with Sensa T.R.A.C dressing kit medium= £38.04, small= £32.79, dressing kit large= £31.70, medium= £27.32, small= £22.95

#### V.A.C Simplace

Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)

**V.A.C. Simplace EX dressing kit** (KCI Medical Ltd) medium= £30.58, small= £26.60

#### V.A.C WhiteFoam

Polyvinyl alcohol foam dressing or dressing kit

**V.A.C. WhiteFoam dressing** (KCI Medical Ltd) large= £17.04, small= £10.64, kit large= £33.54, small= £25.91

#### Venturi

Wound sealing kit, flat drain; with or without channel drain

**Venturi wound sealing kit with** (Talley Group Ltd) channel drain= £15.00, flat drain, large= £17.50, standard= £15.00

#### WoundASSIST

Wound pack and channel drain

**WoundASSIST TNP dressing pack** (Huntleigh Healthcare Ltd)

medium/large= £23.85, small/medium= £20.81, channel drain medium/large= £23.85, small/medium= £20.81, extra large= £34.05

#### Wound drainage collection devices

#### ActiV.A.C.

Canister with gel

**ActiV.A.C** (KCI Medical Ltd) canister with gel= £28.42

#### S-Canister

Canister kit

**S-Canister** (Smith & Nephew Healthcare Ltd) kit= £19.00

#### V.A.C Freedom

Canister with gel

**V.A.C.** (KCI Medical Ltd) Freedom Canister with gel= £28.85

#### Venturi

Canister kit with solidifier

**Venturi** (Talley Group Ltd) Compact canister kit= £12.50, canister kit= £12.50

#### WoundASSIST wound pack

Canister

**WoundASSIST** (Huntleigh Healthcare Ltd) TNP canister= £20.30

## Wound care accessories

### Dressing packs

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

#### Multiple Pack Dressing No. 1

Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wave bandages (banded)

**Vernaid** (Synergy Health Plc) multiple pack dressing

#### Non-drug tariff specification sterile dressing packs

#### Dressit

Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field

**Dressit sterile dressing pack** (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

#### Nurse It

Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable

forceps, paper measuring tape

**Nurse It sterile dressing pack** (Medicareplus International Ltd) with medium/large gloves= £0.55, small/medium gloves= £0.55

#### Polyfield Nitrile Patient Pack

Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron

**Polyfield Nitrile Patient Pack with** (Shermond) large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

#### Sterile Dressing Pack with Non-Woven Pads

#### Vernaid

(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health Plc) sterile dressing pack with non-woven pads

#### Sterile dressing packs

#### Vernaid

(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls,

absorbent paper towel, water repellent inner wrapper

**Vernaid** (Synergy Health Plc) sterile dressing pack

#### Woven and fabric swabs

#### Gauze Swab, PB 1988

Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

**Alvita gauze swab 8ply** (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CS** (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm

**Clini gauze swab 8ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Gauze** (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm

**MeCoBo gauze swab 8ply** (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Propax gauze** (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm

**Sovereign** (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Steraid** (Robert Bailey & Son Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

**Vernaid gauze swab 8ply** (Synergy Health Plc) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Non-woven Fabric Swab**

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

**CS** (CliniSupplies Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**Clini non-woven fabric swab 4ply** (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**CliniMed** (CliniMed Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**MeCoBo** (MeCoBo Ltd) non-woven fabric swab 4ply non-sterile 10cm × 10cm

**Multisorb** (BSN medical Ltd) non-woven fabric swab 4ply sterile 7.5cm × 7.5cm

**Sofisorb non-woven fabric swab 4ply** (Synergy Health Plc) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Softswab non-woven fabric swab 4ply** (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Topper 8 non-woven fabric swab 4ply** (Systagenix Wound Management Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

**Filmated non-woven Fabric Swab****Regal**

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile

**Regal** (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

**Surgical adhesive tapes**

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

**Occlusive adhesive tapes****Blenderm**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymeric adhesive mass

**Blenderm tape** (3M Health Care Ltd) 2.5cm= £1.77, 5cm= £3.37

**Sleek**

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

**Leukoplast Sleek tape** (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

**Permeable adhesive tapes****3m Kind Removal Silicone Tape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**3M Micropore Silicone tape** (3M Health Care Ltd) 2.5cm= £3.58, 5cm= £6.48

**Chemifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Chemifix tape** (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

**Chemipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Chemipore tape** (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

**Clinipore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Clinipore tape** (CliniSupplies Ltd) 1.25cm= £0.35, 2.5cm= £0.73, 5cm= £0.99

**Elastoplast**

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

**Tensoplast** (BSN medical Ltd) elastic adhesive tape 2.5cm

**Hypafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Hypafix tape** (BSN medical Ltd) 10cm= £4.67, 15cm= £6.92, 2.5cm= £1.69, 20cm= £9.18, 30cm= £13.27, 5cm= £2.68

**Insil**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Insil tape** (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

**Leukofix**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukofix tape** (BSN medical Ltd) 1.25cm= £0.55, 2.5cm= £0.90, 5cm= £1.57

**Leukopor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Leukopor tape** (BSN medical Ltd) 1.25cm= £0.49, 2.5cm= £0.77, 5cm= £1.35

**Medioplast**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Medioplast tape** (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

**Medioplast**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Medioplast Zinc Oxide plaster** (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

**Mefix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Mefix tape** (Molnlycke Health Care Ltd) 10cm= £2.90, 15cm= £3.95, 2.5cm= £1.03, 20cm= £5.07, 30cm= £7.27, 5cm= £1.81

**Mepitac**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Mepitac tape** (Molnlycke Health Care Ltd) 2cm= £6.96, 4cm= £6.96

**Micropore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Micropore tape** (3M Health Care Ltd) 1.25cm= £0.62, 2.5cm= £0.92, 5cm= £1.62

**Omnifix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Omnifix tape** (Paul Hartmann Ltd) 10cm= £4.08, 15cm= £6.02, 5cm= £2.42

**OpSite Flexifix Gentle**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**OpSite Flexifix Gentle tape** (Smith & Nephew Healthcare Ltd) 2.5cm= £10.30, 5cm= £19.31

**Primafix**

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

**Primafix tape** (Smith & Nephew Healthcare Ltd) 10cm= £2.36, 15cm= £3.48, 20cm= £4.29, 5cm= £1.61

**Scanpor**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Scanpor tape** (Bio-Diagnostics Ltd) 1.25cm= £0.55, 2.5cm= £0.92, 5cm= £1.75, 7.5cm= £2.56

**Siltape**

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

**Siltape** (Advancis Medical) 2cm= £5.60, 4cm= £5.60

**Strappal**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Strappal adhesive tape** (BSN medical Ltd) 2.5cm= £1.39, 5cm= £2.34, 7.5cm= £3.53

**Transpore**

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

**Transpore tape** (3M Health Care Ltd) 2.5cm= £0.84, 5cm= £1.48

**Zinc Oxide Adhesive Tape, BP 1988**

Fabric, plain weave, warp and weft of cotton and/or viscose, spread with an adhesive containing zinc oxide

**Fast Aid zinc oxide adhesive tape** (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

**Skin closure dressings**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive (section 13.10.5) can be used for closure of minor skin wounds and for additional suture support.

*Skin closure strips, sterile***Leukostrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Leukostrip** (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.38

**Omnistrip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Omnistrip** (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £24.34

**Steri-strip**

Drug Tariff specifies that these are specifically for personal administration by the prescriber

**Steri-strip** (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.77

**Bandages****Non-extensible bandages**

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

**Open-weave Bandage, Type 1 BP 1988**

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

**Clini open weave bandage Type 1 BP 1988** (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Vernaid white open weave bandage** (Synergy Health Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**White open weave bandage** (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

**Triangular Calico Bandage, BP 1980**

Unbleached calico right-angled triangle

**Clini** (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

**Triangular** (BSN medical Ltd) calico bandage 90cm × 127cm

**Light-weight conforming bandages**

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

**Acti-Wrap**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Acti-Wrap (cohesive/latex free) bandage** (Activa Healthcare Ltd) 10cm × 4m= £0.81, 6cm × 4m= £0.47, 8cm × 4m= £0.69

**Cotton Conforming Bandage, BP 1988**

Cotton fabric, plain weave, treated to impart some elasticity to warp and weft

**Easifix Crinx bandage** (BSN medical Ltd) 10cm × 3.5m= £1.03, 15cm × 3.5m= £1.41, 5cm × 3.5m= £0.68, 7.5cm × 3.5m= £0.84

**Easifix**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Easifix bandage** (BSN medical Ltd) 10cm × 4m= £0.51, 15cm × 4m= £0.86, 5cm × 4m= £0.35, 7.5cm × 4m= £0.43

**Easifix K**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Easifix K bandage** (BSN medical Ltd) 10cm × 4m= £0.18, 15cm × 4m= £0.32, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.16

**Hospiform**

Fabric, plain weave, warp of polyamide, weft of viscose

**Hospiform bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.19, 12cm × 4m= £0.24, 6cm × 4m= £0.14, 8cm × 4m= £0.17

**K-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**K-Band bandage** (Urigo Ltd) 10cm × 4m= £0.28, 15cm × 4m= £0.50, 5cm × 4m= £0.20, 7cm × 4m= £0.26

**Knit Fix**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Knit Fix bandage** (Robert Bailey & Son Plc) 10cm × 4m= £0.17, 15cm × 4m= £0.33, 5cm × 4m= £0.12, 7cm × 4m= £0.17

**Knit-Band**

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

**Knit-Band bandage** (CliniSupplies Ltd) 10cm × 4m= £0.17, 15cm × 4m= £0.30, 5cm × 4m= £0.10, 7cm × 4m= £0.15

**Contour**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Contour bandage** (Easigrp Ltd) 10cm × 4m= £0.40, 15cm × 4m= £0.66, 5cm × 4m= £0.28, 7.5cm × 4m= £0.35

**Mollelast**

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Mollelast** (Lohmann & Rauscher (UK) Ltd) bandage 4cm × 4m= £0.30

**Peha-haft**

Polyamide and Cellulose Contour Bandage, cohesive, latex-free

**Peha-haft bandage** (Paul Hartmann Ltd) 10cm × 4m= £0.77, 12cm × 4m= £0.91, 2.5cm × 4m= £0.74, 4cm × 4m= £0.48, 6cm × 4m= £0.56, 8cm × 4m= £0.67

#### PremierBand

Polyamide and Cellulose Contour Bandage

**PremierBand bandage** (Shermond) 10cm × 4m= £0.17, 15cm × 4m= £0.25, 5cm × 4m= £0.12, 7.5cm × 4m= £0.14

#### Slinky

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Slinky bandage** (Molnlycke Health Care Ltd) 10cm × 4m= £0.72, 15cm × 4m= £1.04, 7.5cm × 4m= £0.59

#### Stayform

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

**Stayform bandage** (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.68, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

#### Tubular bandages and garments

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

*Elasticated Surgical Tubular Stockinette, Foam padded* is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP 1993*, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

*Non-elasticated Cotton Stockinette, Bleached, BP 1988* 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP 1988*, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

#### Elasticated

##### Acti-Fast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

**Acti-Fast 2-way stretch stockinette** (Activa Healthcare Ltd) 10.75cm= £6.04, 17.5cm= £1.83, 20cm= £3.20, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.77

##### Clinifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes **CliniFast stockinette** (CliniSupplies Ltd) 10.75cm= £6.04, 17.5cm= £1.83, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.77, clava 5-14 years= £6.75, 6 months-5 years= £5.85, ckle shorts large adult= £16.25, medium adult= £14.25, small adult= £12.50, gloves large adult= £4.99, child/small adult= £4.99, gloves medium adult= £4.99, child= £4.99, gloves small child= £4.99, leggings (Blue, Pink, White) 11-14 years= £11.88, 2-5 years= £9.50, 5-8 years= £10.69, 8-11 years= £11.88, mittens 2-8 years= £2.97, 8-14 years= £2.97, up to 24 months= £2.97, socks 8-14 years= £2.97, up to 8 years= £2.97, tights (Blue, Pink, White) 6-24 months= £7.13, vest long sleeve (Blue, Pink, White) 11-

14 years= £11.88, 2-5 years= £9.50, 5-8 years= £10.69, 6-24 months= £7.13, 8-11 years= £11.88, vest short sleeve large adult= £16.25, medium adult= £14.25, small adult= £12.50,

#### Comfifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

**Comfifast stockinette** (Synergy Health Plc) 10.75cm= £6.04, 17.5cm= £1.83, 3.5cm= £0.56, 5cm= £0.58, 7.5cm= £0.77

#### Comfifast Easywrap

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

**Comfifast Easywrap stockinette** (Synergy Health Plc) clava 5-14 years= £6.75, 6 months-5 years= £5.85, leggings 11-14 years= £11.88, 2-5 years= £9.50, 5-8 years= £10.69, 8-11 years= £11.88, mittens 2-8 years= £2.97, 8-14 years= £2.97, up to 24 months= £2.97, socks 8-14 years= £2.97, up to 8 years= £2.97, tights 6-24 months= £7.13, vest long sleeve 11-14 years= £11.88, 2-5 years= £9.50, 5-8 years= £10.69, 6-24 months= £7.13, 8-11 years= £11.88

#### Comfifast Multistretch

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

**Comfifast Multistretch 2-way stretch stockinette** (Synergy Health Plc) 10.75cm= £6.45, 17.5cm= £2.49, 3.5cm= £0.61, 5cm= £0.63, 7.5cm= £0.83

#### Coverflex

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

**Coverflex stockinette** (Paul Hartmann Ltd) 10.75cm= £9.59, 17.5cm= £2.53, 3.5cm= £0.83, 5cm= £0.86, 7.5cm= £5.68

#### Easifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

**Easifast stockinette** (Easigrip Ltd) 10.75cm= £7.23, 17.5cm= £1.91, 3.5cm= £0.65, 5cm= £0.69, 7.5cm= £0.94

#### Elasticated Surgical Tubular Stockinette, Foam padded or Tupipad

(Drug Tariff specification 25). Fabric as for Elasticated Tubular Bandage with polyurethane foam lining.

#### Elasticated Tubular Bandage, BP 1993

(Drug Tariff specification 25). Fabric as for Elasticated Tubular Bandage with polyurethane foam lining; lengths 50cm and 1m

**CLINIGrip bandage** (CliniSupplies Ltd) 10cm size F= £0.74, 12cm size G= £0.77, 6.25cm size B= £0.61, 6.75cm size C= £0.65, 7.5cm size D= £0.66, 8.75cm size E= £0.74

#### **Support bandages**

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

#### **CliniLite**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniLite bandage** (CliniSupplies Ltd) 10cm × 4.5m = £0.80, 15cm × 4.5m = £1.16, 5cm × 4.5m = £0.44, 7.5cm × 4.5m = £0.61

#### **CliniPlus**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**CliniPlus** (CliniSupplies Ltd) bandage 10cm × 8.7m = £1.80

#### **Cotton Crepe Bandage**

Light support bandage, 4.5 m stretched (all)

**Hospicrepe 239 Bandage** (Paul Hartmann Ltd) 10cm × 4.5m = £0.81, 15cm × 4.5m = £1.18, 5cm × 4.5m = £0.44, 7.5cm × 4.5m = £0.63

#### **Cotton Crepe Bandage, BP 1988**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

**Elastocrepe bandage** (BSN Medical Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Flexocrepe bandage** (Robinson Healthcare) 10cm × 4.5m, 7.5cm × 4.5m

**Sterocrepe bandage** (Steroplast Healthcare Ltd) 10cm × 4.5m, 7.5cm × 4.5m

**Cotton Suspensory Bandage**

(Drug Tariff). Type 1: cotton net bag with draw tapes and webbing waistband; small, medium, and large (all)

**Crepe Bandage, BP 1988**

Fabric, plain weave, warp of wool threads and crepe-twisted cotton threads, weft of cotton threads; stretch bandage; 4.5 m stretched

**Alvita crepe bandage** (Alliance Healthcare (Distribution) Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Clinicare bandage** (CliniSupplies Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Crepe bandage** (Robert Bailey & Son Plc) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Vernaid crepe bandage** (Synergy Health Plc) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Eiset**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Eiset** (Molnlycke Health Care Ltd) S bandage 15cm × 12m= £5.60, bandage 10cm × 6m= £2.61, 10cm × 8m= £3.34, 15cm × 6m= £2.80,

**Hospicrepe 233**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**Hospicrepe 233 bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.96, 15cm × 4.5m= £1.36, 5cm × 4.5m= £0.52, 7.5cm × 4.5m= £0.72

**Hospilite**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Hospilite bandage** (Paul Hartmann Ltd) 10cm × 4.5m= £0.62, 15cm × 4.5m= £0.91, 5cm × 4.5m= £0.37, 7.5cm × 4.5m= £0.51

**K-Lite**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Lite** (Urgo Ltd) Long bandage 10cm × 5.25m= £1.16, bandage 10cm × 4.5m= £1.01, 15cm × 4.5m= £1.46, 5cm × 4.5m= £0.55, 7cm × 4.5m= £0.77

**K-Plus**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**K-Plus** (Urgo Ltd) Long bandage 10cm × 10.25m= £2.65, bandage 10cm × 8.7m= £2.29

**Knit-Firm**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Knit-Firm bandage** (Millpledge Healthcare) 10cm × 4.5m= £0.66, 15cm × 4.5m= £0.96, 5cm × 4.5m= £0.36, 7cm × 4.5m= £0.51

**L3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**L3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.6m= £2.22

**Neosport**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Neosport bandage** (Neomedic Ltd) 10cm × 4.5m= £0.91, 15cm × 4.5m= £1.12, 5cm × 4.5m= £0.54, 7.5cm × 4.5m= £0.73

**PremierBand**

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton threads; stretch bandage, lighter than cotton crepe, 4.5 m stretched (all)

**PremierBand bandage** (Shermond) 10cm × 4.5m= £0.79, 15cm × 4.5m= £1.18, 5cm × 4.5m= £0.45, 7.5cm × 4.5m= £0.63

**Profore #2**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Profore #2** (Smith & Nephew Healthcare Ltd) bandage 10cm × 4.5m= £1.36, latex free bandage 10cm × 4.5m= £1.44

**Profore #3**

Knitted fabric, viscose and elastomer yarn. Type 2 (light support bandage)

**Profore #3** (Smith & Nephew Healthcare Ltd) bandage 10cm × 8.7m= £3.96, latex free bandage 10cm × 8.7m= £4.31

**Setocrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Setocrepe** (Molnlycke Health Care Ltd) bandage 10cm × 4.5m= £1.20

**Soffcrepe**

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)

**Soffcrepe bandage** (BSN medical Ltd) 10cm × 4.5m= £1.24, 15cm × 4.5m= £1.80, 5cm × 4.5m= £0.69, 7.5cm × 4.5m= £0.98

**Adhesive bandages**

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

**Elastic Adhesive Bandage, BP 1993**

Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched

**Tensoplast bandage** (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

**Cohesive bandages**

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

*Cohesive extensible bandages***Coban****Bandage**

**Coban** (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.93

**K Press****Bandage**

**K Press bandage** (Urgo Ltd) 10cm × 6.5m= £2.93, 10cm × 7.5m= £3.42, 12cm × 7.5m= £4.31, 8cm × 7.5cm= £3.22

**Profore #4****Bandage**

**Profore #4** (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.28, latex free bandage 10cm × 2.5m= £3.56

**Ultra Fast****Bandage**

**Ultra** (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.59

**Compression bandages**

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for

amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 222 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

#### High compression bandages

##### High Compression Bandage

Cotton, viscose, nylon, and Lycra® extensible bandage, 3m (unstretched)

**K-ThreeC** (Urgo Ltd) bandage 10cm × 3m= £2.85

**Velband** (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.73

#### Multi-layer compression bandaging

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

##### Profore

Multi-layer compression bandaging kit, four layer system  
**Profore** (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.00, multi-layer compression bandage kit= £5.52, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.22, multi-layer compression bandage kit 18cm-25cm ankle circumference= £9.57, 25cm-30cm ankle circumference= £7.94, above 30cm ankle circumference= £11.89, up to 18cm ankle circumference= £10.26

##### Ultra Four

Wound contact layer

##### Ultra Four

Multi-layer compression bandaging kit, four layer system  
**Ultra Four** (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit= £4.14, multi-layer compression bandage kit 18cm-25cm ankle circumference= £5.67, up to 18cm ankle circumference= £6.41

#### Two layer systems

##### Coban 2

Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)

**Coban 2** (3M Health Care Ltd) Lite multi-layer compression bandage kit= £8.24, multi-layer compression bandage kit= £8.24

##### K Two

Multi-layer compression bandaging kit, two layer system  
**UrgoKTwo** (Urgo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.68, 25cm-32cm ankle circumference= £9.48, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference= £8.18, 25cm-32cm ankle circumference= £8.93, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.68, 25cm-32cm ankle circumference= £9.48, multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.17, 25cm-32cm ankle circumference= £8.93, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference= £10.30, 25cm-32cm ankle circumference= £11.26, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference= £7.71, 25cm-32cm ankle circumference=

£8.39, multi-layer compression bandage kit size 0 short 18cm–25cm ankle circumference= £6.90, with UrgoStart multi-layer compression bandage kit 18cm–25cm ankle circumference= £10.19, 25cm–32cm ankle circumference= £10.86

#### Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

*Zipzoc*<sup>®</sup> can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

#### Zinc Paste Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging  
*Excipients: may include* cetostearyl alcohol, hydroxybenzoates

*Viscopaste* (Smith & Nephew Healthcare Ltd) PB7 bandage 7.5cm × 6m= £3.69

#### Zinc Paste and Ichthammol Bandage, BP 1993

Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging

*Excipients: may include* cetostearyl alcohol

*Ichthopaste* (Smith & Nephew Healthcare Ltd) bandage 7.5cm × 6m= £3.72

#### Medicated stocking

##### *Zipzoc*

Sterile rayon stocking impregnated with ointment containing zinc oxide 20%

*Zipzoc* (Smith & Nephew Healthcare Ltd) stockings= £31.26

### Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see table below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

*Graduated Compression hosiery, Class 1 Light Support* is used for superficial or early varices, varicosis during pregnancy.

*Graduated Compression hosiery, Class 2 Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

*Graduated Compression hosiery, Class 3 Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

#### Compression values for hosiery and lymphoedema garments

*Class 1:* Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class 2* Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class 3* Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class 4* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class 4 super* Compression hosiery (British

standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

#### Graduated compression hosiery

##### **Class 1 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

##### **Class 2 Light Support**

Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

#### Accessories

##### **Suspender**

Suspender, for thigh stockings

##### *Anklets*

##### **Class 2 Medium Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### **Class 3 Strong Support**

Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### *Knee caps*

##### **Class 2 Medium Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

##### **Class 3 Strong Support**

Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

#### Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note There are different compression values for lymphoedema garments and graduated compression hosiery, see above.

# Dental Practitioners' Formulary

## List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).

Licensed **sugar-free** versions, where available, are preferred.

Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP  
 Aciclovir Oral Suspension, BP, 200 mg/5 mL  
 Aciclovir Tablets, BP, 200 mg  
 Aciclovir Tablets, BP, 800 mg  
 Amoxicillin Capsules, BP  
 Amoxicillin Oral Powder, DPF  
 Amoxicillin Oral Suspension, BP  
 Artificial Saliva Gel, DPF  
 Artificial Saliva Oral Spray, DPF  
 Artificial Saliva Pastilles, DPF  
 Artificial Saliva Protective Spray, DPF  
 Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):  
*BioXtra*<sup>®</sup> Gel Mouthspray  
*BioXtra*<sup>®</sup> Moisturising Gel  
*Glandosane*<sup>®</sup>  
*Saliveze*<sup>®</sup>  
 Artificial Saliva Substitute Spray, DPF  
 Aspirin Tablets, Dispersible, BP  
 Azithromycin Capsules, 250 mg, DPF  
 Azithromycin Oral Suspension, 200 mg/5 mL, DPF  
 Azithromycin Tablets, 250 mg, DPF  
 Azithromycin Tablets, 500 mg, DPF  
 Beclomethasone Pressurised Inhalation, BP,  
 50 micrograms/metered inhalation, CFC-free, as:  
*Clenil Modulite*<sup>®</sup>  
 Benzylamine Mouthwash, BP 0.15%  
 Benzylamine Oromucosal Spray, BP 0.15%  
 Betamethasone Soluble Tablets, 500 micrograms, DPF  
 Carbamazepine Tablets, BP  
 Cefalexin Capsules, BP  
 Cefalexin Oral Suspension, BP  
 Cefalexin Tablets, BP  
 Cefradine Capsules, BP  
 Cetirizine Oral Solution, BP, 5 mg/5 mL  
 Cetirizine Tablets, BP, 10 mg  
 Chlorhexidine Gluconate Gel, BP  
 Chlorhexidine Mouthwash, BP  
 Chlorhexidine Oral Spray, DPF  
 Chlorphenamine Oral Solution, BP  
 Chlorphenamine Tablets, BP  
 Choline Salicylate Dental Gel, BP  
 Clarithromycin Oral Suspension, 125 mg/5 mL, DPF  
 Clarithromycin Oral Suspension, 250 mg/5 mL, DPF  
 Clarithromycin Tablets, BP  
 Clindamycin Capsules, BP  
 Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)  
 Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL  
 Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL  
 Diazepam Oral Solution, BP, 2 mg/5 mL

Diazepam Tablets, BP  
 Diclofenac Sodium Tablets, Gastro-resistant, BP  
 Dihydrocodeine Tablets, BP, 30 mg  
 Doxycycline Tablets, Dispersible, BP  
 Doxycycline Capsules, BP, 100 mg  
 Doxycycline Tablets, 20 mg, DPF  
 Ephedrine Nasal Drops, BP  
 Erythromycin Ethyl Succinate Oral Suspension, BP  
 Erythromycin Ethyl Succinate Tablets, BP  
 Erythromycin Stearate Tablets, BP  
 Erythromycin Tablets, Gastro-resistant, BP  
 Fluconazole Capsules, 50 mg, DPF  
 Fluconazole Oral Suspension, 50 mg/5 mL, DPF  
 Hydrocortisone Cream, BP, 1%  
 Hydrocortisone Oromucosal Tablets, BP  
 Hydrogen Peroxide Mouthwash, BP, 6%  
 Ibuprofen Oral Suspension, BP, sugar-free  
 Ibuprofen Tablets, BP  
 Lansoprazole Capsules, Gastro-resistant, BP  
 Lidocaine Ointment, BP, 5%  
 Lidocaine Spray 10%, DPF  
 Loratadine Syrup, 5 mg/5 mL, DPF  
 Loratadine Tablets, BP, 10 mg  
 Menthol and Eucalyptus Inhalation, BP 1980  
 Metronidazole Oral Suspension, BP  
 Metronidazole Tablets, BP  
 Miconazole Cream, BP  
 Miconazole Oromucosal Gel, BP  
 Miconazole and Hydrocortisone Cream, BP  
 Miconazole and Hydrocortisone Ointment, BP  
 Nystatin Oral Suspension, BP  
 Omeprazole Capsules, Gastro-resistant, BP  
 Oxytetracycline Tablets, BP  
 Paracetamol Oral Suspension, BP  
 Paracetamol Tablets, BP  
 Paracetamol Tablets, Soluble, BP  
 Phenoxymethylpenicillin Oral Solution, BP  
 Phenoxymethylpenicillin Tablets, BP  
 Promethazine Hydrochloride Tablets, BP  
 Promethazine Oral Solution, BP  
 Saliva Stimulating Tablets, DPF  
 Sodium Chloride Mouthwash, Compound, BP  
 Sodium Fluoride Mouthwash, BP  
 Sodium Fluoride Oral Drops, BP  
 Sodium Fluoride Tablets, BP  
 Sodium Fluoride Toothpaste 0.619%, DPF  
 Sodium Fluoride Toothpaste 1.1%, DPF  
 Sodium Fusidate Ointment, BP  
 Temazepam Oral Solution, BP  
 Temazepam Tablets, BP  
 Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations. For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

## Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF. Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

### Amoxicillin Oral Powder

amoxicillin (as trihydrate) 3 g sachet

**Artificial Saliva Gel**

(proprietary product: *Biotene Oralbalance*), lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

**Artificial Saliva Oral Spray**

(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

**Artificial Saliva Pastilles**

(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

**Artificial Saliva Protective Spray**

(proprietary product: *Aquoral*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

**Artificial Saliva Substitute Spray**

(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

**Azithromycin Capsules**

azithromycin 250 mg

**Azithromycin Oral Suspension 200 mg/5 mL**

azithromycin 200 mg/5 mL when reconstituted with water

**Azithromycin Tablets**

azithromycin 250 mg and 500 mg

**Betamethasone Soluble Tablets 500 micrograms**

betamethasone (as sodium phosphate) 500 micrograms

**Chlorhexidine Oral Spray**

(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

**Clarithromycin Oral Suspension 125 mg/5 mL**

clarithromycin 125 mg/5 mL when reconstituted with water

**Clarithromycin Oral Suspension 250 mg/5 mL**

clarithromycin 250 mg/5 mL when reconstituted with water

**Doxycycline Tablets 20 mg**

(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

**Fluconazole Capsules 50 mg**

fluconazole 50 mg

**Fluconazole Oral Suspension 50 mg/5 mL**

(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

**Lidocaine Spray 10%**

(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

**Loratadine Syrup 5 mg/5 mL**

loratadine 5 mg/5 mL

**Saliva Stimulating Tablets**

(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

**Sodium Fluoride Toothpaste 0.619%**

(proprietary product: *Duraphat '2800 ppm' Toothpaste*), sodium fluoride 0.619%

**Sodium Fluoride Toothpaste 1.1%**

(proprietary product: *Duraphat '5000 ppm' Toothpaste*), sodium fluoride 1.1%

# Nurse Prescribers' Formulary

## Nurse Prescribers' Formulary for Community Practitioners

List of preparations approved by the Secretary of State which may be prescribed on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales) by Nurses for National Health Service patients.

Community practitioners who have completed the necessary training may only prescribe items appearing in the nurse prescribers' list set out below. Community Practitioner Nurse Prescribers are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved generic name.

## Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

Almond Oil Ear Drops, BP  
 Arachis Oil Enema, NPF  
 Aspirin Tablets, Dispersible, 300 mg, BP (max. 96 tablets; max. pack size 32 tablets)  
 Bisacodyl Suppositories, BP (includes 5-mg and 10-mg strengths)  
 Bisacodyl Tablets, BP  
 Catheter Maintenance Solution, Sodium Chloride, NPF  
 Catheter Maintenance Solution, 'Solution G', NPF  
 Catheter Maintenance Solution, 'Solution R', NPF  
 Chlorhexidine Gluconate Alcoholic Solutions containing at least 0.05%  
 Chlorhexidine Gluconate Aqueous Solutions containing at least 0.05%  
 Choline Salicylate Dental Gel, BP  
 Clotrimazole Cream 1%, BP  
 Co-danthramer Capsules, NPF  
 Co-danthramer Capsules, Strong, NPF  
 Co-danthramer Oral Suspension, NPF  
 Co-danthramer Oral Suspension, Strong, NPF  
 Co-danthrusate Capsules, BP  
 Co-danthrusate Oral Suspension, NPF  
 Crotramiton Cream, BP  
 Crotramiton Lotion, BP  
 Dimeticone barrier creams containing at least 10%  
 Dimeticone Lotion, NPF  
 Docusate Capsules, BP  
 Docusate Enema, NPF  
 Docusate Oral Solution, BP  
 Docusate Oral Solution, Paediatric, BP  
 Econazole Cream 1%, BP  
 Emollients as listed below:  
 Aquadrate<sup>®</sup> 10% w/w Cream  
 Arachis Oil, BP  
 Balneum<sup>®</sup> Plus Cream  
 Cetra<sup>®</sup> Emollient Cream  
 Dermamist<sup>®</sup>  
 Diprob<sup>®</sup> Cream  
 Diprob<sup>®</sup> Ointment  
 Doublebase<sup>®</sup>  
 Doublebase<sup>®</sup> Dayleve Gel  
 E45<sup>®</sup> Cream  
 E45<sup>®</sup> Itch Relief Cream  
 Emulsifying Ointment, BP  
 Eucerin<sup>®</sup> Intensive 10% w/w Urea Treatment Cream  
 Eucerin<sup>®</sup> Intensive 10% w/w Urea Treatment Lotion  
 Hydromol<sup>®</sup> Cream

Hydromol<sup>®</sup> Intensive  
 Hydrous Ointment, BP  
 Lipobase<sup>®</sup>  
 Liquid and White Soft Paraffin Ointment, NPF  
 Neutrogena<sup>®</sup> Norwegian Formula Dermatological Cream  
 Nutraplus<sup>®</sup> Cream  
 Oilatum<sup>®</sup> Cream  
 Oilatum<sup>®</sup> Junior Cream  
 Paraffin, White Soft, BP  
 Paraffin, Yellow Soft, BP  
 Ultrabase<sup>®</sup>  
 Unguentum M<sup>®</sup>  
 Emollient Bath and Shower Preparations as listed below:  
 Aqueous Cream, BP  
 Balneum<sup>®</sup> (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))  
 Balneum Plus<sup>®</sup> Bath Oil (except pack sizes that are not to be prescribed under the NHS (see Part XVIII A of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))  
 Cetra<sup>®</sup> Emollient Bath Additive  
 Dermal<sup>®</sup> Bath Emollient  
 Doublebase<sup>®</sup> Emollient Bath Additive  
 Doublebase<sup>®</sup> Emollient Shower Gel  
 Doublebase<sup>®</sup> Emollient Wash Gel  
 Hydromol<sup>®</sup> Bath and Shower Emollient  
 Oilatum<sup>®</sup> Emollient  
 Oilatum<sup>®</sup> Gel  
 Oilatum<sup>®</sup> Junior Bath Additive  
 Zerolatum<sup>®</sup> Emollient Medicinal Bath Oil  
 Folic Acid Tablets 400 micrograms, BP  
 Glycerol Suppositories, BP  
 Ibuprofen Oral Suspension, BP (except for indications and doses that are prescription-only)  
 Ibuprofen Tablets, BP (except for indications and doses that are prescription-only)  
 Ispaghula Husk Granules, BP  
 Ispaghula Husk Granules, Effervescent, BP  
 Ispaghula Husk Oral Powder, BP  
 Lactulose Solution, BP  
 Lidocaine Ointment, BP  
 Lidocaine and Chlorhexidine Gel, BP  
 Macrogol Oral Liquid, Compound, NPF  
 Macrogol Oral Powder, Compound, NPF  
 Macrogol Oral Powder, Compound, Half-strength, NPF  
 Magnesium Hydroxide Mixture, BP  
 Magnesium Sulfate Paste, BP  
 Malathion aqueous lotions containing at least 0.5%  
 Mebendazole Oral Suspension, NPF  
 Mebendazole Tablets, NPF  
 Methylcellulose Tablets, BP  
 Miconazole Cream 2%, BP  
 Miconazole Oromucosal Gel, BP  
 Mouthwash Solution-tablets, NPF  
 Nicotine Inhalation Cartridge for Oromucosal Use, NPF  
 Nicotine Lozenge, NPF  
 Nicotine Medicated Chewing Gum, NPF  
 Nicotine Nasal Spray, NPF  
 Nicotine Oral Spray, NPF  
 Nicotine Sublingual Tablets, NPF  
 Nicotine Transdermal Patches, NPF  
 Nystatin Oral Suspension, BP  
 Olive Oil Ear Drops, BP  
 Paracetamol Oral Suspension, BP (includes 120 mg/5 mL and 250 mg/5 mL strengths—both of which are available as sugar-free formulations)

Paracetamol Tablets, BP (max. 96 tablets; max. pack size 32 tablets)  
 Paracetamol Tablets, Soluble, BP (includes 120-mg and 500-mg tablets; max. 96 tablets; max. pack size 32 tablets)  
 Permethrin Cream, NPF  
 Phosphates Enema, BP  
 Povidone–Iodine Solution, BP  
 Senna Oral Solution, NPF  
 Senna Tablets, BP  
 Senna and Ispaghula Granules, NPF  
 Sodium Chloride Solution, Sterile, BP  
 Sodium Citrate Compound Enema, NPF  
 Sodium Picosulfate Capsules, NPF  
 Sodium Picosulfate Elixir, NPF  
 Spermicidal contraceptives as listed below:  
   Gygel® Contraceptive Jelly  
 Sterculia Granules, NPF  
 Sterculia and Frangula Granules, NPF  
 Titanium Ointment, BP  
 Water for Injections, BP  
 Zinc and Castor Oil Ointment, BP  
 Zinc Oxide and Dimeticone Spray, NPF  
 Zinc Oxide Impregnated Medicated Bandage, NPF  
 Zinc Oxide Impregnated Medicated Stocking, NPF  
 Zinc Paste Bandage, BP 1993  
 Zinc Paste and Ichthammol Bandage, BP 1993

## Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated Nx.

**Appliances** (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

**Incontinence Appliances** as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

**Stoma Appliances and Associated Products** as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

**Chemical Reagents** as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:  
 National Health Service Drug Tariff for England and Wales: [www.ppa.org.uk/ppa/edt\\_intro.htm](http://www.ppa.org.uk/ppa/edt_intro.htm)  
 Health and Personal Social Services for Northern Ireland Drug Tariff: [www.hscbusiness.hscni.net/services/2034.htm](http://www.hscbusiness.hscni.net/services/2034.htm)  
 Scottish Drug Tariff: [www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/](http://www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/)

## Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

### Arachis Oil Enema

arachis oil 100%

### Catheter Maintenance Solution, Sodium Chloride

(proprietary products: *OptiFlo S*; *Uro-Tainer Sodium Chloride*; *Uriflex-S*), sodium chloride 0.9%

### Catheter Maintenance Solution, 'Solution G'

(proprietary products: *OptiFlo G*; *Uro-Tainer Suby G*; *Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%

### Catheter Maintenance Solution, 'Solution R'

(proprietary products: *OptiFlo R*; *Uro-Tainer Solution R*; *Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%

### Chlorhexidine gluconate alcoholic solutions

(proprietary products: *ChloraPrep*; *Hydrex Solution*; *Hydrex spray*), chlorhexidine gluconate in alcoholic solution

### Chlorhexidine gluconate aqueous solutions

(proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution

### Co-danthramer Capsules <sup>[PoM]</sup>

co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)

### Co-danthramer Capsules, Strong <sup>[PoM]</sup>

co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)

### Co-danthramer Oral Suspension <sup>[PoM]</sup>

(proprietary product: *Codalax*), co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)

### Co-danthramer Oral Suspension, Strong <sup>[PoM]</sup>

(proprietary product: *Codalax Forte*), co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)

### Co-danthrusate Oral Suspension <sup>[PoM]</sup>

(proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)

### Dimeticone barrier creams

(proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%

### Dimeticone Lotion

(proprietary product: *Hedrin*), dimeticone 4%

### Docusate Enema

(proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g

### Liquid and White Soft Paraffin Ointment

liquid paraffin 50%, white soft paraffin 50%

### Macrogol Oral Liquid, Compound

(proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL

### Macrogol Oral Powder, Compound

(proprietary products: *Laxido Orange*, *Molaxole*, *Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K<sup>+</sup> 5.4 mmol/litre)

### Macrogol Oral Powder, Compound, Half-strength

(proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet

### Malathion aqueous lotions

(proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis

### Mebendazole Oral Suspension <sup>[PoM]</sup>

(proprietary product: *Vermox*), mebendazole 100 mg/5 mL

**Mebendazole Tablets** [POM]

(proprietary products: *Ovex*, *Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)

**Mouthwash Solution-tablets**

consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash

**Nicotine Inhalation Cartridge for Oromucosal Use**

(proprietary products: *NicAssist Inhalator*, *Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device))

**Nicotine Lozenge**

nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge*, *Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges*, *NiQuitin Minis*, *NiQuitin Pre-quit*)

**Nicotine Medicated Chewing Gum**

(proprietary products: *NicAssist Gum*, *Nicorette Gum*, *Nicotinell Gum*, *NiQuitin Gum*), nicotine 2 mg or 4 mg

**Nicotine Nasal Spray**

(proprietary product: *NicAssist Nasal Spray*, *Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray

**Nicotine Oral Spray**

(proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray

**Nicotine Sublingual Tablets**

(proprietary product: *NicAssist Microtab*, *Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))

**Nicotine Transdermal Patches**

releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch*, *Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch*, *Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch*, *Nicotinell TTS*, *NiQuitin*, *NiQuitin Clear*) (prescriber should specify the brand to be dispensed)

**Permethrin Cream**

(proprietary product: *Lyclear Dermal Cream*), permethrin 5%

**Senna Oral Solution**

(proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL

**Senna and Ispaghula Granules**

(proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%

**Sodium Citrate Compound Enema**

(proprietary products: *Micolette Micro-enema*; *Micalax Micro-enema*; *Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant

**Sodium Picosulfate Capsules**

(proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg

**Sodium Picosulfate Elixir**

(proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL

**Sterculia Granules**

(proprietary product: *Normacol Granules*), sterculia 62%

**Sterculia and Frangula Granules**

(proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%

**Zinc Oxide and Dimeticone Spray**

(proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit

**Zinc Oxide Impregnated Medicated Bandage**

(proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%

**Zinc Oxide Impregnated Medicated Stocking**

(proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

# Non-medical prescribing

## Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at [www.dh.gov.uk/health/2012/04/prescribing-change](http://www.dh.gov.uk/health/2012/04/prescribing-change).

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice—responding to legislative changes*, National Prescribing Centre, May 2010 (available at [www.npc.nhs.uk/improving\\_safety/mixing\\_meds/resources/mixing\\_of\\_medicines.pdf](http://www.npc.nhs.uk/improving_safety/mixing_meds/resources/mixing_of_medicines.pdf)).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

## Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Nurse Prescribers' Formulary p. 1413 for Community Practitioners provides information on prescribing.

## Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

## Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

# Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at [tinyurl.com/cdsslke](http://tinyurl.com/cdsslke).

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; [www.pro-file.nhs.uk](http://www.pro-file.nhs.uk)) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies ([www.apsm-uk.com](http://www.apsm-uk.com)).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

## England

### London

#### Barts and the London NHS Trust

Mr J. A. Rickard, Head of Barts Health Pharmaceuticals  
Barts Health NHS Trust  
The Royal London Hospital  
Pathology and Pharmacy Building  
80 Newark St  
Whitechapel  
London

COMMISSION ON HUMAN MEDICINES (CHM)

It's easy to report online at:  
[www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)**REPORT OF SUSPECTED ADVERSE DRUG REACTIONS**

If you suspect an adverse reaction may be related to one or more drugs/vaccines/complementary remedies, please complete this Yellow Card. See 'Adverse reactions to drugs' section in BNF or [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard) for guidance. Do not be put off reporting because some details are not known.

**PATIENT DETAILS** Patient Initials: \_\_\_\_\_ Sex: M / F Is the patient pregnant? Y / N Ethnicity: \_\_\_\_\_  
Age (at time of reaction): \_\_\_\_\_ Weight (kg): \_\_\_\_\_ Identification number (e.g. Practice or Hospital Ref): \_\_\_\_\_

**SUSPECTED DRUG(S)/VACCINE(S)**

| Drug/Vaccine (Brand if known) | Batch | Route | Dosage | Date started | Date stopped | Prescribed for |
|-------------------------------|-------|-------|--------|--------------|--------------|----------------|
| _____                         | _____ | _____ | _____  | _____        | _____        | _____          |
| _____                         | _____ | _____ | _____  | _____        | _____        | _____          |

**SUSPECTED REACTION(S)** Please describe the reaction(s) and any treatment given. (Please attach additional pages if necessary):**Outcome**

Recovered   
Recovering   
Continuing   
Other

Date reaction(s) started: \_\_\_\_\_ Date reaction(s) stopped: \_\_\_\_\_

Do you consider the reactions to be serious? Yes / No

If yes, please indicate why the reaction is considered to be serious (please tick all that apply):

Patient died due to reaction  Involved or prolonged inpatient hospitalisation  
 Life threatening  Involved persistent or significant disability or incapacity  
 Congenital abnormality  Medically significant; please give details: \_\_\_\_\_

If the reactions were not serious according to the categories above, how bad was the suspected reaction?

Mild  Unpleasant, but did not affect everyday activities  Bad enough to affect everyday activities

It's easy to report online: [www.mhra.gov.uk/yellowcard](http://www.mhra.gov.uk/yellowcard)

**OTHER DRUG(S) (including self-medication and complementary remedies)**

Did the patient take any other medicines/vaccines/complementary remedies in the last 3 months prior to the reaction? Yes / No

If yes, please give the following information if known:

| Drug/Vaccine (Brand if known) | Batch | Route | Dosage | Date started | Date stopped | Prescribed for |
|-------------------------------|-------|-------|--------|--------------|--------------|----------------|
| _____                         | _____ | _____ | _____  | _____        | _____        | _____          |
| _____                         | _____ | _____ | _____  | _____        | _____        | _____          |
| _____                         | _____ | _____ | _____  | _____        | _____        | _____          |

**Additional relevant information** e.g. medical history, test results, known allergies, rechallenge (if performed). For reactions relating to use of a medicine during pregnancy please state all other drugs taken during pregnancy, the last menstrual period, information on previous pregnancies, ultrasound scans, any delivery complications, birth defects or developmental concerns.

Please list any medicines obtained from the internet:

# Adult Advanced Life Support Algorithm

Resuscitation Council (UK)

Adult Advanced Life Support

- During CPR**
- Ensure high quality chest compressions
  - Minimise interruptions to compressions
  - Give oxygen
  - Use waveform capnography
  - Continuous compressions when advanced airway in place
  - Vascular access (intravenous or intraosseous)
  - Give adrenaline every 3-5 min
  - Give amiodarone after 3 shocks

- Treat Reversible Causes**
- Hypoxia
  - Hypovolaemia
  - Hypo-/hyperkalaemia/metabolic
  - Hypothermia
  - Thrombosis - coronary or pulmonary
  - Tension pneumothorax
  - Tamponade – cardiac
  - Toxins

- Consider**
- Ultrasound imaging
  - Mechanical chest compressions to facilitate transfer/treatment
  - Coronary angiography and percutaneous coronary intervention
  - Extracorporeal CPR

# Medical emergencies in the community

## Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals. Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

## Acute coronary syndromes

### ▶ **ANGINA: UNSTABLE**

**Aspirin dispersible tablets p. 114** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

### ▶ **PLUS**

### ▶ **EITHER Glyceryl trinitrate aerosol spray p. 207**

(400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

### ▶ **OR Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

### ▶ **MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION**

Treat as for Angina: unstable

### ▶ **MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION**

**Aspirin dispersible tablets** (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

▶ Adult: 300 mg

**Glyceryl trinitrate aerosol spray** (400 micrograms/metered dose)

SUBLINGUALLY

▶ Adult: 1–2 sprays, repeated as required

### ▶ **OR Glyceryl trinitrate tablets** (300 micrograms,

500 micrograms, 600 micrograms)

SUBLINGUALLY

▶ Adult: 0.3–1 mg, repeated as required

**Metoclopramide hydrochloride injection p. 403** (5 mg/mL)

BY INTRAVENOUS INJECTION

▶ Adult 18–19 years (body-weight up to 60 kg): 5 mg

▶ Adult 18–19 years (body-weight 60 kg and over): 10 mg

▶ Adult over 19 years: 10 mg

**Diamorphine hydrochloride injection p. 423** (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1–2 mg/minute)

▶ Adult: 5 mg followed by a further 2.5–5 mg if necessary

▶ Elderly or frail patients: reduce dose by half

### ▶ **OR Morphine sulfate injection p. 429** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1–2 MG/MINUTE)

▶ Adult: 5–10 mg followed by a further 5–10 mg if necessary

▶ Elderly or frail patients: reduce dose by half

**Oxygen**, if appropriate

## Airways disease, obstructive

### ▶ **ASTHMA: ACUTE**

Regard each emergency consultation as being for **severe acute asthma** until shown otherwise; failure to respond adequately **at any time** requires immediate transfer to hospital

### ▶ **EITHER Salbutamol aerosol inhaler p. 239**

(100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER

(AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

▶ Adult and Child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

### ▶ **OR Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 2.5–5 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 5 mg every 20–30 minutes or as necessary

▶ Adult: 5 mg every 20–30 minutes or as necessary

### ▶ **OR Terbutaline sulfate nebuliser solution p. 241** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

▶ Child 4 years and below: 5 mg every 20–30 minutes or as necessary

▶ Child 5–11 years: 5–10 mg every 20–30 minutes or as necessary

▶ Child 12–17 years: 10 mg every 20–30 minutes or as necessary

▶ Adult: 10 mg every 20–30 minutes or as necessary

### ▶ **PLUS (in all cases)**

### ▶ **EITHER Prednisolone tablets p. 622 (or prednisolone soluble tablets)** (5 mg)

BY MOUTH

▶ Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily

▶ Child 12–17 years: 40–50 mg once daily for at least 5 days

▶ Adult: 40–50 mg once daily for at least 5 days

### ▶ **OR Hydrocortisone p. 620 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

▶ Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:

▶ Child 1 year and below: 25 mg

▶ Child 2–4 years: 50 mg

▶ Child 5–17 years: 100 mg

▶ Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

High-flow **oxygen** should be given if available (via face mask in children)

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta<sub>2</sub> agonist** (as above) and give with

### **Ipratropium bromide nebuliser solution p. 234**

(250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- ▶ Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- ▶ Child 12–17 years: 500 micrograms every 4–6 hours as necessary
- ▶ Adult: 500 micrograms every 4–6 hours as necessary

### ▶ **CROUP**

#### **Dexamethasone oral solution p. 618** (2 mg/5 mL)

BY MOUTH

- ▶ Child 1 month–2 years: 150 micrograms/kg as a single dose

---

## **Anaphylaxis**

### ▶ **ANAPHYLAXIS**

#### **Adrenaline/epinephrine injection p. 211** (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- ▶ Child 5 years and below: 150 micrograms (0.15 mL), repeated every 5 minutes if necessary
- ▶ Child 6–11 years: 300 micrograms (0.3 mL), repeated every 5 minutes if necessary
- ▶ Child 12–17 years: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- ▶ Adult: 500 micrograms (0.5 mL), repeated every 5 minutes if necessary

High-flow **oxygen** and **intravenous fluids** should be given as soon as available.

#### **Chlorphenamine maleate injection p. 266**

BY INTRAMUSCULAR OR INTRAVENOUS INJECTION

May help counter histamine-mediated vasodilation and bronchoconstriction.

#### **Hydrocortisone (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

Has delayed action but should be given to severely affected patients to prevent further deterioration.

---

## **Bacterial infection**

### ▶ **MENINGOCOCCAL DISEASE**

#### **Benzylpenicillin sodium injection p. 504** (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 300 mg
- ▶ Child 1 month–11 months: 300 mg
- ▶ Child 1–9 years: 600 mg
- ▶ Child 10–17 years: 1.2 g
- ▶ Adult: 1.2 g

**NOTE** A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

### ▶ **OR if history of allergy to penicillin**

#### **Cefotaxime injection p. 487** (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- ▶ Neonate: 50 mg/kg
- ▶ Child 1 month–11 years: 50 mg/kg (max. 1 g)
- ▶ Child 12–17 years: 1 g
- ▶ Adult: 1 g

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

- ▶ **OR if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

#### **Chloramphenicol injection p. 524** (1 g)

BY INTRAVENOUS INJECTION

- ▶ Child: 12.5–25 mg/kg
- ▶ Adult: 12.5–25 mg/kg

**NOTE** A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, bacterial p. 473.

---

## **Hypoglycaemia**

### ▶ **DIABETIC HYPOGLYCAEMIA**

#### **Glucose or sucrose**

BY MOUTH

- ▶ Adult and child over 2 years: approx. 10–20 g (55–110 mL *Lucozade*<sup>®</sup> *Energy Original* or 100–200 mL *Coca-Cola*<sup>®</sup> – both non-diet versions or 2–4 teaspoonfuls of sugar or 3–6 sugar lumps) repeated after 10–15 minutes if necessary

- ▶ **OR if hypoglycaemia unresponsive or if oral route cannot be used**

#### **Glucagon injection p. 660** (1 mg/mL)

BY SUBCUTANEOUS OR INTRAMUSCULAR INJECTION

- ▶ Child body-weight up to 25 kg: 500 micrograms (0.5 mL)
- ▶ Child body-weight 25 kg and over: 1 mg (1 mL)
- ▶ Adult: 1 mg (1 mL)

- ▶ **OR if hypoglycaemia prolonged or unresponsive to glucagon after 10 minutes**

#### **Glucose intravenous infusion p. 915** (10%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Child: 5 mL/kg (glucose 500 mg/kg)

#### **Glucose intravenous infusion p. 915** (20%)

BY INTRAVENOUS INJECTION INTO LARGE VEIN

- ▶ Adult: 50 mL

---

## **Seizures**

- ▶ **CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES**

- ▶ **EITHER Diazepam rectal solution p. 321** (2 mg/mL, 4 mg/mL)

BY RECTUM

- ▶ Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 1 month–1 year: 5 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 2–11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- ▶ Child 12–17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- ▶ Elderly: 10 mg, repeated once after 10–15 minutes if necessary

- ▶ **OR Midazolam oromucosal solution p. 318**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY

- ▶ Neonate: 300 micrograms/kg [unlicensed]
- ▶ Child 1–2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- ▶ Child 3 months–11 months: 2.5 mg
- ▶ Child 1–4 years: 5 mg
- ▶ Child 5–9 years: 7.5 mg
- ▶ Child 10–17 years: 10 mg
- ▶ Adult: 10 mg [unlicensed]

# Approximate Conversions and Units

## Conversion of pounds to kilograms

| lb | kg   |
|----|------|
| 1  | 0.45 |
| 2  | 0.91 |
| 3  | 1.36 |
| 4  | 1.81 |
| 5  | 2.27 |
| 6  | 2.72 |
| 7  | 3.18 |
| 8  | 3.63 |
| 9  | 4.08 |
| 10 | 4.54 |
| 11 | 4.99 |
| 12 | 5.44 |
| 13 | 5.90 |
| 14 | 6.35 |

## Conversion of stones to kilograms

| stones | kg    |
|--------|-------|
| 1      | 6.35  |
| 2      | 12.70 |
| 3      | 19.05 |
| 4      | 25.40 |
| 5      | 31.75 |
| 6      | 38.10 |
| 7      | 44.45 |
| 8      | 50.80 |
| 9      | 57.15 |
| 10     | 63.50 |
| 11     | 69.85 |
| 12     | 76.20 |
| 13     | 82.55 |
| 14     | 88.90 |
| 15     | 95.25 |

## Conversion from millilitres to fluid ounces

| mL   | fl oz |
|------|-------|
| 50   | 1.8   |
| 100  | 3.5   |
| 150  | 5.3   |
| 200  | 7.0   |
| 500  | 17.6  |
| 1000 | 35.2  |

## Length

1 metre (m) = 1000 millimetres (mm)  
 1 centimetre (cm) = 10 mm  
 1 inch (in) = 25.4 mm  
 1 foot (ft) = 12 inches  
 12 inches = 304.8 mm

## Mass

1 kilogram (kg) = 1000 grams (g)  
 1 gram (g) = 1000 milligrams (mg)  
 1 milligram (mg) = 1000 micrograms  
 1 microgram = 1000 nanograms  
 1 nanogram = 1000 picograms

## Volume

1 litre = 1000 millilitres (mL)  
 1 millilitre (1 mL) = 1000 microlitres  
 1 pint ≈ 568 mL

## Other units

1 kilocalorie (kcal) = 4186.8 joules (J)  
 1000 kilocalories (kcal) = 4.1868 megajoules (MJ)  
 1 megajoule (MJ) = 238.8 kilocalories (kcal)  
 1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)  
 1 kilopascal (kPa) = 7.5 mmHg (pressure)

## Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

## Prescribing for children: weight, height, and gender

The table below shows the **mean values** for weight, height, and gender by age; these values have been derived from the UK-WHO growth charts 2009 and UK1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

| Age               | Weight (kg) | Height (cm) |
|-------------------|-------------|-------------|
| Full-term neonate | 3.5         | 51          |
| 1 month           | 4.3         | 55          |
| 2 months          | 5.4         | 58          |
| 3 months          | 6.1         | 61          |
| 4 months          | 6.7         | 63          |
| 6 months          | 7.6         | 67          |
| 1 year            | 9           | 75          |
| 3 years           | 14          | 96          |

# Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1383

- 1** Warning: This medicine may make you sleepy
- 2** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol
- 3** Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines
- 4** Warning: Do not drink alcohol
- 5** Do not take indigestion remedies 2 hours before or after you take this medicine
- 6** Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 7** Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine
- 8** Warning: Do not stop taking this medicine unless your doctor tells you to stop
- 9** Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop
- 10** Warning: Read the additional information given with this medicine
- 11** Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds
- 12** Do not take anything containing aspirin while taking this medicine
- 13** Dissolve or mix with water before taking
- 14** This medicine may colour your urine. This is harmless
- 15** Caution: flammable. Keep your body away from fire or flames after you have put on the medicine
- 16** Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening
- 17** Do not take more than... in 24 hours
- 18** Do not take more than... in 24 hours. Also, do not take more than... in any one week
- 19** Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol
- 21** Take with or just after food, or a meal
- 22** Take 30 to 60 minutes before food
- 23** Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food
- 24** Suck or chew this medicine
- 25** Swallow this medicine whole. Do not chew or crush
- 26** Dissolve this medicine under your tongue
- 27** Take with a full glass of water
- 28** Spread thinly on the affected skin only
- 29** Do not take more than 2 at any one time. Do not take more than 8 in 24 hours
- 30** Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well
- 32** Contains aspirin. Do not take anything else containing aspirin while taking this medicine

**Ⓢ to Ⓢ** symbols will be displayed – grades reflect the strengths of recommendations in evidence graded content, *see* How BNF Publications are constructed p. ix

## Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

|                 |  |
|-----------------|--|
| <b>a. c.</b>    | = ante cibum (before food)                           |
| <b>b. d.</b>    | = bis die (twice daily)                              |
| <b>o. d.</b>    | = omni die (every day)                               |
| <b>o. m.</b>    | = omni mane (every morning)                          |
| <b>o. n.</b>    | = omni nocte (every night)                           |
| <b>p. c.</b>    | = post cibum (after food)                            |
| <b>p. r. n.</b> | = pro re nata (when required)                        |
| <b>q. d. s.</b> | = quater die sumendum (to be taken four times daily) |
| <b>q. q. h.</b> | = quarta quaque hora (every four hours)              |
| <b>stat</b>     | = immediately  |
| <b>t. d. s.</b> | = ter die sumendum (to be taken three times daily)   |
| <b>t.i.d.</b>   | = ter in die (three times daily)                     |

## E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

|       |                              |
|-------|------------------------------|
| E102  | Tartrazine                   |
| E211  | Sodium Benzoate              |
| E104  | Quinoline Yellow             |
| E223  | Sodium Metabisulfite         |
| E110  | Sunset Yellow FCF            |
| E320  | Butylated Hydroxyanisole     |
| E123  | Amaranth                     |
| E321  | Butylated Hydroxytoluene     |
| E124  | Ponceau 4R                   |
| E322  | Lecithins                    |
| E127  | Erythrosine BS               |
| E420  | Sorbitol                     |
| E132  | Indigo Carmine               |
| E421  | Mannitol                     |
| E142  | Green 5                      |
| E422  | Glycerol                     |
| E171  | Titanium Dioxide             |
| E901  | Beeswax (white and yellow)   |
| E172  | Iron oxides, iron hydroxides |
| E1520 | Propylene Glycol             |
| E200  | Sorbic Acid                  |
